## EXHIBIT

Exhibit

Description of Exhibit

---

- 99.1 Barrick Gold Corporation Year-End Report for 2006, including the Comparative Unaudited Financial Statements prepared in accordance with U.S. generally accepted accounting principles ("US GAAP") and the notes thereto for the year ended December 31, 2006 and Management's Discussion and Analysis (US GAAP) for the same period.

## YEAR-END REPORT 2006 — FEBRUARY 22, 2007

Based on US GAAP and expressed in US dollars

**For a full explanation of results, the Financial Statements and Management Discussion & Analysis, reserves & resources and mine statistics, please see the Company's website, [www.barrick.com](http://www.barrick.com).**

### **Barrick Earns \$1.5 Billion (\$1.77 per share) in 2006**

Operating Cash Flow Exceeds \$2.1 Billion (\$2.48 per share)

#### **Highlights**

- 2006 net income was \$1.51 billion (\$1.77 per share) and operating cash flow was \$2.12 billion (\$2.48 per share), both Company records, and representing year over year growth of 136% and 84% in EPS and CFPS, respectively.
- Q4 net income was \$418 million (\$0.48 per share) and operating cash flow was \$337 million (\$0.38 per share) on gold sales of 2.3 million ounces at total cash costs of \$287 per ounce <sup>1</sup>. Operating cash flow was reduced by \$327 million (\$0.37 per share) as a result of a voluntary gold hedge reduction of 1 million ounces.
- Full year production was 8.64 million ounces of gold at total cash costs of \$282 per ounce and 367 million pounds of copper at total cash costs of \$0.79 per pound <sup>1</sup>. This was the fourth consecutive year that Barrick met its original production and cash cost guidance despite continued production and cost pressures in the mining industry.
- Gold reserves as at December 31, 2006, based on \$475 gold price, were 123 million ounces <sup>2</sup>, the highest in the industry.
- Fixed price corporate gold sales contracts have been completely eliminated as of February 21, 2007.
- Sale of South Deep Mine closed for proceeds of \$1.5 billion and gain on sale of \$288 million.
- Pascua-Lama project received environmental approval from Argentina in December.

Barrick Gold Corporation today reported record yearly financial results with net income of \$1.51 billion (\$1.77 per share) and operating cash flow of \$2.12 billion (\$2.48 per share) for 2006. Earnings and cash flow per share rose 136% and 84%, respectively, over 2005 levels of \$0.75 and \$1.35 per share. 2006 earnings were reduced by \$211 million post-tax (\$0.25 per share) of special items, (see page 18 of Management's Discussion and Analysis for further details).

Fourth quarter 2006 earnings were \$418 million (\$0.48 per share) compared to earnings of \$175 million (\$0.32 per share) in the year-earlier period. Q4 2006 earnings were reduced by \$28 million (\$0.03 per share) of special items.

Operating cash flow for fourth quarter 2006 was \$337 million (\$0.38 per share) compared to \$269 million (\$0.50 per share) in the year-earlier period, due to increased production and higher gold prices, offset by

<sup>1</sup> Total cash costs is defined as cost of sales divided by ounces of gold sold or pounds of copper sold. Total cash cost exclude amortization expense and inventory purchase accounting adjustments. For further information on this performance measure see pages 31 to 32 of the Company's MD&A.

<sup>2</sup> Calculated in accordance with National Instrument 43-101 as required by Canadian securities regulatory authorities. For United States reporting purposes, Industry Guide 7 (under the Securities Exchange Act of 1934), as interpreted by the Staff of the SEC, applies different standards in order to classify mineralization as a reserve. Accordingly, for U.S. reporting purposes, 1.88 million ounces of the Cortez reserve, Buzwagi and Pueblo Viejo are classified as mineralized material. For a breakdown of reserves and resources by category and additional information relating to reserves and resources, see pages 111-116 of Barrick's 2006 Year-End Report.

the voluntary delivery of 1.0 million ounces of Corporate Gold Sales Contracts resulting in a reduction of operating cash flow of \$327 million (\$0.37 per share).

For the year, the Company's results benefited from a 58% increase in gold production, a 23% higher realized gold price, and strong financial results from its copper mines.

"2006 was a banner year for Barrick. We saw payback from our activities of the last few years, in particular the Placer Dome acquisition, and a full year's production from the new generation of mines translate into record financial results," said Greg Wilkins, President and CEO. "Looking forward, the Company is well positioned and leveraged to benefit in a rising gold price environment."

## **PRODUCTION AND COSTS**

Full year production was 8.64 million ounces of gold at total cash costs of \$282 per ounce and 367 million pounds of copper at total cash costs of \$0.79 per pound, meeting our original production and cash cost guidance for both gold and copper. This is the fourth straight year that Barrick has met its operating guidance, which demonstrates both the Company's ability to deliver on its targets and the success of its cost containment initiatives, despite escalating cost pressures.

In fourth quarter 2006, Barrick sold 2.28 million ounces of gold at total cash costs of \$287 per ounce, compared to 1.65 million ounces sold at total cash costs of \$221 per ounce for the prior-year quarter. The fourth quarter benefited from strong contributions from the North America and South America business units, particularly at Lagunas Norte, which produced 1.1 million ounces of gold at total cash costs of \$100 per ounce in its first full year of operations. The Australia Pacific business unit's operating performance in the fourth quarter was below expectations in part due to a lightning strike at the electrical facilities of the Porgera mine. Production levels have been curtailed by 50%, but are expected to return to full levels by the end of the first quarter 2007. Gold production from the Africa business unit included solid performances from the Tanzanian mines, and production and cash costs for South Deep through to its sale date of December 1.

Full year copper production exceeded the Company's original guidance, due to better than expected grades at Zaldívar.

## **RESERVES AND RESOURCES**

At year-end 2006, the Company had proven and probable gold reserves of 123 million ounces, based on a \$475-per-ounce gold price. The Company also reported gold mineral resources (measured and indicated) of 35 million ounces and inferred resources of 25 million ounces based on a \$525-per-ounce gold price.

Silver and copper contained in Barrick's gold reserves at year-end 2006 were 964 million ounces and 1.2 billion pounds, respectively. Silver is primarily derived from the Pascua-Lama deposit, one of the largest silver deposits in the world, which contains 689 million ounces of silver.

Barrick's copper reserves totaled 6.0 billion pounds, with an additional 6.6 billion pounds of measured and indicated resources<sup>3</sup>.

## **CORPORATE DEVELOPMENT**

The Company sold its 50% interest in the South Deep mine to Gold Fields Limited for total consideration of \$1.5 billion, including \$1.2 billion in cash and the balance in Gold Fields shares. This resulted in a gain on sale of \$288 million (\$0.34 per share). Barrick increased its equity interest in Highland Gold from 20% to 34% by contributing certain Russian assets, and recorded a gain on this transaction of \$51 million (\$0.06 per share). The Company concluded its offer for NovaGold, acquiring a 14.8% interest for cash of \$218 million.

## **HEDGE BOOK REDUCTION**

During fourth quarter 2006, Barrick reduced its fixed price corporate gold sales contract position by 1.0 million ounces, and incurred a pre-tax opportunity cost of \$327 million (\$0.37 per share) against its gold sales. For the full year, Barrick reduced its fixed price committed gold sales contracts by 9.4 million ounces, including the elimination of the legacy Placer Dome gold hedge

---

<sup>3</sup> Calculated in accordance with National Instrument 43-101 as required by Canadian securities regulatory authorities. For a breakdown of reserves and resources by category and additional information relating to reserves and resources, see pages 111-116 of Barrick's 2006 Year-End Report.

position. At February 21, 2007, the Company had completely eliminated its fixed price Corporate Gold Sales Contract position, more than two years ahead of its previously announced target date. Furthermore, the Company plans to eliminate the remaining floating spot price contracts by the end of the second quarter. As a result of these deliveries, the Company expects to incur an after-tax opportunity cost of \$564 million in Q1 2007 and \$65 million in Q2 2007.

“Barrick is very positive on the long-term outlook for gold,” said Greg Wilkins. “The elimination of all non-project related hedge contracts allows the Company to benefit fully from higher gold prices at its operating mines.”

## FINANCIAL POSITION

In October 2006, Barrick issued \$1.0 billion of Copper-Linked Notes that took advantage of high copper prices and are repayable in the dollar equivalent of 324 million pounds of copper. The issuance secured an average price of \$3.08 per pound on about 30% of expected copper production over the next three years, combined with ten and thirty year maturities. Barrick has the strongest credit rating in the gold industry; its cash balance stands at \$3.0 billion, and net debt totals \$1.1 billion.

Subsequent to year-end, the Company has entered into a transaction where it can further participate in higher copper prices up to \$3.50 per pound, while maintaining a floor price of \$3.00 per pound, on the remaining 274 million pounds of copper in the Copper-Linked Notes.

## INVESTOR DAY

Barrick is hosting an Investor Day in Toronto on February 22, starting at 9:00 am ET. The event can be viewed by webcast from this link: [www.barrick.com](http://www.barrick.com). The Company will be reviewing its 2007 business plans and providing an update on its project pipeline. A separate press release will be issued later today.

## 2007 OUTLOOK AND GUIDANCE

The Company expects 2007 gold production of 8.1 — 8.4 million ounces and copper production of approximately 400 million pounds. Total cash costs are expected to be in the range of \$335 — \$350 per ounce for gold and about \$0.90 per pound for copper. Gold production is expected to be slightly weighted to the second half of 2007.

Guidance for other significant items is as follows:

(\$ in millions, except for tax rate and amortization)

|                                 |                 |      |
|---------------------------------|-----------------|------|
| Corporation administration      | \$              | 140  |
| Exploration                     | \$              | 170  |
| Project development expense     | \$              | 190  |
| Other operating expense         | \$              | 115  |
| Interest income                 | \$              | 130  |
| Interest expense                | \$              | 95   |
| Capital expenditures*           | \$1,100-\$1,800 |      |
| Effective tax rate**            |                 | 30%  |
| Amortization per ounce — gold   | \$              | 95   |
| Amortization per pound — copper | \$              | 0.30 |

\* Range is subject to the timely receipt of permits and construction approvals.

\*\* Represents the underlying effective tax rate excluding the impact of deliveries into corporate gold sales contracts, as well as the impact of tax rate changes and changes in deferred tax valuation allowances. The effective tax rate for the full year is expected to be ~45% when the \$629 million opportunity cost of delivering into gold sales contracts in a low tax-rate jurisdiction is included. As a result of these deliveries, the tax expense in first and second quarters is expected to be based on the approximate 30% underlying effective tax rate on income excluding this opportunity cost.

\* \* \* \* \*

Barrick’s vision is to be the world’s best gold company by finding, acquiring, developing and producing quality reserves in a safe, profitable and socially responsible manner. Barrick’s shares are traded on the Toronto, New York, and London stock exchanges.

This MD&A is intended to help the reader understand Barrick Gold Corporation ("Barrick", "we", "our" or the "Company"), our operations, financial performance and present and future business environment. It includes the following sections:

- Our Business — a general description of our core business; our vision and strategy; our capability to execute our strategy; and key economic trends in our present business environment.
- Operations Review — an analysis of our consolidated results of operations for the last three years focusing on our material operating segments and the outlook for 2007.
- Liquidity, Capital Resources and Financial Position -an analysis of cash flows; sources and uses of cash; contractual obligations and commitments; our financial position; financial instruments; and off-balance sheet arrangements.
- Critical Accounting Policies and Estimates — a discussion of accounting policies that require critical judgments and estimates.

This MD&A, which has been prepared as of February 21, 2007, is intended to supplement and complement our audited consolidated financial statements and notes thereto for the year ended December 31, 2006 prepared in accordance with United States generally accepted accounting principles, or US GAAP (collectively, our "Financial Statements"). You are encouraged to review our Financial Statements in conjunction with your review of this MD&A. Additional information relating to our Company, including our most recent Annual Information Form, is available on SEDAR at [www.sedar.com](http://www.sedar.com) and on EDGAR at [www.sec.gov](http://www.sec.gov). For an explanation of terminology used in our MD&A that is unique to the mining industry, readers should refer to the glossary on page 57. All dollar amounts in our MD&A are in US dollars, unless otherwise specified.

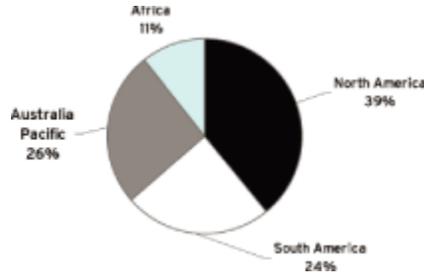

For the purposes of preparing our MD&A, we consider the materiality of information. Information is considered material if: (i) such information results in, or would reasonably be expected to result in, a significant change in the market price or value of our shares; or (ii) there is a substantial likelihood that a reasonable investor would consider it important in making an investment decision; or (iii) if it would significantly alter the total mix of information available to investors. We evaluate materiality with reference to all relevant circumstances, including potential market sensitivity.

## OUR BUSINESS

### Core Business

We are the world's preeminent gold mining company in terms of market capitalization, annual gold production and gold reserves. In early 2006, we completed the acquisition of Placer Dome Inc. ("Placer Dome"), which resulted in a significant increase in the scale of our mining operations. The acquisition of Placer Dome also added significant copper reserves at two mines, Zaldívar in Chile and Osborne in Australia. Further details of the Placer Dome acquisition can be found on page 19.

#### Gold Production by Region in 2006

We generate revenue and cash flow from the production and sale of gold and copper. We sell our production in the world market through three primary distribution channels: gold bullion is sold in the gold spot market; gold and copper concentrate is sold to independent smelting companies; and gold bullion and copper cathode is sold under gold and copper cathode sales contracts between ourselves and various third parties.

### Vision and Strategy

Our vision is to be the world's best gold mining company by finding, acquiring, developing and producing quality reserves in a safe, profitable and socially responsible manner.

Our goal is to create value for our shareholders. We reinvest cash flow from our mines in exploration, development projects and other investments to work towards the long-term sustainability of our business, to generate cash flow, and to provide leverage to gold prices through gold production and replacement of our reserve / resource base. It can take a number of years for a project to move from the exploration stage through to mine construction and production. Our business strategy reflects this long lead time by ensuring that we have a strong project pipeline, while effectively managing current operations.

In 2005, we set our 2006 strategy, which focused on growth in reserves and production, operational excellence, strengthening the organization and responsible mining. Our successes in each of these areas, including the successful integration of Placer Dome into Barrick, have laid the foundation for our 2007 key areas of focus: share price performance, responsible mining and building and maintaining a high performance organization.

## 2006 Strategic Objectives

Growth in reserves and production

- Growth at existing mine sites by finding new reserves and converting mineralized material to reserves
- Growth through successful exploration focusing principally in key exploration districts
- Growth through targeted acquisitions
- Advance the development of Cowal, Pascua-Lama, Ruby Hill and Buzwagi as well as newly acquired Placer Dome projects, including Pueblo Viejo, Cortez Hills, Donlin Creek and Sedibelo

Operational excellence

- Control costs
- Global supply chain management (such as extending tire life and evaluating alternatives for supply)
- Continuous improvement initiatives
- Currency, interest rate and commodity hedge programs
- Effective assessment and management of risk
- Effective capital allocation
- Secure efficient sources of funding for capital

Strengthen the organization

- Workforce — identify and develop talent
- Leadership development and succession planning
- Adopt best practices in corporate governance, including strengthening internal control over financial reporting

Responsible mining

- Reinforce health and safety culture
- Enhance environmental performance, including use of innovative technology to protect the

## 2006 Results

- Met market guidance for production
- Benefited from an excellent first full year of production at 3 new mines and brought the Cowal mine into production
- Advanced all of our major projects
- Achieved reserve growth through exploration discoveries
- Completed Placer Dome acquisition, sale of assets to Goldcorp Inc. (“Goldcorp”), South Deep sale, and Reko Diq acquisition
- Research and development successes that are expected to enhance project economics
- Realigned Russian business strategy
- Met market guidance for total cash costs
- Effective program of hedging and managing production cost risks, such as currency exchange rates, fuel and power
- Successfully reduced fixed-price Corporate Gold Sales Contracts and eliminated acquired Placer Dome hedge position
- Continuous improvement initiatives ongoing to mitigate cost pressures, increase throughput and quality improvements
- Launched capital allocation process improvements including new approvals process and tracking system
- Issued \$1 billion of copper-linked notes and increased credit facility from \$1.0 to \$1.5 billion
- Successful integration of Placer Dome across all regions and functions, including cultural integration
- Leadership development and succession plans completed for key leaders
- Achieved targets in developing compliance and governance capabilities
- Courageous Safety Leadership program rolled-out across Barrick
- Focus on contractor safety resulted in 40% reduction of incidents over

## 2007 Strategic Objectives

Share price performance

- Grow the business through a combination of opportunistic acquisitions, new deposit discoveries and replacement of reserves and resources
- Advance project pipeline through achievement of milestones, prioritization and effective sequencing
- Strong financial management, including hedge book management, balance sheet optimization and realizing additional Placer Dome acquisition synergies
- Operational excellence focused on meeting production and cost targets, realizing savings from ongoing continuous improvement initiatives, and increased focus on R&D
- Advance opportunities for vertical integration and effective consumables management

High performance organization

- Leadership development
- Optimization of business processes such as planning project management and risk management
- Technology improvements to increase automation and control costs
- Effective capital management through prioritization, capital allocation and value measurement
- Compliance with business code of conduct and applicable corporate governance legislation

Responsible mining

- Achieve safety and health performance targets
- Effective government relations and community engagement
- Environmental leadership through

environment

- Maintain positive community and government relations

2005

- Developed and adopted Corporate Social Responsibility (“CSR”) guidelines across Barrick
- Expanded Non-Governmental Organizations (“NGOs”) partnerships
- Improved ratings on Dow Jones Sustainability index
- Recipient of 2006 CME/CIDA Award for Excellence in CSR

energy and conservation strategy

### **Capability to Execute our Strategy**

Our capability to execute our strategy comes from the strength of our regional business unit structure, our experienced management team and a strong project pipeline that ensures long-term sustainability of the business.

#### *Regional Business Unit Structure*

We manage our business using a regional business unit (“RBU”) structure. We have four RBUs: North America, South America, Australia

Pacific, and Africa. Each region receives direction from the Corporate Office, but has responsibility for all aspects of its business such as strategy and sustainability of mining operations, including exploration, development, construction,

production and closure. Each team is led by its own Regional President, with oversight by the Corporate Office. Each region has two overriding responsibilities: to optimize current assets and to grow its business.

Each RBU essentially operates as a business unit and contains the following functional groups: Technical Services; Legal; Organizational Effectiveness, including Human Resources and Continuous Improvement; Finance; Operations Support; Communications; Exploration; Business Development; and Governmental Relations. Since their inception, the RBUs have added significant value to our business by realizing operational efficiencies in the region, allocating resources more effectively and understanding and better managing the local business environment, including labor, consumable costs and supply, and government and community relations. In a period of inflationary cost pressures experienced by the mining industry, we believe that our RBU structure has allowed us to better deal with the challenges and issues impacting our industry. Furthermore, this structure served us well for the integration of Placer Dome, which was successful and substantially complete by the end of second quarter 2006.

In fourth quarter 2006, on closing of a transaction to vend-in our Russian gold assets to Highland Gold Mining Plc ("Highland"), we concluded that we no longer had a Russia/Central Asia operating segment and our segment disclosure in our Financial Statements has been revised to exclude Russia/Central Asia.

#### *Experienced Management Team and Skilled Workforce*

We have an experienced management team with a proven track record in the mining industry. Strong leadership and governance are critical to the successful implementation of our core strategies. We continue to focus on leadership development for key members of our executive, senior mine management and frontline management. A skilled workforce has a significant impact on the efficiency and effectiveness of our operations. The remote nature of many of our mine sites, as well as strong competition for human resources, presents challenges in maintaining a well-trained and skilled workforce. We continue to focus our efforts on employee retention, recruiting skilled employees and positive labor relations, including training programs, leadership development and succession planning. In 2006, we completed the implementation of a Human Resource information system to help us effectively manage the impact our workforce has on our mining operations.

#### *Advanced Exploration and Project Pipeline*

Our pipeline of advanced exploration and development projects represents a critical component to our long-term strategy of growing the business. We and others in the mining industry face the challenges associated with finding, acquiring and developing projects. An economic discovery is no longer a guarantee of a new mine, as considerable opposition to new mining projects can develop from institutional NGOs or unstable political climates. The development of a new mine requires successful permitting and government relations, community dialogue and engagement, and significant financial and human capital. The size, breadth and scale of a company such as ours, coupled with our regional structure, enhances our prospects for success; however, the timeline for developing projects has increased significantly.

During 2004, we were focused on building our new mines and laying the groundwork for growth in our production. In 2005, we began to realize that growth, as our new mines, Tulawaka, Lagunas Norte and Veladero entered production. In 2006, our newest mine, Cowal, began production and our Pascua-Lama project received necessary environmental approvals in Chile and Argentina. We also completed a feasibility study for Buzwagi in Tanzania and are awaiting approval of the Environmental Impact Assessment ("EIA").

In 2006, we acquired Placer Dome, and with that acquisition, added four significant exploration and advanced stage projects to our project pipeline: Cortez Hills, Donlin Creek in North America; Pueblo Viejo in the Dominican Republic; and Sedibelo, a platinum deposit in South Africa. With this significant pipeline of projects, we are expanding our staff capacity. During the year, efforts were undertaken to quantify the expected requirements. Initiatives to meet these needs have now commenced through programs such as our Engineers-in-Training Program.

In addition to the focus on personnel, enhancements to systems and business processes are ongoing and will help to improve operating and cost visibility. We expect that these improvements will allow us to more easily identify value-creating opportunities in existing operating sites, development projects and related merger and acquisition activity. The improvements should allow better information sharing and the ability to benchmark operating activities so that best practices can be applied from our most efficient operations. For example, a detailed cost benchmarking exercise was completed for open pit mining in 2006 that led to the identification of improvement opportunities at a number of our mine sites.

Technical innovation is also being pursued, utilizing our in-house research and development (“R&D”) lab. Certain of our projects have realized benefits as a result of this R&D work, which has produced modified process flow designs that yield enhanced gold and metal by-product recoveries. An example of this is the change in metallurgical process design at Pueblo Viejo to improve recoveries of silver and zinc that we expect will have a positive impact on project economics. We increased our budget for R&D to \$20 million in 2007 from about \$8 million spent in 2006 to support the various ongoing initiatives.

#### *Cost Control and Supply Sourcing*

In 2006, our Supply Chain focus was on implementing long-term cost control and sourcing strategies for major consumables and supplies used in our mining activities through global commodity purchasing teams. We also focused on mitigating the impact that global shortages of commodities such as tires and cyanide have on our operations through implementation of long-term supply arrangements for these items. We have developed processes and systems to monitor usage and supply of tires at our mine sites that enable reallocation of tires between sites where necessary. In 2007, we plan to continue to implement cost control and sourcing strategies for consumables and supplies.

Energy costs, which include costs for electrical energy, diesel fuel, natural gas, propane, explosives and some energy costs embedded into maintenance and contractor services, account for approximately 30% of our total cash operating costs. In 2006, we launched a strategic effort to design and implement a company-wide, sustainable energy management program that will pursue demand management, operating efficiencies and investment in generating capability. In 2007, our goal is to manage our demand and seek to realize annual energy efficiency savings. We plan to review new technologies and analyze current practices to look for energy efficiency opportunities, as well as look to alternative, cleaner sources of energy, possibly including solar or geothermal energy. We also continue to review opportunities to increase our generating capability, including renewable energy projects such as the commissioning of our first 2 megawatt wind turbine at Veladero later in 2007.

Many of our development projects reside in areas where the energy infrastructure is either non-existent or severely stretched due to a lack of investment. The implementation of energy solutions to support our development activities is a significant opportunity for us to manage a large portion of future operating expenses and provide long lasting infrastructure for our mining activities. For example, in 2005, we built a gas-fired power plant in Nevada, which provides significant cost benefits to the Goldstrike property (see page 15 under Electricity).

#### *Maintenance Program*

Maintenance costs (including maintenance labor) represents about 30% of total cash operating costs at our mines. The cost of maintenance is not only a function of the price paid for parts and labor, but can also vary considerably depending on whether the maintenance is planned or unplanned, with unplanned maintenance being the more costly. We are designing a global maintenance program to support our operating mines and projects in the adoption of best practices to achieve optimal mine equipment performance and to enable cost-effective on site maintenance.

In 2006, our maintenance group supported various programs, including: maintenance trades training and certification (e.g. mechanics, welders) for our employees in Africa; implementation of a reporting system for key maintenance performance indicators for mines in Australia Pacific; establishment of a regionally-based reliability engineering team and test laboratory in North America to investigate the potential benefits of establishing regional-based laboratories and training facilities; and implementation of an upgraded electronic asset management system in South America.

In 2007, areas of focus for our maintenance group include standardized policies, procedures and processes for asset management; the introduction of new technology and programs to improve maintenance productivity; and setting standards for the implementation of a global enterprise asset management system.

#### *Continuous Improvement*

Our Continuous Improvement (“CI”) group’s vision is to achieve operational excellence and a company culture that engages every employee in improvement everyday. We have a global network of Barrick employees across all sites that focus on CI in all key aspects of our business. Structured problem solving and planning methodologies are used extensively to help identify and execute improvement initiatives while fostering Company wide learning through knowledge-sharing. Implementation of CI initiatives has led to significant value creation to Barrick in terms of cost mitigation, throughput increases and quality improvements.

#### *Environmental, Health and Safety*

Responsible mining is one of our key strategic objectives. As part of our commitment to responsible mining, we

focus on continuously improving health and safety programs, systems and resources to help control workplace hazards. Continuous monitoring and integration of health and safety into decision-making enables us to operate effectively, while also focusing on health and safety. In 2006, we completed a review of the Safety and Health System and Standards, with implementation commencing in 2007; we completed training of former Placer Dome supervisory and management level employees in our "Courageous Leadership for Safety and Health" program; we instituted Risk and Change Management processes including risk assessments; and we established contractor safety controls across all regions. Key areas of focus for 2007 will include: courageous safety leadership development for the remainder of the hourly personnel; implementation of the Gold Standards, which are security standards by which we handle and protect the gold from the point the gold is mined to the point when it is processed and shipped; identification of significant health issues; continued focus on risk and change management; and continuing communication of a safety culture as part of our core values.

We are subject to extensive laws and regulations governing the protection of the environment, use of water, endangered and protected species, waste disposal, mine closure and reclamation and worker health and safety. We seek to continuously implement operational improvements to enhance environmental performance. Our Environmental, Health, Safety and Sustainability Executive Committee is responsible for monitoring and reviewing environmental, safety and health policies and programs, assessing performance and monitoring current and future regulatory issues. We are a charter signatory to the International Cyanide Management Code. In March 2006, our Cowal mine became the first facility in the world to obtain the International Cyanide Institute Certification. We are a signatory to the UN Global Compact, which encourages businesses to support a precautionary approach to environmental challenges, undertake initiatives to promote greater environmental responsibility and encourage the development and diffusion of environmentally friendly technologies. Following the acquisition of Placer Dome, we began the implementation of our Environmental Management System ("EMS") Standard at all of the acquired operations. The EMS Standard contains 15 elements of good environmental management and is consistent with ISO 14001. Three of our mines: Lagunas Norte, Pierina and Zaldívar are ISO 14001 Certified and our goal is that others will receive certification in the future. Each year, we issue a Responsibility Report that outlines our environmental, health and safety and social responsibility performance for the year.

#### *Information Management and Technology*

Our Information Management and Technology ("IMT") group provides focused and responsive support to enable us to meet our current business objectives and long-term strategy elements. The IMT group also manages significant risks, such as information security; risks relating to the implementation of new applications; and the risk of failure of critical systems. We are implementing strategies to mitigate these risks, including monitoring operating procedures and the effectiveness of system controls to safeguard data, evaluating the effective use of technology and maintaining disaster recovery plans. Other areas of focus include working with other functional groups to reduce technology diversity and cost by standardizing system solutions, and ongoing analysis of business needs and the potential benefits that can be gained from system enhancements.

#### *Internal Control Over Financial Reporting*

Management is responsible for establishing and maintaining adequate internal control over financial reporting. Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with US GAAP.

The Company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the Company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with US GAAP, and that receipts and expenditures of the Company are being made only in accordance with authorizations of management and directors of the Company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Company's assets that could have a material effect on the Company's Financial Statements. Due to its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Barrick's annual management report on internal control over financial reporting for the year ended December 31,

2006 and the related attestation report of Barrick's auditors will be included in Barrick's 2006 Annual Report and its 2006 Form 40-F/Annual Information Form on file with the SEC and Canadian provincial securities regulatory authorities.

## Key Economic Trends

In 2006, higher gold, copper and silver prices continued. While benefiting gold and copper revenues and silver by product credits, this also led to higher royalty expenses. Although the trend of inflationary pressure on other commodities and consumables, such as oil and natural gas, eased late in 2006 and into 2007, prices for many other commodities and consumables, including electricity, tires and cyanide, remain at relatively high levels and continue to cause upward pressure on production costs. The gold mining industry has also been facing upward pressure on labor costs. We believe that other companies in the industry are experiencing similar trends for labor, commodities and consumables. Since the acquisition of Placer Dome, the increase in scale of our business means that these factors also impact the business on a larger scale.

### Gold, Copper and Silver Prices

Market gold and copper prices have a significant impact on our revenue. Silver prices impact total cash costs of gold as silver sales are recorded as a by-product credit. These prices are subject to volatile price movements over short periods of time, and are affected by numerous industry and macroeconomic factors that are beyond our control.

In 2006, gold prices ranged from \$516 to \$730, per ounce with an average market price of \$604 per ounce and closed the year at \$632 per ounce. The price of gold followed an upward trend in 2006, reaching a 25-year high of \$730 per ounce in May, primarily due to strong physical and investment demand. Since May, market gold prices retreated to trade generally in the \$600 to \$650 per ounce range. Other economic influences such as supply and demand, oil prices, trade deficits, the US dollar and US interest rates are factors in explaining gold price movements, as well as Central Bank activity. Demand for gold remains strong, both for jewelry and as an investment in response to global economic and political uncertainty. In the past few years there has been a resurgence in gold as an investment vehicle, with more readily accessible gold investment opportunities (such as gold exchange traded funds — "ETFs"). There has been speculation that central banks in Asia and Russia have considered diversifying their reserves away from the US dollar and into other currencies and gold, which would provide further fundamental strength to gold prices. We believe that economic conditions for a higher gold price remain favorable and we expect that gold mine supply will continue to fall short of jewelry and investment demand.

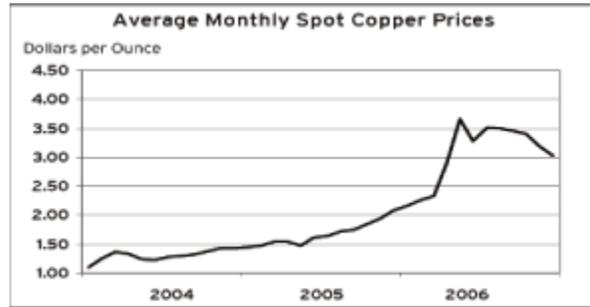

Over the last three years, our realized gold sales prices have generally tracked the rising market gold price. In certain periods our average realized price was below market prices as we voluntarily chose to deliver some of our production into gold sales contracts at prices lower than prevailing market prices, consistent with our goal to eliminate our fixed-price Corporate Gold Sales Contracts position (see page 47 for more details). In 2006, our realized gold price was reduced during the year by the opportunity cost of deliveries into fixed-price Corporate Gold Sales Contracts of \$367 million (\$327 million in fourth quarter 2006) combined with Placer Dome gold hedge accounting adjustments of \$165 million as we completely eliminated the position in 2006. Had it not been for these items, our realized price would have been approximately \$63 per ounce higher in 2006 (and would have largely tracked the spot gold price). In 2006, we reduced our fixed-price Corporate Gold Sales Contracts through the delivery of 1.2 million ounces of production into contracts and converting the pricing of 0.5 million ounces into future spot pricing. We also reallocated 3.0 million ounces of hedges to the Project Gold Sales Contracts (see pages 45 to 48 for a description of our Gold Sales Contracts).

As of February 21, 2007, we fully eliminated the remaining fixed-price Corporate Gold Sales Contracts. We expect to eliminate the entire Floating Spot-Price Gold Sales Contracts position through deliveries of gold production before the end of the second quarter of 2007. This is expected to result in a pre-tax reduction to our net income and cash flow of \$572 million (\$564 million post-tax) in first quarter 2007, and \$76 million (\$65 million post-tax) in second quarter 2007.

The acquisition of Placer Dome has led to copper prices having a significant effect on our results due to copper production from the Zaldívar copper mine and the Osborne gold and copper mine. In 2006, these mines produced 367 million pounds of copper in the aggregate.

Copper prices rose significantly in the first half of 2006, reaching a high of \$3.99 per pound in May. Realized copper prices tracked the rising spot market prices. This rally was mainly due to strong physical and investment demand, as well as relatively low global copper inventory levels, exacerbated by labor strikes at some of Chile's large copper mines. We took advantage of these high copper prices to issue \$1 billion of copper-linked notes that are repayable in the dollar equivalent of 324 million pounds of copper (starting in October 2006) over the following three years at \$3.08 per pound (see page 41 for more details). In the latter part of the year, copper prices trended lower from the high in May 2006, closing at \$2.85 per pound on December 31, 2006. Copper prices have declined further since December 31, 2006 on concerns of a slowdown in global economic activity. In February 2007, we entered into a transaction where we can participate in stronger copper prices up to \$3.50 per pound, while maintaining a floor price of \$3.00 per pound, on the remaining 274 million pounds of copper in copper-linked notes.

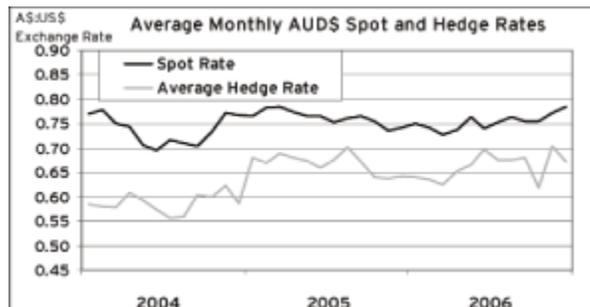

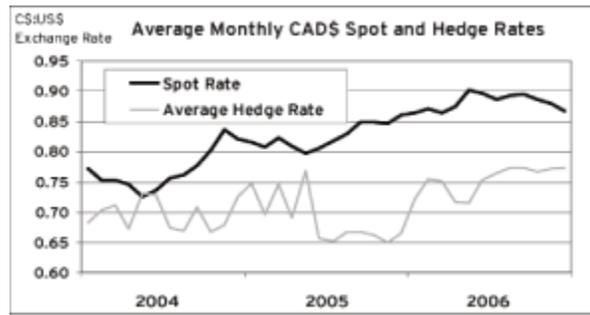

Silver prices have risen more than 40% since the beginning of the year, and reached a high of \$15.17 per ounce in May 2006, largely due to investment demand led by the silver exchange-traded fund launched in second quarter 2006. Silver rallied in the first few months of 2006 along with gold, despite continued news that attrition in the US photographic market would depress demand. Silver prices have had support from industrial consumers as technological advances continue to create new uses for silver. Industrial demand now accounts for approximately half of total demand. Over the last three years we have produced between 10 to 18 million ounces of silver by-products annually, mainly at our Eskay Creek mine. For 2007, we expect to produce about 7 million ounces of silver, as Eskay Creek approaches the end of its reserve life in early 2008. After Pascua-Lama begins production, we expect that the quantities of silver we produce annually will increase significantly due to the substantial amount of silver that is contained in the gold mineral reserves.

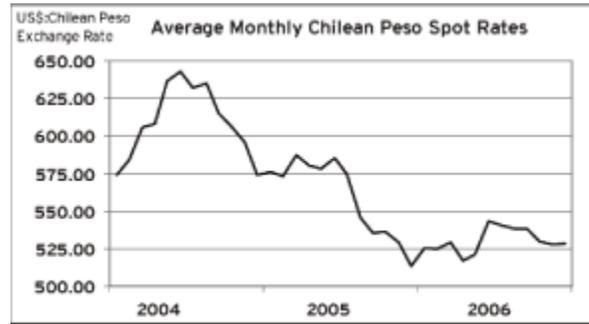

Based on estimates of 2007 production and sales, the approximate sensitivities of our income from continuing operations before income taxes and other items to a 10% change in metal prices from 2006 average spot rates are as follows: gold — \$340 million; copper — \$75 million; and silver- \$10 million.

#### Currency Exchange Rates

Results of our mining operations in Australia, Canada and Chile, reported in US dollars, are affected by exchange rates between the Australian, Canadian and Chilean currencies and the US dollar because a portion of our annual expenditures are based in local currencies. Following the Placer Dome acquisition, our exposure to the Australian dollar and the Chilean Peso increased.

A weaker US dollar would cause our costs reported in US dollars to increase. In 2006, the Canadian dollar stabilized at the higher levels reached in 2005, mainly due to sustained higher energy prices and global investor interest in resource assets. The Australian dollar has appreciated, mainly due to higher commodity prices and a strong economic performance in Australia resulting in an interest rate environment that is attractive to investors. The Chilean Peso strengthened in tandem with copper prices in 2006. It has since weakened following copper.

We have a currency hedge position as part of our strategy to control costs by mitigating the impact of volatility in the US dollar on Canadian and Australian dollar-based costs. About 70% of our consolidated production costs are denominated in US dollars and are not exposed to fluctuations in US dollar exchange rates. For the remaining portion, our currency hedge position has mitigated to a significant extent the effect of the weakening of the US dollar over the last few years on operating costs at our Australian and Canadian mines. Over the last three years, our currency hedge position has provided benefits to us in the form of hedge gains when contract exchange rates are compared to prevailing market exchange rates as follows: 2006 — \$84 million; 2005 — \$100 million; and 2004 — \$96 million. These gains are reflected as an offset to our operating costs. We have also recorded hedge gains which offset administration expenses as follows: 2006 — \$14 million; 2005 - \$16 million; 2004 — \$11 million.

Our currency hedge position at the end of 2006 provides protection for a significant portion of our Canadian and Australian dollar-based costs for the next three years. The average hedge rates vary depending on when the contracts were put in place. For hedges in place for future years, average hedge rates are higher than 2006 because some of the contracts were added over time as the US dollar weakened. The average rates of currency contracts over the next three years are approximately \$0.72 for Australian dollar contracts and approximately \$0.81 for Canadian dollar contracts. Beyond the next three years, our Canadian dollar-based costs principally represent corporate administration costs at our head office. The portion of the Australian dollar-based costs, that remain unhedged, are subject to market currency exchange rates, and consequently costs reported in US dollars for our Australian mining operations could increase if currency exchange rates against the US dollar remain at present levels.

As of December 31, 2006, we had not hedged any of the Chilean Peso exposure at Zaldivar or the Pascua-Lama project. In early 2007, we opportunistically added 6.5 billion of Chilean peso hedges for exposures in 2007.

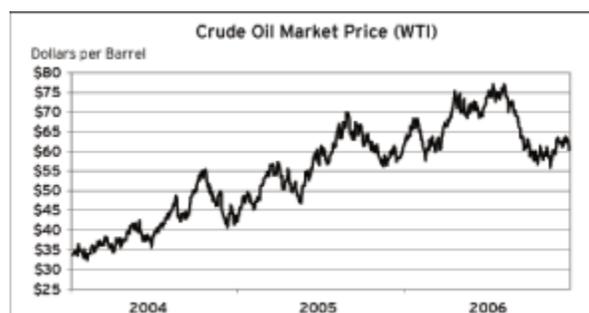

For the unhedged portion of estimates of our Australian, Canadian and Chilean currency-based costs for 2007, a 10% change in market exchange rates for these currencies would result in a change in costs reported in US dollars for these currencies of about \$32 million. Further information on our currency hedge position is included in note 19 to the Financial Statements.

### *Inflationary Cost Pressures*

The mining industry continues to experience price inflation for many commodities and consumables used in the production of gold and copper, as well as, in some cases, constraints on supply. These pressures have led to a trend of higher production costs reported by many gold producers, and we have been actively seeking ways to mitigate these cost pressures. In the case of diesel fuel, we put in place hedge positions that have been successful in mitigating the impact of recent price increases to a significant extent. For other cost pressures, we have been focusing on supply chain management and continuous improvement initiatives to mitigate the impact on our business.

### **Fuel**

We consume on average about 3.5 million barrels of diesel fuel annually across all our mines.

Diesel fuel is refined from crude oil and is therefore subject to the same price volatility affecting crude oil prices. With global demand remaining high in 2006, oil

prices rose from \$63 per barrel at the start of the year to a record high \$78 per barrel in July 2006, and closed at \$61 per barrel at the end of the year. Since the end of 2006, the price of crude oil has continued to decline due to warmer weather in the US northeast, producer hedging and technical trading based on these lower levels. To help mitigate rising oil prices and control the cost of fuel consumption, at year end we had a fuel hedge position totaling 4.2 million barrels, which represents about 30% of our total estimated consumption in 2007 and 15-20% of our total estimated consumption in each of the following six years. The fuel hedge contracts are primarily designated for our Nevada based mines and have an average price of \$59 per barrel. In 2006, we realized benefits in the form of fuel hedge gains totaling \$16 million (2005: \$10 million; 2004: \$4 million), when fuel hedge prices were compared to market prices. These gains are reflected in our operating costs. Based on estimates of our 2007 diesel fuel consumption, a \$5 per barrel increase in the price of oil would result in an increase in our annual cost of fuel consumed of about \$16 million for the unhedged portion of our fuel consumption.

### **Electricity**

We purchase about 3 billion kilowatt hours (“kwh”) of electricity annually across all our mines. Electricity costs represent approximately 12% of our operating costs to produce gold and copper. We typically buy electricity from regional power utilities, but at some mines, we generate our own power. Fluctuations in electricity prices are generally caused by local economic factors. Electricity prices have generally been rising in recent years due to increases in the price of diesel fuel, coal and natural gas, which are used by many power generators, as well as excess demand for electricity. Natural gas prices declined in North America in 2006, mainly due to mild winter weather, a relatively calm hurricane season, and high natural gas inventory levels.

In 2005, we completed construction of our Western 102 power plant in Nevada for our Goldstrike mine, designed to enable us to lower the cost of power consumed at the mine. The plant has enabled us to lower the cost per kwh from approximately 10 cents to approximately 8 cents in 2006, with a corresponding decrease of approximately \$17 million in the total cash costs of gold produced at Goldstrike or about \$9 per ounce in 2006.

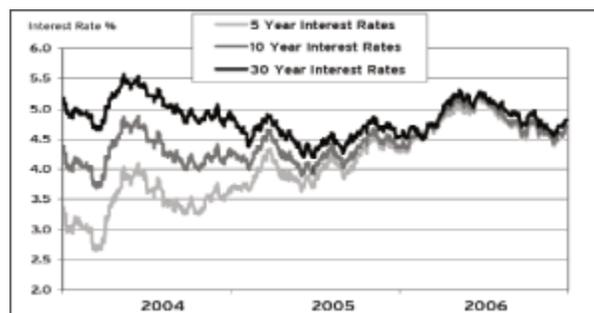

### **Consumables**

With increasing demand for tires and limitations in supply from tire manufacturers, costs have been rising and some companies have experienced difficulty securing tires. We have been successful in mitigating this cost pressure by finding ways to extend tire life and looking at various alternatives for supply. In 2006, we completed a tire tender process and concluded long-term sourcing arrangements with preferred tire suppliers to ensure that we continue to receive an adequate supply of tires for our mines and development projects. The limited availability of tires did not have a significant impact on productivity at our mines in 2006. In 2007, we will continue to monitor tire usage and implement improved tire management processes to further extend tire life.

Generally, prices for certain other consumables, such as explosives, grinding media and cyanide, have also been increasing. We experienced price increases for explosives in 2006, by 25% in some cases, due to increases in raw materials prices (natural gas and ammonia), but we were able to work with our suppliers to mitigate the impact of price increases on these raw materials and explosives costs. Prices for grinding media have also increased, by 15% in some cases.

### **Labor Costs**

Labor costs represent approximately 30% of our total cash operating costs. With high demand for experienced miners and relatively inflexible supply, the industry has been facing upward pressure on labor costs, as well as higher turnover rates in some cases. In North America, the combination of a strong market combined with low unemployment in certain areas in which we operate, has increased the recruiting cycle times for experienced miners and operators and for technical occupations. In South America, the region is experiencing pressure from organized labor groups to increase wages due to the recent high metal prices. In our Africa region, there is a shortage of qualified and experienced Tanzanians for senior and technical roles. This shortage has been addressed by contracting expatriates primarily from South Africa and Australia, but at significantly higher costs. In our Australia Pacific region, despite a trend of an increasingly mobile workforce between Australia and Papua New Guinea, there remain skill shortages in both countries, due in part to increased competition for high caliber graduates entering the mining sector and high demand for and shortage of skilled trades (e.g. electrical and mechanical). Labor cost pressures have been most significant in our Australia Pacific region.

Short-term US dollar interest rates rose in the beginning of 2006 as the US Federal Reserve continued its tightening cycle. By mid-2006 the US Federal Reserve put this tightening cycle on hold, and we expect the yield curve to remain relatively flat as the US Federal Reserve sees inflation pressures moderating over time. Volatility in interest rates mainly affects interest receipts on our cash balances (\$3.0 billion at the end of 2006), and interest payments on variable-rate debt (approximately \$163 million at the end of 2006). The relative amounts of variable-rate financial assets and liabilities may change in the future, depending upon the amount of operating cash flow we generate, as well as amounts invested in capital expenditures.

## OPERATIONS REVIEW

### Selected Annual Information

For the years ended December 31  
(\$ millions, except per share, per ounce/pound data in dollars)

|   | Gold               | Copper <sup>1</sup> |
|---|--------------------|---------------------|
|   | 2006               | 2006                |
| Production<br>(‘OOOs oz/millions lbs) <sup>2</sup>    | 8,643              | 367                 |
| Sales <sup>1</sup>                                    |                    |                     |
| OOOs oz/millions lbs <sup>3</sup>                     | 8,390              | 376                 |
| \$ millions <sup>3</sup>                              | \$ 4,485           | \$ 1,151            |
| Market price <sup>4</sup>                             | 604                | 3.05                |
| Realized price <sup>4,5</sup>                         | 541                | 3.06                |
| Total cash costs <sup>2,4,6</sup>                     | 282                | 0.79                |
| Amortization <sup>2,4,7</sup>                         | 77                 | 0.43                |
| Total production costs <sup>2,4</sup>                 | \$ 359             | \$ 1.22             |
|   | 2006               | 2005                |
| Net income from continuing operations                 | \$ 1,209           | \$ 395              |
| Net income from continuing operations — per share     |                    |                     |
| Basic   | 1.44               | 0.74                |
| Diluted   | 1.42               | 0.73                |
| Net income  | 1,506              | 401                 |
| Net income per share                                  |                    |                     |
| Basic   | 1.79               | 0.75                |
| Diluted   | 1.77               | 0.75                |
| Cash inflow (outflow) from continuing operations      |                    |                     |
| Operating activities                                  | 2,122              | 726                 |
| Investing activities                                  | (1,593)            | (1,180)             |
| Financing activities                                  | (1,347)            | 93                  |
| Cash inflow from discontinued operations <sup>8</sup> | 2,828              | —                   |
| Cash position — end of year                           | 3,043              | 1,037               |
| Total assets <sup>9</sup>                             | 21,373             | 6,862               |
| Total long-term financial liabilities <sup>10</sup>   | \$ 3,394           | \$ 1,780            |
| Gold reserves (millions of contained ounces)          | 123.1 <sup>A</sup> | 88.6                |
| Copper reserves (billions of contained pounds)        | 6.0 <sup>A</sup>   | —                   |

<sup>1</sup> The 2005 and 2004 comparative periods for copper have been omitted as we did not produce any significant amounts of copper prior to the production from the copper mines acquired with Placer Dome.

<sup>2</sup> Gold production and total cash cost per ounce/pound/ton statistics reflect our equity share of production, including our equity share of production from the South Deep mine through November 30, 2006.

<sup>3</sup> Gold sales (\$ millions) exclude the results of discontinued operations. Gold sales (‘OOOs oz/millions lbs) exclude the results of discontinued operations and reflect our equity share of sales.

<sup>4</sup> Per ounce/pound weighted average.

- 5 The realized gold price in 2006 is inclusive of the opportunity cost of deliveries into gold sales contracts of \$367 million, combined with Placer Dome gold hedge accounting adjustments of \$165 million.
- 6 Total cash costs per ounce/pound/ton statistics exclude amortization and inventory purchase accounting adjustments. Total cash costs per ounce/pound/ton is a performance measure that is used throughout this MD&A. For more information see pages 31 to 32.
- 7 Amortization includes inventory purchase accounting adjustments.
- 8 In 2006, we received cash of approximately \$1.6 billion from the sale of operations to Goldcorp and approximately \$1.2 billion from the sale of the South Deep mine to Gold Fields.
- 9 Total assets increased in 2006 largely due to the acquisition of Placer Dome that resulted in the recognition of assets totaling \$15.3 billion.
- 10 Total long-term financial liabilities increased in 2006 largely due to liabilities totaling \$3.0 billion that were assumed in the acquisition of Placer Dome.
- A Calculated in accordance with National Instrument 43-101 as required by Canadian securities regulatory authorities. For United States reporting purposes, Industry Guide 7, (under the Securities and Exchange Act of 1934), as interpreted by Staff of the SEC, applies different standards in order to classify mineralization as a reserve. Accordingly, for U.S. reporting purposes, 1.88 million ounces of the Cortez reserve and Pueblo Viejo are classified as mineralized material. For a breakdown of reserves and resources by category and additional information relating to reserves and resources, see pages 111-116 of the Year End Report 2006.

At the end of 2006, we had proven and probable gold reserves of 123.1 million ounces.<sup>1</sup> We also reported gold mineral resources (measured and indicated) of 35.0 million ounces and inferred resources of 24.9 million ounces.<sup>2</sup> We have proven and probable copper reserves of 6 billion pounds,<sup>2</sup> with an additional 6.6 billion pounds of measured and indicated resources.<sup>2</sup> Copper contained in Barrick's gold reserves at year end 2006 was 1.2 billion pounds.<sup>2</sup> Silver contained in our gold reserves at year end is 963.9 million ounces and is primarily derived from the Pascua-Lama deposit, one of the largest silver deposits in the world, which contains 689.3 million ounces of silver.<sup>2</sup> By replacing gold and copper reserves depleted by production year over year, we can maintain production levels over the long term. If depletion of reserves exceeds discoveries over the long term, then we may not be able to sustain gold and copper production levels. Reserves can be replaced by expanding known ore bodies, acquiring mines or properties or discovering new deposits. Once a site with gold or copper mineralization is discovered, it may take several years from the initial phases of drilling until production is possible, during which time the economic feasibility of production may change. Substantial expenditures are required to establish proven and probable reserves and to construct mining and processing facilities. Given that exploration is speculative in nature, exploration projects may prove unsuccessful.

## Executive Overview and 2007 Outlook

Gold production in 2006 has increased substantially over the prior year due to contributions from our new mines: Tulawaka, Lagunas Norte, Veladero and Cowal; as well as production from the Placer Dome mines acquired in January 2006. Gold production in 2006 includes 2.56 million ounces from the acquired Placer Dome mines. In 2006, we also produced 367 million pounds of copper from two copper mines acquired with Placer Dome. Earnings and operating cash flow have increased substantially due to the higher gold production levels and higher realized gold prices, as well as the contribution from copper production at recent high copper prices. Earnings in 2006 also reflect a pre-tax

<sup>1</sup> Calculated in accordance with National Instrument 43-101 as required by Canadian securities regulatory authorities. For United States reporting purposes, Industry Guide 7, (under the Securities and Exchange Act of 1934), as interpreted by Staff of the SEC, applies different standards in order to classify mineralization as a reserve. Accordingly, for U.S. reporting purposes, 1.88 million ounces of the Cortez reserve, Buzwagi and Pueblo Viejo are classified as mineralized material. For a breakdown of reserves and resources by category and additional information relating to reserves and resources, see pages 111-116 of the Year End Report 2006.

<sup>2</sup> For a breakdown of reserves and resources by category and additional information relating to reserves and resources, see pages 111-116 of the Year End Report 2006.

\$367 million opportunity cost relating to the voluntary delivery of 1.2 million ounces of gold production into fixed-price Corporate Gold Sales Contracts, and a pre-tax gain of \$288 million on the sale of South Deep. Earnings on a per share basis reflect 322.8 million common shares issued in first quarter 2006 to acquire Placer Dome. In 2006, we completed the sale of certain Placer Dome operations to Goldcorp, and the sale of South Deep to Gold Fields. We also completed the acquisition of a 37.5% indirect interest in the Reko Diq copper project in Pakistan and acquired a 15% interest in NovaGold Resources Inc. ("NovaGold"). For more details please see pages 19 to 20.

## Key Factors Affecting Earnings

For the years ended December 31  
(\$ millions)

|  | Refer<br>to page |                 |
|--|------------------|-----------------|
| <b>Net income — 2005</b>                           |                  | <b>\$ 401</b>   |
| Increase (decrease)                                |                  |                 |
| Higher market gold prices <sup>1</sup>             | 12               | <b>\$ 1,342</b> |
| Less: impact of gold sales contracts <sup>1</sup>  | 12               | <b>(476)</b>    |
| Higher sales volumes gold <sup>2</sup>             | 20               | <b>429</b>      |
| Higher earnings from copper sales                  | 20               | <b>767</b>      |
| Higher total cash costs                            | 21               | <b>(461)</b>    |

| Higher exploration and project development expense | 33               | <b>(149)</b>    |
| Higher income tax expense <sup>3</sup>             | 37               | <b>(387)</b>    |
| Special items <sup>1,4</sup>                       | 18               | <b>265</b>      |
| Other  |                  | <b>(106)</b>    |
| <b>Total increase</b>                              |                  | <b>\$ 1,105</b> |
| <b>Net income — 2006</b>                           |                  | <b>\$ 1,506</b> |

<sup>1</sup> Our realized gold price was reduced during the year for the opportunity cost of deliveries into fixed-price Corporate Gold Sales Contracts of \$367 million, combined with Placer Dome gold hedge accounting adjustments of \$165 million. Had it not been for these items, our realized price would have been approximately \$63 per ounce higher in 2006. The opportunity cost of deliveries into fixed-price Corporate Gold Sales Contracts and the Placer Dome gold hedge accounting adjustments have been excluded from the special items line on this table.

<sup>2</sup> Impact of changing sales volumes on margin between selling prices, total cash costs and amortization, but excluding inventory purchase accounting adjustments.

<sup>3</sup> Excluding the impact of the tax effects of special items.

<sup>4</sup> Special items are presented on a post-tax basis. See page 18 for a description of the special items.

In 2006, we continued work on advancing our project pipeline, including our new Ruby Hill mine in Nevada, that began production in February 2007; Cortez Hills and Donlin Creek in North America; Pueblo Viejo in the Dominican Republic; Pascua-Lama in Chile/Argentina; Sedibelo in South Africa; Buzwagi and Kabanga in Tanzania; Fedorova in Russia; and Reko Diq in Pakistan. We generated substantial amounts of operating cash flow, over \$2.1 billion. We generated \$1.6 billion from the sale of operations to Goldcorp; \$1.2 billion from the sale of South Deep; and \$1 billion on issuance of copper-linked notes. We used \$1.1 billion to fund 2006 capital expenditures and \$1.8 billion to settle the acquired Placer Dome hedge position. Our closing cash position at the

end of 2006 was \$3.0 billion, which, when combined with future operating cash flow and other sources of liquidity, is expected to provide the funding for capital requirements associated with our project pipeline in the short-term. We continue to have the gold mining

industry's only A credit rating (A-), as rated by Standard & Poor's.

### Special Items — Effect on Earnings Increase (Decrease) (\$ millions)

| For the years ended December 31  | Refer to page | 2006            |                 | 2005           |                | 2004            |              |

### 2007 Outlook

For the year ended December 31  
(\$ millions, except as otherwise indicated)

|  | 2007E           |
|--|-----------------|
| <b>Gold</b>                                  |                 |
| Production (millions of ounces)              | 8.1-8.4         |
| Total cash costs <sup>1</sup> (\$ per ounce) | \$335-\$350     |
| Amortization <sup>2</sup> (\$ per ounce)     | \$ 95           |
| <b>Copper</b>                                |                 |
| Production (millions of pounds)              | 400             |
| Total cash costs <sup>1</sup> (\$ per pound) | \$ 0.90         |
| Amortization <sup>2</sup> (\$ per pound)     | \$ 0.30         |
| Corporate administration expense             | \$ 140          |
| Exploration expense                          | \$ 170          |
| Project development expense <sup>3</sup>     | \$ 190          |
| Other operating expenses                     | \$ 115          |
| Interest income <sup>4</sup>                 | \$ 130          |
| Interest expense <sup>5</sup>                | \$ 95           |
| Capital expenditures <sup>6</sup>            | \$1,100-\$1,800 |
| Tax rate <sup>7</sup>                        | 30%             |

<sup>1</sup> Guidance reflects our equity share of production. Gold production is expected to be slightly lower in the first half of 2007 than in the second half of 2007. Total cash costs per ounce/pound/ton exclude amortization expense and inventory purchase accounting adjustments charged to cost of sales. Total cash costs per ounce/pound/ton is a performance measure that is used throughout this MD&A. For more information see pages 31 to 32.

- 2 Increase in rates per ounce in 2007 principally reflects the final purchase price allocation for Placer Dome mines.
- 3 Increase in 2007 mainly reflects higher development activity levels at projects.
- 4 Higher interest income in 2007 mainly reflects expected higher average cash balances.
- 5 Net of amounts capitalized of \$140 million. Interest costs incurred are expected to increase in 2007 due to higher levels of debt outstanding after debt issuances in 2006. Interest expense is expected to decrease in 2007 as more interest is capitalized at acquired late stage exploration and other projects including Cortez Hills, Donlin Creek, Pueblo Viejo, Buzwagi, Sedibelo, and Reko Diq.
- 6 Higher capital expenditures in 2007 include construction costs expected at Buzwagi, Pascua-Lama and Pueblo Viejo totaling \$900 million. Range is subject to the Company receiving the timely receipt of permits and construction approvals.
- 7 Represents the underlying effective tax rate excluding the impact of deliveries into corporate gold sales contracts, as well as the impact of tax rate changes and changes in deferred tax valuation allowances. The effective tax rate for the full year is expected to be approximately 45% when the \$629 million opportunity cost of delivering into gold sales contracts in a low tax-rate jurisdiction is included. As a result of these deliveries the tax expense in first and second quarters is expected to be based on the 30% underlying effective tax rate on income excluding this opportunity cost.

Our financial performance is affected by our ability to achieve targets for production volumes and total cash costs. We prepare estimates of future production and total cash costs of production for our operations. These estimates are based on mine plans that reflect the expected method by which we will mine reserves at each mine, and the expected costs associated with the plans. Actual gold and copper production and total cash costs may vary from these estimates for a number of reasons, including if the volume of ore mined and ore grade differs from estimates, which could occur because of changing mining rates; ore dilution; varying metallurgical and other ore characteristics; and short-term mining conditions that require different sequential development of ore bodies or mining in different areas of the mine. Mining rates are impacted by various risks and hazards

inherent at each operation, including natural phenomena, such as inclement weather conditions, floods, and earthquakes, and unexpected labor shortages or strikes. Total cash costs per ounce/pound/ton are also affected by ore metallurgy that impacts gold and copper recovery rates, labor costs, the cost of mining supplies and services, foreign currency exchange rates and stripping costs incurred during the production phase of the mine. In the normal course of our operations, we attempt to manage each of these risks to mitigate, where possible, the effect they have on our operating results.

## **Acquisitions and Divestitures**

Barrick has grown historically through a combination of organic growth through new mineral reserve discoveries and acquisitions. Most recently, the acquisition of Placer Dome has led Barrick to becoming the world's preeminent gold mining company.

### *Acquisition of Placer Dome*

In first quarter 2006, we acquired all the outstanding common shares of Placer Dome at a total cost of approximately \$10.0 billion, including \$1.3 billion in cash and 322.8 million Barrick common shares. We consolidated Placer Dome's results of operations from January 20, 2006 onwards.

Placer Dome was one of the world's largest gold mining companies. It had 12 producing mines based in North America, South America, Africa and Australia/Papua New Guinea, and four significant projects that are in various stages of exploration/development. Placer Dome's most significant mines were Cortez in the United States, Zaldívar in Chile, Porgera in Papua New Guinea, North Mara in Tanzania and South Deep in South Africa. The most significant projects were Cortez Hills and Donlin Creek in the United States, Pueblo Viejo in the Dominican Republic, and Sedibelo in South Africa. The acquisition of Placer Dome was attractive principally due to proximity of both companies' mining operations and the attractive pipeline of projects held by the combined company.

We believe that the business combination between Barrick and Placer Dome was an opportunity to create a Canadian-based leader in the global gold mining industry. This business combination further strengthened our position in the industry, with respect to our reserves, development pipeline, production profile, and balance sheet. In the second quarter 2006, we completed the majority of integration activities for the Placer Dome mines and offices. The integration plan, which we began immediately following the acquisition of Placer Dome in first quarter 2006, focused on integrating people and mining operations of Placer Dome, consolidation of certain business functions and exploration offices, and elimination of redundancies between the two organizations. We have identified over \$200 million in annual synergies from the combined companies and we expect to reach the \$200 million annual synergies by the end of 2007. The synergies identified are in the following areas:

- Administration and offices globally — We expect this area to contribute about 25% of the total synergies. In 2006, we closed redundant offices around the world, including Placer Dome's Brisbane office in Australia; Santiago office in Chile; and Reno and Denver offices in the US. Most head office functions have been transferred from Vancouver to Toronto. We have also begun to realize synergies from other consolidating activities around IT services, consolidated annual reporting, and establishment of regional shared service centers.
- Exploration — This area contributes about 25% of the total synergies. In 2006, synergies were realized mainly from a reduced total exploration expenditure on "new mine exploration" due to overlapping budgets and reduced exploration on existing Barrick and Placer projects as a result of more rigorous approval criteria for the combined company.
- Operations and technical services — This area comprises about 20% of the total synergies. Value is being driven from sharing of operational and maintenance best practices; project optimization; continuous improvement; strategic sourcing and supply chain management.
- Finance and tax — We captured significant value by capitalizing on opportunities for debt consolidation, reduced fees and costs, tax related savings and insurance savings, which comprise about 30% of the total synergies.

We accounted for the acquisition of Placer Dome as a purchase business combination with Barrick as the acquirer. The cost of acquisition has been allocated to the assets and liabilities acquired. The excess of the purchase cost over the net assets acquired represents goodwill arising upon the acquisition. Goodwill principally represents the advantage of sustaining and growing a portfolio of mining operations and will be enhanced in the combined business through finding new mineral reserves and synergies that are realizable from combining the operations of both companies.

We believe that goodwill arises due to the benefits that can be realized from managing a portfolio of mines and mineral properties, rather than from individual mines. In managing a group of mines, we have the flexibility, through our regional business units, to allocate scarce resources such as capital and manpower to the best

opportunities. We seek to sustain and grow the portfolio of mines in each region through locating new investment opportunities over time, thereby sustaining the region as a going concern and, as a consequence, goodwill value. The realization of synergies is managed at a regional level. Each region has identified potential synergies and is focused on the realization of those synergies. We believe that, based on the way we organize and manage our business, that goodwill is most naturally associated with our regional business units. Notwithstanding this belief, the allocation of goodwill to reporting units is determined by specific accounting rules that may preclude defining reporting units to represent aggregations of mines. We are presently completing a process to determine the appropriate definition of reporting units for the allocation of goodwill, which could range from either individual mines up to aggregation of all mines in each regional business unit. On conclusion of this process the final allocation of goodwill to reporting units will be completed. For further information on goodwill allocation and goodwill impairment testing see page 53.

#### *Sale of Certain Placer Dome Operations to Goldcorp*

In second quarter 2006, we completed the sale of shares of Placer Dome (CLA) Limited to Goldcorp Inc. under a sale agreement that was entered into with Goldcorp at the time of our original offer to acquire Placer Dome. On completion of the transaction, Goldcorp assumed interests and liabilities in all of Placer Dome's Canadian operations (other than its office in Vancouver), including all mining, reclamation and exploration properties, Placer Dome's interest in the La Coipa mine in Chile, and a 40% interest in the Pueblo Viejo project in the Dominican Republic, for cash consideration of \$1.6 billion. We recognized that we would be able to create more value with the remaining Placer Dome assets, after selling Placer Dome's Canadian operations to Goldcorp. The results of these operations were consolidated until closing of the sale (May 12, 2006), and are presented under discontinued operations in the Financial Statements. No gain or loss arose on closing of the transaction.

#### *Acquisition of Interest in Reko Diq*

In third quarter 2006, we completed the acquisition of a 50% interest in Atacama Copper Pty Ltd. ("Atacama"), which has a 75% interest in the Reko Diq project in Pakistan and associated mineral interests. The Reko Diq project is located in a mining district which has significant gold and copper porphyry deposits as part of an extended gold and copper belt. We paid cash consideration of \$123 million, including the cost of acquiring a claw-back right held by BHP Billiton and we are committed to fund our share of an exploration program at Reko Diq.

#### *Sale of South Deep Mine to Gold Fields Limited*

In fourth quarter 2006, we sold our 50% interest in the South Deep mine to Gold Fields for consideration of \$1.5 billion, of which approximately \$1.2 billion was paid in cash and the balance in Gold Fields shares with a value of \$308 million on closing. As with the sale of Placer Dome's Canadian operations to Goldcorp, the sale of South Deep to Gold Fields made sense strategically as we optimize our portfolio of operating mines by selling non-strategic assets. The results of the South Deep mine for 2006 have been presented under discontinued operations in the Financial Statements. A gain on sale of \$288 million was recorded on closing within discontinued operations. Our consolidated gold production and total cash costs per ounce statistics include South Deep up until November 30, 2006.

#### *Vend-in of assets to Highland*

On November 17, 2006, we entered into an agreement with Highland to transfer ownership of certain companies holding Russian and Kyrgyz licenses in return for 34.3 million Highland common shares, increasing our ownership of Highland from 20% to 34%. In effect, we have contributed our 50% interest in the Taseevskoye deposit, as well as other exploration properties in Russia and Central Asia, to Highland, thereby consolidating ownership of these properties under one company. As part of the transaction, we have seconded several of our employees to Highland, and have received two additional Board seats. Completion of the transaction occurred on December 15, 2006. On closing, the fair value of Highland common shares exceeded the carrying amount of assets exchanged by \$76 million. We recorded this difference as a gain of \$51 million in other income/expense to the extent of the ownership in Highland held by independent third parties, and the balance of \$25 million as a reduction in the carrying amount of our investment in Highland. The Fedorova PGM deposit is not included in this transaction.

#### **Consolidated Gold and Copper Production, Sales and Costs**

In 2006, gold production increased by about 3.2 million ounces over the prior period, primarily due to the acquired Placer Dome mines and also due to production from our new mines: Tulawaka, Lagunas Norte, Veladero and Cowal, partially offset by lower production at Goldstrike and Kalgoorlie.

Realized gold prices of \$541 per ounce in 2006 were \$102 higher than in 2005, principally due to higher market gold prices. Realized gold prices in 2006 reflect a reduction of \$532 million or \$63 per ounce due to i) \$165 million hedge accounting adjustments relating to the acquired Placer Dome gold hedge position, from the date of acquisition through the date the position was

eliminated and ii) \$367 million from the voluntary delivery of 1.2 million ounces into our fixed-price Corporate Gold Sales Contracts at average prices below the prevailing spot price. Cash margins on gold, representing the difference between realized gold selling prices and total cash costs, increased by \$47 per ounce, or 22% in 2006 compared to 2005, as gold price increases have more than offset increases in total cash costs over the same period. Excluding the impact of hedge accounting adjustments and deliveries into fixed-price Corporate Gold Sales Contracts, margins would have increased by \$110 per ounce or 52%. As of February 21, 2007, we fully eliminated the remaining fixed-price Corporate Gold Sales Contracts. We further expect to eliminate the entire Floating Spot-Price Gold Sales Contracts position through deliveries of gold production before the end of the second quarter of 2007. This is expected to result in a reduction to our net income and cash flow of \$572 million in first quarter 2007, and \$76 million in second quarter 2007 (assuming an average prevailing spot gold price of \$650 per ounce).

Realized copper prices also increased significantly over the course of 2006, reflecting the trend of higher market copper prices. The realized copper price for 2006 was reduced by \$28 million or \$0.07 per pound for hedge accounting adjustments primarily relating to premiums paid for copper put options purchased in early 2006. Future realized copper prices will be impacted by the copper-linked notes issued in 2006. Under this issuance, we will receive \$3.08 per pound for a total of 285 million pounds of copper sales in the period 2007 to 2009, including 129 million pounds in 2007. In February 2007, we entered into a transaction where we can participate in stronger copper prices up to \$3.50 per pound, while maintaining a floor price of \$3.00 per pound, on the remaining 274 million pounds of copper in copper-linked notes.

<sup>1</sup> Total cash costs and cost of sales both exclude amortization and inventory purchase accounting adjustments — see page 32.

<sup>2</sup> Excludes costs of sales related to discontinued operations and non-controlling interests.

<sup>3</sup> At market currency exchange and commodity rates.

Cost of goods sold on a per ounce basis for 2006 was higher than 2005 and 2004, primarily because, on average, costs at the acquired Placer Dome mines are higher than at our legacy mines. Costs also reflect the effects of rising commodities and consumables prices and processing of lower-grade ore at some mines, partly offset by lower-cost production in 2006 from Lagunas Norte that began operations in the second half of 2005. Royalty expenses increased in 2006 largely due to the impact of higher market gold prices.

### Results of Operating Segments

In our Financial Statements, we present a measure of historical segment income that reflects gold sales and copper sales at average consolidated realized gold and copper prices, respectively, less segment expenses and amortization of segment property, plant and equipment. Our segments mainly include producing mines and development projects. We monitor segment expenses using “total cash costs per ounce/pound/ton” statistics that represent segment cost of sales divided by ounces of gold, pounds of copper sold or tons processed in each period. The discussion of results for producing mines focuses on this statistic in explaining changes in segment expenses.

Conducting mining activities in certain countries outside North America subjects us to various risks and uncertainties that arise from carrying on business in foreign countries including: uncertain political and economic environments; war and civil disturbances; changes in laws or fiscal policies; interpretation of foreign taxation legislation; and limitations on repatriation of foreign earnings. We monitor these risks on an ongoing basis and mitigate their effects where possible, but events or changes in circumstances could materially impact our results and financial condition.

For projects, we prepare estimates of capital expenditures, reserves and costs to produce reserves. We also assess the likelihood of obtaining key governmental permits, land rights and other government

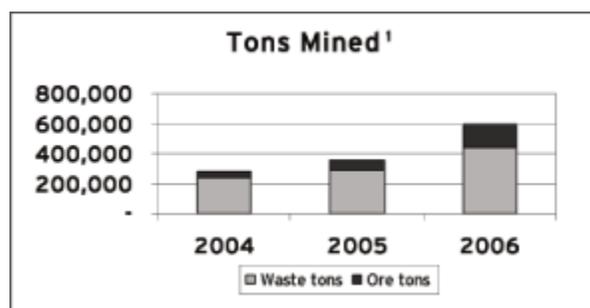

approvals. Estimates of capital expenditures are based on studies completed for each project, which also include estimates of annual production and production costs. Adverse changes in any of the key assumptions in these studies or other factors could affect estimated capital expenditures, production levels and production costs, and may affect the economic feasibility of a project. We take steps to mitigate potentially adverse effects of Changes in assumptions or other factors. Prior to the commencement of production, the segment results for projects reflect expensed mine start-up costs. For a discussion of our significant projects, see pages 23 to 31. See also note 4 to the Financial Statements for information on our reportable segments.

<sup>1</sup> The 2005 and 2004 comparative periods for copper have been omitted as we did not produce any significant amounts of copper prior to the production from the copper mines acquired with Placer Dome.

#### Consolidated Operational Trends — Gold

Over the past three years, we have seen an increasing trend of ore tons mined along with a higher proportion of waste tons, as a result of waste stripping at some of our mines. The higher tons mined and processed are due to a combination of opening new mines, the acquired Placer Dome mines and productivity improvements at our existing mines. The increase in tons processed has allowed us to increase gold production over the three-year period. We have been successful in containing mining costs per ton over the last three years, but the mining of more waste tons and higher processing costs per ton have been significant factors that have caused total cash costs per ounce to increase over this period.

<sup>1</sup> All amounts presented are based on equity production.

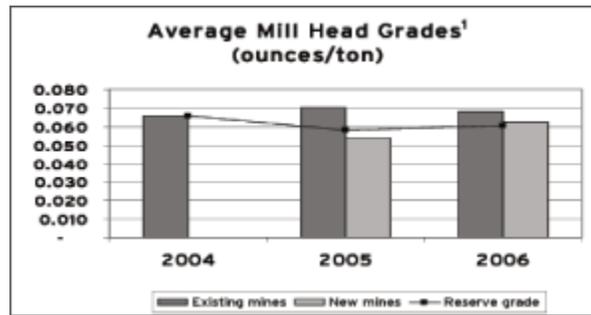

<sup>1</sup> All amounts presented are based on equity production.

<sup>2</sup> New mines include: Tulawaka, Lagunas Norte, Veladero and Cowal.

In 2006, total ore tons mined increased to a greater degree than tons processed. This is as a result of fewer tons placed on the leach pad at Round Mountain in 2006, due to layback work done earlier in the year, combined with reduced throughput at Kalgoorlie caused by harder ore. In 2007, we expect waste tons mined will increase due to higher waste stripping at some of our

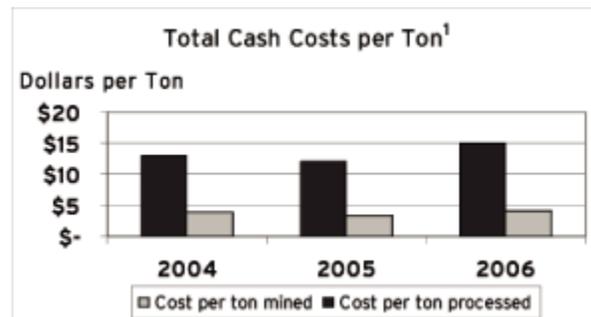

mines, particularly Goldstrike. High gold prices allow us to mine and process material in areas that were previously uneconomic in a lower gold price environment, which, while leading to higher average total cash costs, enables us to generate an operating contribution from low-grade material and extend mine lives. Process-related improvements have also resulted in improved

throughput and expanded capacity at some processing facilities. For example, ore chemistry effects that had temporarily limited throughput at the Goldstrike processing facilities during 2006 were partially mitigated by blending concentrate material with long-term stockpile ore.

<sup>1</sup> All amounts presented based on equity production. Average mill head grades are expressed as the number of ounces of gold contained in a ton of ore processed. Average mill head grades for new mines include those mines that have commenced production beginning in 2005 and into 2006 (Tulawaka, Lagunas Norte, Veladero and Cowal). Reserve grade represents expected grade over the life of the mine and is calculated based on reserves reported at the end of the immediately preceding year 2004 and 2005 data exclude reserve grades for former Placer Dome mines. 2006 data includes reserve grade data for Placer Dome mines based on reserve data from Placer Dome's fourth quarter 2005 report.

Average mill head grades in 2006 decreased slightly from 2005. This is primarily due to lower ore grades at Goldstrike, as a result of processing from low-grade long-term stockpiles in 2006, and at Kalgoorlie, due to lower than expected ore grades, partly offset by higher ore grades at our new Lagunas Norte mine. We have been mining close to average reserve ore grade in the past three years. In 2007, we expect average mill head grades to decrease as a result of processing from lower-grade stockpiles at Goldstrike for eight months of the year due to waste stripping in the open pit, and as a result of mining at or near reserve grade at Veladero and Lagunas Norte. With the processing of lower average ore grades and higher waste stripping, production is expected to decrease slightly in 2007 and total cash costs are expected to increase.

<sup>1</sup> Total cash costs per ounce/pound/ton statistics exclude amortization and inventory purchase accounting adjustments. Total cash costs per ounce/pound/ton is a performance measure that is used throughout this MD&A. For more information see pages 31 to 32.

Industry wide cost pressures for consumables and labor in particular have caused upward pressure on processing total cash costs per ton. A continuation of this trend, together with processing low-grade stockpiles at Goldstrike and higher waste tons mined due to waste stripping at some of our mines, are contributing to expected higher total cash costs per ounce in 2007.

## Operating Segments — Gold

### North America

## Producing Mines

Through the Placer Dome acquisition (after taking into account the sale of assets to Goldcorp) we acquired four producing mines in North America. The mines acquired from Placer Dome are Cortez (60% owned), Turquoise Ridge (75% owned) and Bald Mountain in Nevada, and Golden Sunlight in Montana. We also acquired three significant projects in North America: Cortez Hills, within the Cortez Joint Venture area of interest in Nevada (60% owned); Pueblo Viejo in the Dominican Republic (60% owned); and Donlin Creek in Alaska (30% owned with earn-in rights to 70%).

In 2006, the region produced 3.4 million ounces of gold (2005: 2.9 million ounces) at total cash costs of \$314 per ounce (2005: \$244 per ounce) in line with the guidance for 2006. The 18% increase in gold production over the prior year period was primarily due to the acquired Placer Dome operations, partially offset by lower production at Goldstrike, Eskay Creek and Round Mountain. Although gold production at Cortez lagged expectations earlier in 2006, due to layback work resulting in lower processed ore grades, full-year production was higher than expected due to better than planned ore grades encountered in the second half of 2006. At Golden Sunlight, production was lower than expected due to high-wall instability issues experienced during the first half of the year, which limited access to high-grade ore for the remainder of the year. Excavation and development of the new North Ramp pit access at the Golden Sunlight mine was completed in August and

ground monitoring equipment was put in place to help mitigate the impact of future slides, but the site is nonetheless vulnerable to continued high-wall instability challenges. We are advancing feasibility studies that could result in mine expansion and higher levels of production at Bald Mountain beginning in 2009, subject to the timing of permitting. Lower production from Goldstrike in 2006 was primarily attributed to lower-grade ore processed from the open-pit stockpiles and ore chemistry effects that temporarily limited throughput at the Goldstrike processing facilities. In fourth quarter 2006, we were able to partially mitigate the above ore chemistry effects by blending concentrate material with long-term stockpile ore. At Eskay Creek, fewer tons at lower grades are being mined as the mine reaches the end of its reserve life. At Round Mountain, layback efforts during the year as part of the planned pit expansion project, resulted in fewer ore tons mined and more waste. This was partly mitigated by higher than planned ore grades during the year.

Total cash costs per ounce increased by 29% over the prior year period. Higher costs resulted primarily from higher prices paid for input commodities and consumables used in the production process, and higher royalties and production taxes due to higher market gold prices. The region's major consumables such as tires, labor, cyanide, propane and diesel experienced an increase in price of 15% to 25%, which accounts for the majority of the increase in total cash costs per ounce. These cost increases were partially mitigated by higher than expected silver by-product credits at Eskay Creek due to high market silver prices (\$4 per ounce) and better than expected silver grades, and lower power costs at Goldstrike due to the commissioning of the Western 102 power plant. Year-to-date power savings from the Western 102 power plant, compared to local public utility rates, are estimated at \$9 per ounce for the Goldstrike property and \$5 per ounce for the region.

In 2007, we expect gold production of 3.150 to 3.250 million ounces at total cash costs of \$370 to \$385 per ounce from the North America region. Production is expected to be lower than 2006 as increases in production due to the start up of the Ruby Hill and Storm mines is expected to be more than offset by lower production at Goldstrike and Round Mountain. Goldstrike will be processing lower-grade ore stockpiles for about eight months of the year due to waste stripping in the open pit. Production is expected to be lower at Bald Mountain due to lower ore grades, partly offset by higher ore tons processed. Total cash costs per ounce for the region is expected to be higher than 2006 due to general inflationary cost pressures, the start up of the Ruby Hill and Storm mines, and higher waste tons mined at some of our mines.

### **Significant Projects**

Ruby Hill is an open pit mine with primarily oxide material. Actual construction costs are expected to be below the estimate of \$75 million, including almost \$30 million in new mining equipment and processing upgrades. Ore processing includes on-site gold recovery by zero-discharge heap leach and carbon column facilities. At the end of 2006, Ruby Hill had proven and probable reserves of 1.1 million ounces of gold. <sup>1</sup> First gold production occurred in February 2007 and the mine is expected to produce about 120,000 ounces at total cash costs of \$240 to \$250 per ounce for 2007.

Cortez Hills is our most advanced project and is currently in the permitting stage. The project involves the development of two adjacent deposits — Cortez Hills and Pediment — within the Cortez Joint Venture area of interest. The project will be developed as two open pits with part of the deposit potentially to be mined by underground mining methods. In 2006, activities included the procurement of mining equipment, the construction of the F-Canyon power line, and underground exploration decline development. Geological, geotechnical and hydrological site data continues to be collected for use in the underground pre-feasibility study. In 2007 we expect to advance exploration drilling by approximately 200,000 feet, and complete the detailed engineering and planning. The project construction budget is \$480 million to \$500 million <sup>2</sup> (100% basis). Construction activities are expected to last 15 months and will commence once the Environmental Impact Study Record of Decision is obtained, which is anticipated to be received in 2008. Our share of production from Cortez is expected to average 425-440 thousand ounces at total cash costs of \$315 to \$330 per ounce in the first 10 years after production commences from Cortez Hills.

In May 2006, a joint venture agreement with Goldcorp was finalized, which establishes Barrick as the 60% owner and operator of the Pueblo Viejo project. The Pueblo Viejo project is located in the Dominican Republic, 15 kilometers southwest of the provincial capital of Cotui and approximately 100 kilometers northwest of the national capital, Santo Domingo. The access to the property is via paved national highways which will require minor repairs to allow for transportation of heavy equipment to the site. We initiated a project

<sup>1</sup> For a breakdown of reserves and resources by category and additional information relating to reserves and resources, see pages 111-116 of the Year End Report 2006.

<sup>2</sup> Excluding capitalized interest.

review in March 2006 and must give notice to the government by February 2008 whether we plan to proceed with development. Since last March, we have updated capital costs estimates, re-evaluated the process flowsheet, optimize the project and carried out an exploration program. Our review has resulted in a new silver process that is expected to increase silver recovery from 5% to 84%; inclusion of a copper recovery circuit; and potential inclusion of a zinc recovery process (currently being tested). The project has high power requirements due to high levels of sulphur contained in the ore and we are investigating options for the sourcing of power. At year end, our share of proven and probable gold reserves at Pueblo Viejo was 10.9 million ounces.<sup>1</sup> We also reported measured and indicated resources of 1.3 million ounces and 2.7 million ounces in the inferred category.<sup>2</sup> Annual gold production in the first full five years of production is expected to be between 775 to 800 thousand ounces of gold at total cash costs of \$180 to \$190 per ounce. Concurrent with the review and update of the feasibility analysis, activities relating to government and community relations and environmental permitting for the mine are ongoing.

An updated capital cost estimate for the Pueblo Viejo project was completed in 2006. The revised cost estimate is \$2.1 billion to \$2.3 billion<sup>3</sup>, an increase from the \$1.35 billion estimated in the feasibility analysis prepared by Placer Dome in 2005. The increase is due to the effect of design adjustments, capital required to enable recovery of the by-product metals (copper, silver, and zinc) and significant inflationary cost pressures in the industry (reflecting the cost environment prevailing in late 2006). Our 2007 objectives are to complete engineering, confirm zinc assumptions and test program; complete negotiations with the government; finalize a power sourcing strategy; continue to expand the community development programs; and advance exploration and metallurgical programs.

The Donlin Creek project is a large refractory gold deposit in Southwestern Alaska, under lease from two Alaska aboriginal corporations until 2015 and for so long

- <sup>1</sup> Calculated in accordance with National Instrument 43-101 as required by Canadian securities regulatory authorities. For United States reporting purposes, Industry Guide 7, (under the Securities and Exchange Act of 1934), as interpreted by Staff of the SEC, applies different standards in order to classify mineralization as a reserve. Accordingly, for U.S. reporting purposes, Pueblo Viejo is classified as mineralized material. For a breakdown of reserves and resources by category and additional information relating to reserves and resources, see pages 111-116 of the Year End Report 2006.
- <sup>2</sup> For a breakdown of reserves and resources by category and additional information relating to reserves and resources, see pages 111-116 of the Year End Report 2006.
- <sup>3</sup> Excluding capitalized interest.

thereafter as mining operations are carried out on the property. The Donlin Creek property is being explored and developed under a Mining Venture Agreement (“MVA”) between NovaGold and Barrick, entered into in November 2002. Under the terms of that agreement, we currently hold a 30% interest in the project with the right to increase that interest to 70% by satisfying the following conditions on or before November 12, 2007: (1) funding of \$32 million of exploration and development expenditures on the project; (2) delivering a feasibility study to NovaGold meeting the requirements set out in the MVA; and (3) obtaining the approval of Barrick’s Board of Directors to construct a mine on the property. The funding condition was satisfied in March 2006. Since acquiring control of Placer Dome, we have moved decisively to ensure that the appropriate financial, technical and human resources are being devoted to the timely completion of the required feasibility study at Donlin Creek and fulfill the back-in requirements to increase our stake in Donlin Creek to 70%. In addition, we have assigned technical personnel from both inside of Barrick and externally to ensure that the challenges and opportunities of the project are properly assessed and exploited. In 2006, we spent approximately \$55 million to advance technical work relating to mine design, geotechnical engineering, metallurgical process design and environmental baseline studies. Approximately 92,800 meters of core drilling in 327 holes was completed by the end of 2006. Our share (at 30%) of measured and indicated resources has increased to 5.9 million ounces<sup>2</sup> from 4.4 million ounces noted at the beginning of the year due in part to the conversion of inferred resource ounces during the year. Our share of the inferred resource, as previously estimated by Placer Dome, has been reduced from 4.1 million ounces to 0.5 million ounces<sup>2</sup> due to the conversion of 1.5 million ounces to indicated status and the removal of 2.1 million ounces from the inferred category. In 2007, our project budget is \$87 million and includes costs to complete the pre-feasibility and feasibility studies. The 2007 drilling program includes 70,000 meters of infill drilling and in-pit exploration that is not required for the feasibility study. Government and local community relations will continue to be a focal point as the project moves forward.

## Producing Mines

In 2006, gold production in the region was 2.1 million ounces (2005:1.2 million ounces) at total cash costs of \$147 per ounce (2005: \$126 per ounce). Gold production increased by 71% over the prior year period mainly due to the benefit of a full year of production from both Lagunas Norte and Veladero, both of which commenced production in the second half of 2005. Production was higher than the initial guidance, mainly because of better than expected production from Lagunas Norte, which produced 1.1 million ounces as a result of increased capacity at the primary crusher and higher gold recovery rates. Veladero and Pierina both performed as planned, including strong fourth quarter 2006 gold production at Veladero after transitioning of mining from the Filo Mario pit to the higher-grade Amable Pit.

Despite industry wide inflationary cost pressures during 2006, including rising commodity prices, the South America region was able to limit the impact on its mining operations with the increasing contribution from low cost mines such as Lagunas Norte, as well as cost saving initiatives, with a particular emphasis on tire maintenance and diesel consumption. In 2006, total cash costs per ounce were lower than the initial guidance due to lower waste tons mined, resulting in lower mining costs, combined with higher ore grades at Lagunas Norte. In October 2006, industrial users of diesel fuel renewed their price control subsidy contracts with the Argentinean government. The contracts were renewed at market rates with the effect that our cost for diesel fuel has increased by about 30% from previously contracted rates. The effect of the price increase in 2006 was only about \$1 per ounce, while in 2007, the estimated effect is an increase in total cash costs for the region of \$6 per ounce. In 2006, we also incurred approximately \$8 million relating to a voluntary contribution in Peru that will be paid to benefit Peruvian communities. This amount has been recorded as part of other operating expense.

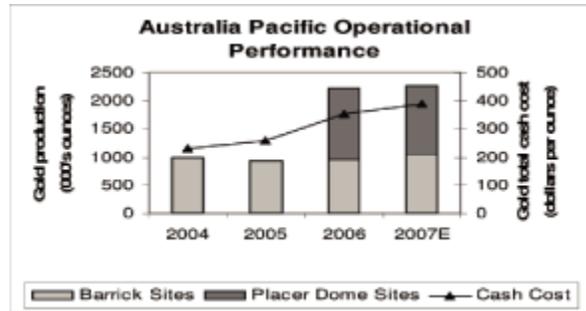

In 2007, we expect gold production of 1.850 to 1.925 million ounces at total cash costs of \$230 to \$245 per ounce. Production is expected to be lower than 2006 primarily due to lower ore grades at Lagunas Norte. Total cash costs per ounce are expected to be higher than 2006 due to the impact of lower production at Lagunas Norte, higher waste stripping costs at Veladero as mining transitions to the Filo Federico pit, combined with inflationary cost pressures.

## Significant Projects

In 2004, we made a decision to proceed with the development of the Pascua-Lama project, contingent on obtaining the necessary permits, approvals and resolving certain fiscal matters. The Pascua-Lama project is unique in that it is a bi-national project with a mineral deposit that spans the border between Argentina and Chile. It is located in the Frontera District within approximately 10 kilometers of our Veladero mine. The project is at an elevation of 3,800 to 5,200 meters. Pascua-Lama's proximity to Veladero is expected to provide benefits during both the construction phase and once operations have commenced, derived from shared infrastructure, local supplier development, training and employee development. As well, we expect that the construction of Pascua-Lama will benefit from our experience in constructing Veladero, a mine that was very similar in terms of the challenges for construction. In February 2006, the Pascua-Lama project was granted approval by the Chilean environmental regulatory authorities in Resolution RCA 024. The Resolution imposes other conditions on the development of the project, the implications of which have resulted in the reclassification of about 1 million ounces of reserves to mineralized material for reporting purposes. In December 2006, the Province of San Juan, Argentina issued its Declaration of Environmental Impact Assessment which approves the environmental permit submission in Argentina. We are developing detailed engineering plans and have begun submission of documentation to obtain the administrative and sectoral approvals and permits that are required prior to initiating construction in either country. In addition, the governments of Chile and Argentina must resolve certain remaining fiscal matters, including taxation, relating to the bi-national project. The timing of receipt of approvals for permitting and licensing, cross-border approvals and operating issues and fiscal tax and royalty items are largely beyond the control of the Company. The project team is using this period to advance activities possible within the current permitting outline, including site topography and control surveys, as well as detailed geotechnical and geotectonic information required for sectoral permitting.

At the end of 2006, Pascua-Lama had gold reserves of 17.0 million ounces <sup>1</sup>, 1.4 million ounces less than previously estimated due principally to the reclassification of approximately 1 million ounces of reserves to mineralized material as a result of the conditions of the Resolution. Pascua-Lama also has 689 million ounces of silver and 565 million pounds of copper contained in the gold reserves. <sup>1</sup> In 2006, we updated our feasibility study, including capital and operating cost estimates for the Pascua-Lama project from those estimates that were previously completed in June 2004. The total estimated cost of construction is \$2.3 billion to \$2.4 billion, an increase from the previous cost estimate of \$1.4 to \$1.5 billion <sup>2</sup> provided in July 2004. The increase in capital cost is due primarily to inflationary cost pressures (reflecting the cost environment prevailing in late 2006). Although inflationary cost pressures have increased the capital and operating cost estimates at Pascua-Lama, we are currently evaluating possible improvement opportunities that may enhance project economics. Initial annual gold production in the first five years at Pascua-Lama is expected to be between 750 to 775 thousand ounces at total cash costs of \$40 to \$50 per ounce.

### Australia Pacific

### Producing Mines

Through the Placer Dome acquisition, we acquired four producing gold mines and a copper-gold mine. The acquired Placer Dome gold mines are Porgera (75% owned) in Papua New Guinea, and Kanowna, Granny Smith and Henty, in Australia. Gold production for the region in 2006 was 2.2 million ounces (2005: 0.9 million ounces), at total cash costs of \$353 per ounce (2005: \$257 per ounce). The increase in gold production in 2006 was mainly due to the contribution from the acquired Placer Dome mines, combined with production start-up at our newly constructed Cowal mine, partially offset by lower production from Kalgoorlie. Total gold production for 2006 was slightly below the initial guidance, mainly due to lower production at Kalgoorlie and a small delay in the startup at Cowal.

<sup>1</sup> For a breakdown of reserves and resources by category and additional information relating to reserves and resources, see pages 111-116 of the Year End Report 2006.

<sup>2</sup> Excluding capitalized interest.

Total cash costs per ounce were higher in 2006 compared to the prior year, and also higher than the most recent guidance issued in second quarter 2006 of \$330 to \$345 per ounce, due to higher currency exchange rates and higher costs for labor and input commodities, including diesel fuel. Higher maintenance costs, as equipment fleets age, and the lower production levels at some mines also contributed to the higher total cash costs per ounce. To help mitigate rising oil prices and control the cost of fuel consumption, we put in place a fuel hedge position.

At Kalgoorlie, production in 2006 was lower than the prior year due to reduced throughput caused by harder ore, together with lower than expected ore grades. Throughput improvements were expected through the replacement of a damaged girth gear earlier in the year, but these improvements were offset by the effect of more abrasive, harder ore than originally anticipated. A number of improvement programs have been commenced, designed to address key issues such as shovel and truck productivity and mill throughput.

At Porgera, remediation of the West Wall cutback has precluded mining of Stage 5 of the pit, with consequent lower production levels until mining of higher grade ore recommences. Installation of a buttress was completed in December 2006, and the mine is in the process of removing the buttress ramps, which is the critical path to recommence mining on Stage 5. We expect the first blast to take place in February 2007. Mill feed at Porgera in 2006 principally came from low-grade long-term stockpiles. On December 13, 2006, an explosion caused by a lightning strike resulted in substantial damage to the Hides Power Station, Porgera's main source of power. There were no serious injuries, but extensive damage to the power station resulted in a reduction of production capacity to approximately half of normal levels. We expect that production will return to normal levels near the end of the first quarter 2007, after repairs to the power station are completed. A claim under our business interruption insurance policy has been initiated to compensate for the lost production.

Our newly constructed Cowal mine went into production in May of 2006. The total cost of construction of the mine was \$417 million. The projected cost of construction exceeded the \$335 million previously estimated in 2005 due to construction delays that resulted in an increase in the construction workforce as attempts were made to meet the planned timing of the

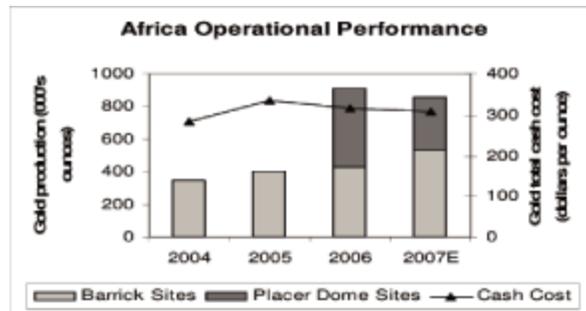

project, and due to greater than expected input costs, including labor, contractors, steel and fuel. Gold production was below expectation during the start-up phase as the grade of the soft oxide ore underperformed against plan, but has since improved with the installation of the ball mill. Production during first quarter 2007 could be impacted by a shortage of process water as a result of the drought affecting the area. To mitigate the effects of the drought, we have secured supplies of water from alternate sources and are in the process of constructing additional water storage facilities.

In November 2006, we signed a sale agreement for disposition of our Paddington operations in Australia for \$39 million. The Paddington operations, which form part of our Kanowna mine acquired in the acquisition of Placer Dome, consist of the Paddington mill and certain tenements in the region near the mill. The transaction is expected to close in the first quarter of 2007.

In 2007, we expect gold production of 2.2 to 2.3 million ounces at total cash costs of approximately \$385 to \$400 per ounce. Gold production is expected to be similar to 2006, with higher production from Porgera and Cowal offset by lower production at Kanowna and Granny Smith. The expected increase in production is primarily due to higher ore grades at Porgera and the first full year of production from Cowal. The expected decrease at Kanowna is due to lower production as a result of the sale of the Paddington assets. At Granny Smith, lower ore grades are expected due to the depletion of the Wallaby open pit deposit and the processing of low grade stockpiles. Total cash costs per ounce are expected to be higher in 2007 due to a higher average currency hedge rate combined with higher waste tons mined at some mines and inflationary cost pressures relating to labor and other consumables.

## Africa

## Producing Mines

Through the Placer Dome acquisition, we acquired two producing gold mines in Africa, South Deep (50%) in South Africa, and North Mara in Tanzania. As described on page 20, we completed the sale of South Deep to Gold Fields in 2006. Gold production for 2006 was 0.9 million ounces (2005: 0.4 million ounces), at total cash costs of \$315 per ounce (2005: \$336 per ounce). Gold production and total cash costs per ounce were both within the ranges of guidance issued for 2006. Production for 2006 was higher than the prior year due to the contribution from the acquired Placer Dome mines, together with higher production at Bulyanhulu and Tulawaka. North Mara's production was positively impacted by the results of mining the Gokona ore body rather than processing of predominantly lower grade stockpiles. At Tulawaka, higher production in 2006 was a result of more hours available to process material, as well as higher ore grades and increased throughput due to the processing of softer oxide ore. Production at Bulyanhulu improved as a result of the completion of projects to remove technical constraints to hoisting and plant throughput rates.

Production at South Deep was lower than expected as a result of the skip accident that occurred in second quarter 2006. A fully loaded skip fell down the main shaft in May during routine maintenance, resulting in the restricted production for the remainder of the year being hoisted from the lower capacity south shaft. An underground fire broke out in August 2006, resulting in some of the higher grade mining areas becoming inaccessible during the remainder of 2006, which also impacted gold production levels.

During fourth quarter 2006, we reached an agreement in principle with the Tanzanian government to make additional annual payments under the Mining and Development Agreements ("MDA"). Under the agreement, Barrick will pay \$7 million per year to the Government, and has committed to make more use of Tanzanian supplies and services. We expect the agreement to be concluded early in 2007 and we have accrued \$7 million at December 31, 2006. This amount has been recorded in other operating expense in the Financial Statements. The payment of this amount will be reviewed by both parties should economic conditions deteriorate.

Higher production at North Mara, Bulyanhulu and Tulawaka, partly offset by higher labor and contractor costs, had a favorable impact on total cash costs per ounce compared to the prior year. Increases in labor cost for the region caused an increase in total cash costs of approximately \$6 per ounce. As with our mines in other regions, higher input commodity prices are leading to higher cash costs. In the Africa region, input commodity prices are controlled by means of using preferred suppliers. Freight and shipping costs are significant, but through proper planning and logistics,

freight and shipping costs on input commodities can be effectively controlled. The regional supply chain team is in the process of implementing forward purchase agreements on critical supply items.

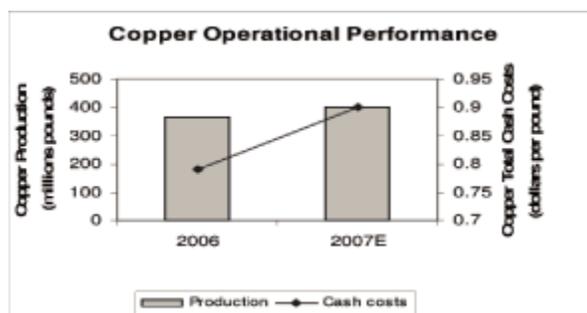

At South Deep, business interruption insurance has mitigated the impact on total cash costs of the skip accident in the main shaft. In 2006, insurance proceeds related to the skip accident, included in total cash costs, including the share attributed to Gold Fields, totaled \$22 million. Substantially all insurance proceeds related to the underground fire will be to the account of Gold Fields.

In 2007, we expect gold production of 0.825 to 0.875 million ounces at total cash costs of \$310 to \$325 per ounce from the Africa region. We expect lower production in 2007 as increases in production at Bulyanhulu and Tulawaka are more than offset by the impact of the sale of our 50% interest in South Deep in late 2006, in which our share of production in 2006 was approximately 124,000 ounces. Total cash costs per ounce for the region are expected to be slightly lower than 2006 primarily as a result of the sale of the higher cost South Deep mine and higher production at Tulawaka, partially offset by higher labor and consumables costs.

### Significant Projects

The Buzwagi project is located within the highly prospective Lake Victoria Greenstone Belt in Tanzania on excellent terrain, which is relatively flat, open land. This is expected to simplify project execution. Buzwagi's proximity to our other operations in the area (Bulyanhulu and Tulawaka) is expected to benefit its operations due to shared infrastructure, training and employee development. In addition, Buzwagi has the best access to infrastructure of all our Tanzanian properties. A paved road connects the site to a rail line that passes only 40 kilometers from the property. Buzwagi has a proven and probable reserve of 2.6 million ounces and measured and indicated resources of 0.4 million ounces of gold. <sup>1</sup> In 2006, activities included exploration drilling and the completion of a feasibility study. In early 2007, the MDA was approved by the Tanzanian government. We are now awaiting approval of the Environmental Impact Assessment, which is expected to be approved by the end of first quarter 2007. Following approval, we intend to start the two-year construction phase in late 2007, at an estimated total cost of \$400 million. <sup>2</sup> The team that is currently in place to build Buzwagi is virtually unchanged from the team that built Tulawaka.

### Operating Segments — Copper

With the acquisition of Placer Dome, we acquired Zaldívar, a copper mine in Chile, and Osborne, a copper-gold mine in Australia. At Zaldívar, we produced 308 million pounds of copper in 2006 at total cash costs of \$0.62 per pound. Zaldívar exceeded targeted production, despite damage to the stockpile building and conveyor in June 2006. Temporary repairs were made over a matter of weeks to mitigate the effects on production schedules and the new building will be erected as part of scheduled maintenance in early 2007. Total cash costs per pound were better than expected due to the higher production levels achieved.

At Osborne, copper production in 2006 was 59 million pounds of copper at total cash costs of \$1.53 per pound. Production in 2006 was slightly below guidance due to lower ore grades and throughput as a result of delays in the construction of a paste fill plant. The delays restricted access to the higher-grade ore areas of the underground mine. The total cash costs per pound for the year were above guidance mainly because of the lower production.

In 2006, we met our guidance for consolidated copper production and total cash costs per pound. In 2007, we expect to produce about 400 million pounds of copper at total cash costs of about \$0.90 per pound. We expect higher copper production from Zaldívar in 2007, primarily because of the higher grade ore mined and placed on the leach pad in 2006 that will be produced in 2007. At Osborne, the paste fill plant is expected to be operational late in first quarter 2007 and will provide access to higher-grade ore blocks. The open-pit project at Osborne, Trekelano commenced production during fourth quarter 2006 and is now supplementing the ore supply from underground. The ore grade from Trekelano

<sup>1</sup> Calculated in accordance with National Instrument 43-101 as required by Canadian securities regulatory authorities. For United States reporting purposes, Industry Guide 7, (under the Securities and Exchange Act of 1934), as interpreted by Staff of the SEC, applies different standards in order to classify mineralization as a reserve. Accordingly, for U.S. reporting purposes, Buzwagi is classified as mineralized material. For a breakdown of reserves and resources by category and additional information relating to reserves and resources, see pages 111-116 of the Year End Report 2006.

<sup>2</sup> Excluding capitalized interest.

is lower, but is expected to complement the higher-grade underground ore sources and allow higher throughput rates to be achieved in 2007.

Total cash costs per pound at Zaldivar are expected to be higher than 2006 due to higher prices for commodities and consumables as well as inflationary cost pressures. Total cash costs per pound at Osborne are expected to be lower in 2007 due to higher production.

### **Other Significant Projects**

In April 2005, we entered into a joint-venture agreement with Falconbridge Limited ("Falconbridge") with respect to the Kabanga nickel deposit and related concession in Tanzania. In 2006, Xstrata Plc ("Xstrata") acquired Falconbridge. Xstrata is the operator of the joint venture and the project is currently in the pre-feasibility stage. Kabanga, which is one of the largest undeveloped nickel sulphide deposits in the world, is located in northwest Tanzania. The property is approximately 385 kilometers from Bulyanhulu and approximately 200 kilometers west of Tulawaka and is accessible by paved/gravel roads. In 2006, ongoing diamond drilling, exploration and other project development engineering activities being managed by Xstrata have been performed as part of a work plan to prepare an updated resource model and scoping study. Xstrata has recently completed the \$50 million work plan that was contemplated in the joint venture agreement. At December 31, 2006 our share of indicated nickel resources at Kabanga was 254 million pounds of nickel. <sup>1</sup> We also had inferred resources of 1.1 billion pounds of nickel. <sup>1</sup> This is an increase from prior estimates and is the result of the recently discovered Tembo and Tusker zones. The new discoveries at Tembo and Tusker are near surface and at good ore grade and have the potential to significantly enhance the economics of the Kabanga project. In 2007, Xstrata plans to prepare a pre-feasibility study. In accordance with the joint venture agreement, Xstrata has committed to spend an additional \$95 million, which will be used to fund the pre-feasibility study with funds remaining for other subsequent activities. After the \$95 million spent by Xstrata, funding will be shared equally by Barrick and Xstrata.

Sedibelo is a large platinum deposit in South Africa. The Sedibelo platinum project is located in northern South Africa within the Western Limb of the prolific Bushveld Igneous Complex ("Bushveld"). The Bushveld is the source of 80% of the world's platinum reserves and 70% of the world's platinum production. As operator of the project, we have a 50% earn-in right to this project. We will earn a 10% interest on completion of a feasibility study and an additional 40% interest once a decision to construct a mine has been made. We will fund the exploration and feasibility study. Funding during the construction of the mine will be shared 50% by each of the partners. In 2006, we commenced work on a pre-feasibility study. At December 31, 2006, the deposit had 3.8 million ounces of measured and indicated platinum resources. <sup>2</sup> The project also had 5.3 million ounces of inferred platinum resources. <sup>2</sup> Mineralization is close to surface which is expected to facilitate a possible open pit mine. In 2007, we expect to spend about \$26 million to complete a pre-feasibility study as well as for other drilling and planning activities.

Fedorova is a palladium and platinum development project with nickel, copper and gold by-products located in the Kola Peninsula of the Russian Federation. We own 50% (with an earn-in right to 79%) of Fedorova. We are also the operator. Fedorova is a large near surface PGM (platinum group metals) deposit. At December 31, 2006 we had 1.1 million ounces of palladium and 0.3 million ounces of platinum resources categorized to measured and indicated status. <sup>1</sup> We also had 1.3 million ounces of palladium and 0.3 million ounces of platinum resources categorized to inferred resources. <sup>1</sup> With regard to smelting, work to date indicates recoveries are good. The 2006 drilling program has allowed for the completion of a pre-feasibility study and has provided the necessary support to declare our equity portion of Fedorova as a resource. In 2007, we expect to spend \$30 million towards the completion of a feasibility study, including approximately 60,000 meters of drilling.

### **Exploration Strategy**

Our exploration strategy for 2007 will focus on the replacement of mine production through a combination of exploration, corporate development and project development. Our 2007 budget is \$170 million and is weighted towards near-term discovery around our existing operations while still maintaining a balanced portfolio in order to generate projects for the future. A significant portion of our budget will be spent in Nevada, our key district. Exploration will also be focused in the Frontera District around Pascua-Lama and Veladero. Drill testing of targets in the vicinity of the Veladero mine (Filo Sur) is underway, where the goal is to define

---

<sup>1</sup> For a breakdown of reserves and resources by category and additional information relating to reserves and resources, see pages 111-116 of the Year End Report 2006.

<sup>2</sup> Calculated as at December 31, 2006 in accordance with capital and National Instrument 43-101 as required by Canadian securities regulatory authorities. Calculations have been prepared by or under the supervision of Hannes Henckel, Manager Exploration and Geology of Barrick. Sedibelo measured and indicated resources have been estimated using varying cut-off rates, as applicable, depending on the ore type, and other relevant factors.

reserves and resources close to existing mine infrastructure.

We indirectly own a 37.5% interest in Reko Diq through our investment in Atacama. Reko Diq is a large copper-gold porphyry mineral resource on the Tethyan belt, located in southwest Pakistan in the province of Baluchistan. The Tethyan belt is a prospective ground for large copper-gold porphyries. At December 31, 2006, our share of measured and indicated copper resources at Reko Diq was 5.7 billion pounds of copper.<sup>1</sup> We also had inferred copper resources of 4.3 billion pounds of copper.<sup>1</sup> In 2006, 25,030 meters of exploration drilling was completed. A \$30 million budget (100% basis) has been approved for 2007, including a scoping study, exploration activities including 69,000 meters of drilling, preparation of an updated resource model and construction of an airstrip.

### **Total Cash Costs Performance Measures**

Total cash costs include all costs absorbed into inventory, including royalties, by-product credits, production taxes and accretion expense, and exclude inventory purchase accounting adjustments and amortization. The presentation of these statistics in this manner allows us to monitor and manage those factors that impact production costs on a monthly basis. We calculate total cash costs based on our equity interest in production from our mines. Total cash costs per ounce/pound/ton are calculated by dividing the aggregate of these costs by gold ounces, copper pounds sold or ore tons processed. Total cash costs and total cash costs per ounce/pound/ton are calculated on a consistent basis for the periods presented. In our income statement, we present amortization separately from cost of sales. Some companies include amortization in cost of sales, which results in a different measurement of cost of sales in the income statement. We have provided below reconciliations to illustrate the impact of excluding amortization and inventory purchase accounting adjustments from total cash costs per ounce/pound/ton statistics. Under purchase accounting rules, we recorded the fair value of acquired work in progress and finished goods inventories as at the date of the Placer Dome acquisition. As the acquired inventory is sold, any purchase accounting adjustments reflected in the carrying amount of inventory at acquisition impact cost of sales. The method of valuing these inventories is based on estimated selling prices less costs to complete and a reasonable profit margin. Consequently, the fair values do not necessarily reflect costs to produce consistent with ore mined and processed into gold and copper after the acquisition.

We believe that using an equity interest presentation is a fairer, more accurate way to measure economic performance than using a consolidated basis. For mines where we hold less than a 100% share in the production, we exclude the economic share of gold production that flows to our partners who hold a non-controlling interest. Consequently, for the South Deep and Tulawaka mines, although we fully consolidated these mines in our Financial Statements, our production and total cash cost statistics only reflect our equity share of the production.

In managing our mining operations, we disaggregate cost of sales between amortization and the other components of cost of sales. We use total cash costs per ounce/pound/ton statistics as a key performance measure internally to monitor the performance of our regional business units. We use these statistics to assess how well our regional business units are performing against internal plans, and also to assess the overall effectiveness and efficiency of our mining operations. We also use amortization costs per ounce/pound/ton statistics to monitor business performance. By disaggregating cost of sales into these two components and separately monitoring them, we are able to better identify and address key performance trends. We believe that the presentation of these statistics in this manner in our MD&A, together with commentary explaining trends and changes in these statistics, enhances the ability of investors to assess our performance. These statistics also enable investors to better understand year-over-year changes in cash production costs, which in turn affect our profitability and ability to generate cash flow.

The principal limitation associated with total cash costs per ounce/pound/ton statistics is that they do not reflect the total costs to produce gold/copper, which in turn impacts the earnings of Barrick. We believe that we have compensated for this limitation by highlighting the fact that total cash costs exclude amortization and inventory purchase accounting adjustments as well as providing details of the financial effect. We believe that the benefits of providing disaggregated information outweigh the limitation in the method of presentation of total cash costs per ounce/pound/ton statistics.

Total cash costs per ounce/pound/ton statistics are intended to provide additional information, do not have any standardized meaning prescribed by US GAAP and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with US GAAP. The measures are not necessarily

---

<sup>1</sup> For a breakdown of reserves and resources by category and additional information relating to reserves and resources, see pages 111-116 of the Year End Report 2006.

indicative of operating profit or cash flow from operations as determined under US GAAP. Other companies may calculate these measures differently.

### Illustration of Impact of Excluding Certain Costs from Total Cash Costs from Total Cash Costs per Ounce/Pound/Ton

<sup>1</sup> The 2005 and 2004 comparative periods for copper have been omitted as we did not produce any significant amounts of copper prior to the production from the copper mines acquired with Placer Dome.

<sup>2</sup> The aggregate amount of cost of sales for gold and copper is as per Barrick's income statement.

<sup>3</sup> Relates to a 30% interest in Tulawaka and a 50% interest in South Deep.

<sup>4</sup> Based on our equity interest.

<sup>5</sup> Includes amortization, amounts attributable to non-controlling interests and inventory purchase accounting adjustments.

## Other Costs and Expenses

### Exploration, Development and Business Development Expense

| (\$ millions)      | 2006         | 2005         | 2004        | Comments on significant variances   |
|--------------------|--------------|--------------|-------------|---|
| <b>Exploration</b> |              |              |             |   |
| North America      | \$ 64        | \$ 34        | \$30        | 2006 vs. 2005 — Expenditures are higher in 2006 due to activities at Goldstrike, Cortez, Bald Mountain, Round Mountain and Pueblo Viejo.                        |
| South America      | 22           | 19           | 20          | 2006 vs. 2005 — Expenditures are higher in 2006 due to activities at Lagunas Norte and Veladero.  |
| Australia Pacific  | 44           | 13           | 17          | 2006 vs. 2005 — Expenditures are higher in 2006 due to activities at Porgera and other Papua New Guinea exploration properties, Cowal, Plutonic and Kalgoorlie. |
| Africa             | 22           | 34           | 23          | 2006 vs. 2005 — Lower activity at Buzwagi, partly offset by higher expenditures at Nyanzaga. 2005 vs. 2004 — Higher activity at Bulyanhulu.                     |
| Other              | 19           | 9            | 6           | 2006 vs. 2005 — Higher activity in Indonesia and Eurasia.   |
| <b>Total</b>       | <b>\$171</b> | <b>\$109</b> | <b>\$96</b> |   |

### Project Development Expense

| (\$ millions)                   | 2006         | 2005        | 2004        | Comments on significant variances   |
|---------------------------------|--------------|-------------|-------------|---|
| Mine development                | \$ 78        | \$ 2        | \$15        | 2006 vs. 2005 - In 2006, expenditures were higher principally due to activities at acquired Placer Dome projects including Donlin Creek, Pueblo Viejo and Sedibelo. 2005 vs. 2004 - In 2004, Lagunas Norte development costs were expensed for part of the year.  |
| Non-capitalizable project costs | 24           | 20          | 12          | Non-capitalizable costs mainly represent items incurred in the development/construction phase that cannot be capitalized. 2006 vs. 2005 -Costs are higher in 2006 due to higher start-up costs at Buzwagi, Taseevskoye and Pascua-Lama. 2005 vs. 2004 - Higher amounts for Cowal, Pascua-Lama and Veladero. |
| Business development/other      | 17           | 10          | 18          | In 2006 expenditures were higher due to increase in research and development activity.  |
| <b>Total</b>                    | <b>\$119</b> | <b>\$32</b> | <b>\$45</b> |   |

<sup>1</sup> For explanation of changes in sales volumes refer to page 20.

<sup>2</sup> Other includes increases/decreases in amortization expense due to additions/dispositions of property, plant and equipment, purchase accounting adjustments and the impact of historic changes in reserve estimates on amortization (refer to page 32).

Amortization expense recorded in the first nine months of 2006 reflects preliminary purchase price allocations for the acquired Placer Dome mines. In fourth quarter 2006, valuations for the acquired mines were finalized, at which time amortization calculations were prospectively recorded to reflect adjustments to the preliminary allocation. On finalization of the purchase price allocation, we recorded amortization of purchase price adjustments related to property plant and equipment totaling \$29 million in fourth quarter 2006.

The amount recorded for all of 2006 was \$47 million. We expect amortization expense to increase in 2007, primarily due to the final purchase price allocation for Placer Dome mines.

### Corporate Administration, Interest Income and Interest Expense

MANAGEMENT'S DISCUSSION AND ANALYSIS

On September 7, 2006 a fire occurred in the underground part of the Central Shaft at Highland's Darasun mine. Highland's management is currently uncertain of the amount of damage and potential impairment, if any, at Darasun as necessary valuations and engineering studies have not been completed at the date of this MD&A.

## Income Taxes

| <b>Total</b>   |                |                    | <b>\$ 348</b>                 |                |                    | <b>\$ 60</b>                  |                |                    | <b>\$ (203)</b>               |

Income tax expense increased in 2006 in comparison to 2005 primarily due to the increase in pre-tax income. Our underlying tax rate increased to 27% in 2006 primarily due to the impact of a higher amount of deliveries into gold sales contracts in a low tax-rate jurisdiction at prices below the prevailing spot market gold price than in 2005.

The underlying tax rate is expected to be approximately 30% for 2007. This expected underlying rate excludes the effect of gains and losses on non-hedge derivatives, the effect of delivering into gold sales contracts in a low tax-rate jurisdiction at prices below prevailing market prices, any tax rate changes, and any release of deferred tax valuation allowances. In first and second quarter 2006, the expected deliveries into Floating Spot-Price Gold Sales Contracts are expected to cause an increase in our reported effective tax rate because most of the deliveries will occur in a low tax-rate jurisdiction (see page 47).

We record deferred tax charges or credits if changes in facts or circumstances affect the estimated tax basis of assets and therefore the amount of deferred tax assets or liabilities or because of changes in valuation allowances reflecting changing expectations in our ability to realize deferred tax assets. In 2006, we released \$25 million of valuation allowances in the United States due to the estimated effect of higher market gold prices on the ability to utilize deferred tax assets. We released \$9 million of valuation allowances in a Chilean entity due to the availability of income. We released valuation allowances of \$19 million in Canada reflecting utilization of capital losses. In 2005, we released valuation allowances totaling \$32 million, of which \$31 million related to Argentina, in anticipation of higher levels of future taxable income after production began at Veladero, and also due to the impact of higher market gold prices. In 2004, we recorded a tax credit of \$141 million on final resolution of a Peruvian tax assessment in our favor, as well as the reversal of other accrued costs totaling \$21 million (\$15 million post-tax). We also recorded credits of \$81 million due to a change in tax status in Australia following an election that resulted in a revaluation of assets for tax purposes; as well as an election to file tax returns in US dollars, rather than Australian dollars. In 2005, we revised our estimate of the revaluation of assets for tax purposes due to the change in status, and recorded a further deferred tax credit of \$5 million.

In 2006, an interpretative decision ("ID") was issued by the Australia Tax Office that clarified the tax treatment of currency gains and losses on foreign currency denominated liabilities. Under certain conditions, for taxpayers who have made the functional currency election, and in respect of debt that existed at the time the election was made, the ID provided clarification that unrealized foreign exchange gains that currently exist on intercompany debt will not crystallize upon repayment of the debt. The effect of the ID was recorded as a \$31 million increase to deferred tax assets.

In second quarter 2006, a new federal rate change was enacted in Canada that lowered the applicable tax rate. The impact of this rate change was to reduce net deferred tax assets in Canada by \$34 million that was recorded as a component of deferred income tax expense. Also in second quarter 2006, on the change of the tax status of a Canadian subsidiary, we recorded a deferred income tax credit of \$22 million, to reflect the impact on the measurement of deferred income tax assets and liabilities.

The interpretation of tax regulations and legislation and their application to our business is complex and subject to change. We have significant amounts of deferred tax assets, including tax loss carry forwards, and also deferred tax liabilities. Potential changes to any of these amounts, as well as our ability to realize deferred tax assets, could significantly affect net income or cash flow in future periods. For more information on tax valuation allowances, see page 55.

<sup>1</sup> Adjusted for the impact of reclassifying sales from our South Deep mine to discontinued operations.

Our financial results for the last eight quarters reflect the following general trends: rising spot gold prices with a corresponding rise in prices realized from gold sales, rising gold production and sales volumes as our new mines began production in 2005 and 2006 and, in first quarter 2006, our acquisition of Placer Dome. Results in 2006 benefited from the contribution of gold and copper mines acquired in the Placer Dome acquisition. Although these trends continued in the second half of 2006, earnings in third quarter 2006 were reduced by post-tax adjustments of \$25 million related to revisions to the AROs at a closed mine and \$12 million for non-hedge derivative losses. In fourth quarter 2006, sales and earnings were reduced as a result of the delivery of gold ounces into gold sales contracts at a post-tax opportunity cost of \$312 million. The effect on income of this charge was partially mitigated by a post-tax gain of \$288 million from the sale of the South Deep mine. The historic trends are discussed elsewhere in this MD&A. The quarterly trends are consistent with explanations for annual trends over the last two years. Net income in each quarter also reflects the timing of various special items that are presented in the table on page 18.

**Fourth Quarter Results**

In fourth quarter 2006, we produced 2.4 million ounces of gold at total cash costs of \$287 per ounce compared to 1.6 million ounces at total cash costs of \$221 per ounce in the prior-year quarter. We also produced 100 million pounds of copper at total cash costs per pound of \$0.82 during the quarter from two copper mines acquired with Placer Dome. Revenue for fourth quarter 2006 was \$1,348 million on gold sales of 2.3 million ounces and copper sales of 100 million pounds, compared to \$776 million in revenue on just gold sales of 1.7 million ounces for the prior-year quarter. Sales volumes increased due to the contribution from new mines that began production in 2005 and 2006, combined with sales from mines acquired with Placer Dome. During the quarter, spot gold prices averaged \$614 per ounce. We realized an average price of \$461 per ounce during the quarter compared to the average spot price of \$486 per ounce and an average realized price of \$467 per ounce in the prior-year quarter. The realized price of gold was substantially lower than the average spot-price due to delivery of 1.0 million ounces into gold sales contracts at an opportunity cost of approximately \$143 per ounce. We also recorded hedge accounting adjustments of \$8 per ounce associated with legacy Placer Dome gold hedges. Earnings for fourth quarter 2006 were \$418 million (\$0.48 per share on a diluted basis), \$243 million (\$0.16 per share on a diluted basis) higher than the prior-year quarter. The increase in earnings over the prior-year quarter reflects higher gold sales volumes and realized gold prices, combined with earnings from copper sales, partly offset by the impact of special items.

In fourth quarter 2006, we closed the sale of the South Deep mine to Gold Fields. The consideration was \$1.5 billion, of which \$1.2 billion was paid in cash and \$308 million in Gold Fields shares. On closing, we recorded a gain of \$288 million, representing the consideration received less the carrying amount of net assets of South Deep, including goodwill relating to South Deep of \$651 million. Also in the fourth quarter, we recorded a \$51 million gain on closing of the vend-in to Highland.

## Effect on Earnings Increase (Decrease)

| Highland vend-in   | 51                             | 51             | —              | —              |
| Peru voluntary contribution  | (8)                            | (6)            | —              | —              |
| Opportunity cost of deliveries into fixed-Price Corporate Gold Sales Contracts       | (327)                          | (312)          | (33)           | (33)           |
| Hedge accounting adjustments related to the acquired Placer Dome gold hedge position | (18)                           | (11)           | —              | —              |
| <b>Total</b>   | <b>\$ (72)</b>                 | <b>\$ (28)</b> | <b>\$ (49)</b> | <b>\$ (45)</b> |

In fourth quarter 2006, we generated operating cash flow of \$337 million compared to operating cash flow of \$269 million in the prior-year quarter. The positive effects of higher gold sales volumes and higher realized gold prices were offset by the \$327 million opportunity cost of deliveries into fixed-price Corporate Gold Sales Contracts during fourth quarter 2006.

## LIQUIDITY, CAPITAL RESOURCES AND FINANCIAL POSITION

### Cash Flow

#### Operating Activities

Operating cash flow increased by \$1,396 million in 2006 to \$2,122 million. The key factors that contributed to the year over year increase are summarized in the table below.

#### Key Factors Affecting Operating Cash Flow

| (\$ millions)                         | 2006  | 2005  | 2004  | Impact on comparative operating cash flows |               | Comments on significant trends and variances  |

| <b>Total</b>                                     | <b>\$1,087</b> | <b>\$1,104</b> | <b>\$ 824</b> |   |

<sup>1</sup> Includes both construction costs and capitalized interest.

Investing activities in 2006 also included \$1.3 billion in first quarter 2006 paid for the cash component of the cost of the Placer Dome acquisition, which, net of cash acquired of \$1.1 billion, led to a net cash outflow of \$160 million. We recorded in cash flows of discontinued operations proceeds of \$1.6 billion received on closing of the sale of certain Placer Dome operations and an interest in the Pueblo Viejo project to Goldcorp in second quarter 2006 and \$1.2 billion received on closing of the sale of the South Deep mine to Gold Fields in fourth quarter 2006.

## Financing Activities

The most significant financing cash flows in 2006 were \$2.2 billion on issue of long-term debt obligations, \$1.8 billion to settle Placer Dome derivative positions and cash receipts of \$74 million received on the exercise of employee stock options partly offset by dividend payments made totaling \$191 million. We also made scheduled payments under our long-term debt obligations totaling \$1.6 billion in 2006.

## Liquidity

### Liquidity Management

Liquidity is managed dynamically, and factors that could impact liquidity are regularly monitored. The primary factors that affect liquidity include production levels, realized sales prices, cash production costs, future capital expenditure requirements, scheduled repayments of long-term debt obligations, our credit capacity and expected future debt market conditions. Working capital requirements have not historically had a material effect on liquidity. Counterparties to the financial instruments and gold sales

contracts that we hold do not have unilateral and discretionary rights to accelerate settlement of financial instruments or gold sales contracts, and we are not subject to any margin calls.

Through the combination of a strong balance sheet and positive operating cash flows, we have been able to secure financing, as required, to fund our capital projects. We had three new mines start in 2005, with our fourth and newest mine, Cowal, starting production in second quarter 2006. The costs of construction for

these projects were financed through a combination of operating cash flows and the issuance of long-term debt financing. Alternatives for sourcing our future capital needs include our significant cash position, unutilized credit facilities, future operating cash flow, project financings and public debt financings. These alternatives are evaluated to determine the optimal mix of capital resources for our capital needs. We expect that, absent a material adverse change in a combination of our sources of liquidity and/or a significant decline in gold and copper prices, present levels of liquidity will be adequate to meet our expected capital needs. If we are unable to access project financing due to unforeseen political or other problems, we expect that we will be able to access public debt markets as an alternative source of financing. Any additional indebtedness would increase our debt payment obligations, and may negatively impact our results of operations.

### Capital Resources

Adequate funding is in place or available for all our significant projects. We plan to put in place project financing for a portion of the expected construction cost of a number of our projects; however, if we are unable to do so because of unforeseen political or other challenges, we expect to be able to fund the capital required through a combination of existing capital resources and future operating cash flows. For 2007, we expect that any capital required will be funded from a combination of our existing cash position and operating cash flow.

In second quarter 2006, we received \$1.6 billion from the sale of operations to Goldcorp. In third quarter 2006, we increased our \$1 billion credit facility to \$1.5 billion. In early October 2006, we issued \$1 billion of copper-linked notes (the "Notes") comprised of \$400 million of 5.75% notes due 2016 and \$600 million of 6.35% notes due 2036. During the first three years of these Notes, the original \$1 billion of funding is to be repaid in the dollar equivalent of approximately 324 million pounds of copper, and is to be replaced over those three years by \$1 billion of funding in the form of conventional interest-bearing notes maturing in 2016 and 2036. The replacement of the copper-linked portion of the notes with conventional interest-bearing notes during this period occurs simultaneously such that the total amount outstanding at any time from issue date to maturity is \$1 billion. In October 2006, we used a portion of the proceeds from the Notes to repay debt, and plan to use the remaining proceeds to repay other outstanding debt and to fund our development projects.

<sup>1</sup> Capital resources include cash balances and sources of financing that have been arranged but not utilized.

<sup>2</sup> In 2006, includes a second \$50 million Peruvian bond offering, \$500 million increase in our first credit facility and the issuance of \$1 billion of copper-linked notes. In 2005, includes the first \$50 million Peruvian bond offering and \$84 million lease facility for Lagunas Norte. In 2004, includes the \$250 million Veladero project financing, \$750 million bond offering, and \$56 million lease facility for Lagunas Norte.

<sup>3</sup> Includes acquisition of equity method investments, changes in available-for-sale securities and other acquisitions, net of cash acquired.

<sup>4</sup> Represents \$1,840 million paid to settle acquired Placer Dome hedge positions, \$337 million repayment of acquired Placer Dome credit facility after which it was terminated, and \$77 million related to the redemption of Placer Dome preferred shares.

<sup>5</sup> Project capital represents capital invested in new projects to bring new mines into production. Regional capital represents ongoing capital required at existing mining operations. Sum of project and regional capital equals capital expenditures for the year.

<sup>6</sup> Represents available amounts under our first credit facility of \$1.5 billion and \$55 million available on Peruvian lease facilities.

*Credit Rating*

At February 8, 2007 from major rating agencies:

---

|                             |      |
|-----------------------------|------|
| Standard and Poor's ("S&P") | A-   |
| Moody's                     | Baa1 |
| DBRS                        | A    |

---

In 2006, following the acquisition of Placer Dome, our ratings were reviewed and confirmed by Moody's and DBRS. S&P lowered our rating from 'A' to 'A-', reflecting Placer Dome's lower rating. Our ability to access

unsecured debt markets and the related cost of debt financing is, in part, dependent upon maintaining an acceptable credit rating. A deterioration in our credit rating would not adversely affect existing debt securities or the terms of gold sales contracts, but could impact funding costs for any new debt financing. The key factors that are important to our credit rating include the following: our market capitalization; the strength of our balance sheet, including the amount of net debt and our debt-to-equity ratio; our net cash flow, including cash generated by operating activities and expected capital expenditure requirements; the quantity of our gold reserves; and our geo-political risk profile.

## Financial Position

### Key Balance Sheet Ratios

| As at December 31                                   | 2006     | 2005   |
|---|----------|--------|
| Non-cash working capital (\$ millions) <sup>1</sup> | \$ 764   | \$ 231 |
| Net debt (\$ millions) <sup>2</sup>                 | \$ 1,064 | \$ 764 |
| Net debt to equity ratio <sup>3</sup>               | 0.07:1   | 0.20:1 |
| Current ratio <sup>4</sup>                          | 4.85:1   | 3.64:1 |

<sup>1</sup> Represents current assets, excluding cash and equivalents, less current liabilities, excluding short-term debt obligations.

<sup>2</sup> Represents long-term and short-term debt less cash and equivalents.

<sup>3</sup> Represents net debt divided by total shareholders' equity.

<sup>4</sup> Represents current assets divided by current liabilities, excluding short term debt obligations.

Non-cash working capital increased in 2006 mainly due to increases in inventory levels as a result of the acquisition of Placer Dome. Although operating cash flow exceeded capital expenditures in 2006, net debt increased primarily as a result of settlement of acquired Placer Dome hedge positions. Higher cash balances partly offset by higher short-term debt, caused our current ratio to increase at the end of 2006.

### Shareholders' Equity

#### Outstanding Share Data

| As at February 7, 2007           | Shares<br>outstanding | Conversion for<br>Barrick<br>common shares |
|----------------------------------|-----------------------|--|
| Common shares                    | 863,957,797           |  |
| Special voting shares            | 1                     |  |
| Exchangeable shares <sup>1</sup> | 1,366,015             | 723,989                                    |
| Stock options                    | 18,406,815            |  |

<sup>1</sup> Represents Barrick Gold Inc. ("BGI") exchangeable shares. Each BGI share is exchangeable for 0.53 Barrick common shares.

For further information regarding the outstanding shares and stock options, please refer to the Financial Statements and our 2006 Management Information Circular and Proxy Statement.

#### Dividend Policy

In each of the last five years, we paid a total cash dividend of \$0.22 per common share — \$0.11 in mid-June and \$0.11 in mid-December. The amount and timing of any dividends is within the discretion of our Board of Directors. The Board of Directors reviews the dividend policy semi-annually based on the cash requirements of our operating assets, exploration and development activities, as well as potential acquisitions, combined with our current and projected financial position.

#### Comprehensive Income

Comprehensive income consists of net income or loss, together with certain other economic gains and losses that collectively are described as "other comprehensive income" or "OCI", and excluded from the income statement.

In 2006, other comprehensive income of \$150 million mainly included gains of \$17 million on hedge contracts designated for future periods, caused primarily by changes in currency exchange rates, copper prices, gold prices and fuel prices; reclassification adjustments totaling \$77 million for losses on hedge contracts designated for 2006 that were transferred to earnings in 2006; and a \$43 million unrealized increase in the fair value of investments.

Included in other comprehensive income at December 31, 2006 were unrealized pre-tax gains on currency hedge contracts totaling \$283 million, based on December 31, 2006 market foreign exchange rates. The related hedge contracts are designated against operating costs and capital expenditures primarily over the next three years, and are expected to help protect against the impact of strengthening of the Australian and Canadian dollar against the US dollar. The hedge gains are expected to be recorded in earnings at the same time as the corresponding hedged operating costs and amortization of capital expenditures are also recorded in earnings.

## Contractual Obligations and Commitments

### (1) Long-term Debt and Interest

Our debt obligations do not include any subjective acceleration clauses or other clauses that enable the holder of the debt to call for early repayment, except in the event that we breach any of the terms and conditions of the debt or for other customary events of default. The Bulyanhulu and Veladero financings are collateralized by assets at the Bulyanhulu and Veladero mines, respectively. Other than this security, we are not required to post any collateral under any debt obligations. The terms of our debt obligations would not be affected by deterioration in our credit rating. Projected interest payments on variable rate debt were based on interest rates in effect at December 31, 2006. Interest is calculated on our long-term debt obligations using both fixed and variable rates.

### (2) Asset Retirement Obligations

Amounts presented in the table represent the undiscounted future payments for the expected cost of asset retirement obligations.

### (3) Derivative Liabilities

Amounts presented in the table relate to hedge contracts disclosed under note 18 and 19 to the Financial Statements. Payments related to derivative contracts cannot be reasonably estimated given variable market conditions.

### (4) Royalties

Virtually all of the royalty arrangements give rise to obligations as we produce gold. In the event that we do not produce gold at our mining properties, we have no payment obligation to the royalty holders. The amounts disclosed are based on expected future gold production, using a spot gold price assumption of \$625 per ounce. The most significant royalty agreements are disclosed in note 6 to our Financial Statements. Based on 2006 production levels, an increase in market gold prices by \$50 per ounce would result in an annual increase in royalty payments of approximately \$18 million.

### (5) Purchase Obligations for Supplies and Consumables

Purchase obligations for supplies and consumables primarily include commitments of approximately \$180 million related to community development costs to be incurred at the Pascua-Lama project in Chile and Argentina.

### (6) Capital Commitments

Purchase obligations for capital expenditures include only those items where binding commitments have been entered into. Commitments at the end of 2006 mainly related to construction capital at our projects.

### Capital Expenditures Not Yet Committed

We expect to incur capital expenditures during the next five years for both projects and producing mines. The projects are at various development stages, from primarily exploration or scoping studies through to construction execution. The ultimate decision to incur capital at each potential site is subject to positive results which allow the project to advance past decision hurdles. Primary and significant projects in Barrick's portfolio at December 31, 2006 include Ruby Hill, Cortez Hills, Buzwagi, Pascua-Lama, Pueblo Viejo, and Donlin Creek (refer to pages 23 to 31 for further details).

### Payments to Maintain Land Tenure and Mineral Property Rights

In the normal course of business, we are required to make annual payments to maintain title or rights to mine gold at certain of our properties. If we choose to abandon a property or discontinue mining operations, the payments relating to that property can be

suspended, resulting in our rights to the property lapsing. The validity of mining claims can be uncertain and may be contested. Although we have attempted to acquire satisfactory title to our properties, some risk exists that some titles, particularly title to undeveloped properties, may be defective.

#### *Contingencies — Litigation*

We are currently subject to various litigation as disclosed in note 27 to the Financial Statements, and we may be involved in disputes with other parties in the future that may result in litigation. If we are unable to resolve these disputes favorably, it may have a material adverse impact on our financial condition, cash flow and results of operations.

#### **Financial Instruments**

We use a mixture of cash and long-term debt to maintain an efficient capital structure and ensure adequate liquidity exists to meet the cash needs of our business. A discussion of our liquidity and capital structure can be found on page 40. We use interest rate contracts to mitigate interest rate risk that is implicit in our cash balances and outstanding long-term debt. In the normal course of business, we are inherently exposed to currency and commodity price risk. We use currency and commodity hedging instruments to mitigate these inherent business risks. We also hold certain derivative instruments that do not qualify for hedge accounting treatment. These non-hedge derivatives are described in note 19 to our Financial Statements. For a discussion of certain risks and assumptions that relate to the use of derivatives, including market risk, market liquidity risk and credit risk, refer to notes 2 and 19 to our Financial Statements. For a discussion of the methods used to value financial instruments, as well as any significant assumptions, refer to note 19 to our Financial Statements.

## Summary of Financial Instruments <sup>1</sup>

As at and for the year ended December 31, 2006

| Financial Instrument                             | Principal/Notional Amount                               | Associated Risks   | Amounts Recorded in Earnings   | Amounts Not Recorded in Earnings                       |

<sup>1</sup> Refer to pages 45 to 48 for information on gold and silver sales contracts.

### *Placer Dome Gold Hedge Position*

At acquisition, Placer Dome had a net obligation to deliver approximately 7.7 million ounces of gold as well as various other derivative positions. The aggregate fair value of these derivative positions was recorded as a liability of \$1,707 million on January 20, 2006. This Placer Dome gold hedge position has been reduced to zero (on a net economic basis) at December 31, 2006. The elimination of these hedges was done via a combination of financial closeouts and offsetting positions with 4.7 million ounces eliminated in first quarter 2006 and 3 million ounces eliminated in second quarter 2006. The total cash required to settle these Placer Dome gold hedge positions was approximately \$1.8 billion, with approximately \$160 million to be incurred in future periods for positions which have been economically offset but not yet settled.

The acquired Placer Dome positions received hedge accounting treatment from the date of the acquisition until they were eliminated and, therefore, had a designated date and price against specific future gold sales. Due to the impact of hedge accounting for these contracts, revenue recorded in 2006 was based on selling prices that approximated spot gold prices less a fixed reduction of \$165 million. At December 31, 2006, Barrick's remaining fixed-price gold sales contracts stood at 1.3 million ounces of Corporate Gold Sales Contracts, and a further 9.5 million ounces of Project Gold Sales Contracts. Subsequent to December 31, 2006, we reduced the fixed price Corporate Gold Sales Contract book to zero (see pages 45 to 48).

**OFF BALANCE SHEET ARRANGEMENTS**

We have historically used gold and silver sales contracts as a means of selling a portion of our annual gold and

silver production. The contracting parties are bullion banks whose business includes entering into contracts to purchase gold or silver from mining companies. Since 2001, we have been focusing on reducing the level of outstanding gold and silver sales contracts. The terms of our fixed-price gold and silver sales contracts enable us to deliver gold and silver whenever we choose over the primarily ten-year term of the contracts.

On acquisition of Placer Dome, we acquired its preexisting gold hedge position totaling 7.7 million ounces of committed gold obligations, which was recorded on our balance sheet at an estimated fair value based on market gold price of \$567 per ounce on the date of acquisition. Acquired gold forward sales contracts were designated as cash flow hedges of future gold production. Changes in the fair value of these cash flow hedges were recorded each period on the balance sheet and in OCI to the extent they met ongoing accounting hedge effectiveness assessments until the hedges were economically closed out. In future periods, the hedge gain or loss that occurs between the date of acquisition and the hedge designation date will be recorded as a component of revenue on the hedge designation date. Revenue reported in each period will represent the cash proceeds for either spot sales or under pre-existing Barrick normal sales contracts plus or minus a hedge gain or loss resulting from the cash flow hedges. The other acquired Placer Dome derivative instruments were all classified as non-hedge derivatives from the date of acquisition. The cash settlements of liabilities under the acquired Placer Dome derivatives positions are classified as financing activities in the cash flow statement.

### Project Gold Sales Contracts

In anticipation of building our projects, and in support of any related financing, we have 9.5 million ounces of existing fixed-price gold sales contracts specifically allocated to these projects. The allocation of these contracts will help reduce gold price risk at the projects, and are expected to help secure financing for construction. We expect that the allocation of these contracts will eliminate any requirement by lenders to add any incremental gold sales contracts in the future to support any financing requirements. The forward sales prices on our Project Gold Sales Contracts have not been fully fixed, and thus remain sensitive to long-term interest rates. For these contracts, increasing long-term interest rates in the fourth quarter resulted in a higher expected realizable sales price for these contracts. If long-term interest rates continue to rise, we anticipate the expected realizable sales price to increase.

As part of our Master Trading Agreements (“MTAs”), Project Gold Sales Contracts are not subject to any provisions regarding any financial go-ahead decisions with construction, or any possible delay or change in the project.

### Key Aspects of Project Gold Sales Contracts

(as of December 31, 2006)

|  |   |
|--|---|
| Expected delivery dates. <sup>1</sup>              | 2010-2019, the approximate terms of the expected financing. |
| Future estimated average realizable selling price. | \$391/oz. <sup>2</sup>                                      |
| Mark-to-market value at December 31, 2006.         | (\$3,187) million. <sup>3</sup>                             |

<sup>1</sup> The contract termination dates are in 2016 in most cases, but we currently expect to deliver production against these contracts starting in 2010, subject to the timing of receipt of approvals of the environmental impact assessments, as well as the resolution of other external issues, both of which are largely beyond our control.

<sup>2</sup> Upon delivery of production from 2010-2019, the term of expected financing. Approximate estimated value based on current market US dollar interest rates and on an average lease rate assumption of 0.75%.

<sup>3</sup> At a spot gold price of \$632 per ounce and market interest rates.

The allocation of gold sales contracts to projects involves: i) the identification of contracts in quantities and for terms that mitigate gold price risk for the project during the term of the expected financing (contracts were chosen where the existing termination dates are spread between the targeted first year of production and the expected retirement of financing for the project); and ii) the eventual settlement of proceeds from these contracts for the benefit of production.

Through allocation of these gold sales contracts to these projects, we reduce capital risk. It protects the gold price during the term of the forecasted financing, while leaving the remaining reserves fully levered to spot gold prices.

Under the Project Gold Sales Contracts, we have an obligation to deliver gold by the termination date (currently 2016 in most cases). However, because we typically fix the price of gold under our gold sales contracts to a date that is earlier than the termination date of the contract (referred to as the “interim price-setting date”), the actual realized price on the contract termination date depends upon the actual gold market forward premium (“contango”) between the interim price-setting date and the termination date. Therefore, the \$391/oz price estimate could change over time due to a number of factors, including, but not limited to: US dollar interest rates, gold lease rates, spot gold prices, and extensions of the termination date. This price, which is an average for the total Project Gold Sales Contract position, is not necessarily representative of the prices that may be realized for actual deliveries into gold sales

contracts, in particular, if we choose to settle any gold sales contract in advance of the termination date (which we have the right to do at our discretion). If we choose to accelerate gold deliveries, this would likely lead to reduced contango that would otherwise have built up over time (and therefore a lower realized price).

The gold market forward premium, or contango, is typically closely correlated with the difference between US dollar interest rates and gold lease rates. An increase or decrease in US dollar interest rates would generally lead to a corresponding increase or decrease in contango, and therefore an increase or decrease in the estimated future price of the contract at the termination date. Furthermore, the greater the time period between the interim price-setting date and the termination date, the greater the sensitivity of the final realized price to US dollar interest rates.

A short-term spike in gold lease rates would not have a material negative impact on us because we are not significantly exposed under our fixed-price gold sales contracts to short-term gold lease rate variations. A prolonged rise in gold lease rates could result in lower contango (or negative contango, i.e. “backwardation”). Gold lease rates have historically tended to be low, and any spikes short-lived, because of the large amount of gold available for lending relative to demand.

### Corporate Gold Sales Contracts and Floating Spot-Price Gold Sales Contracts

In 2006, we reduced our fixed-price Corporate Gold Sales Contracts through the delivery of 1.2 million ounces of production into contracts and converting the pricing of 0.5 million ounces into future spot pricing. We also reallocated 3.0 million ounces of hedges to the Project Gold Sales Contracts.

As of February 21, 2007, we fully eliminated the remaining fixed-price Corporate Gold Sales Contracts. We expect to eliminate the entire Floating Spot-Price Gold Sales Contracts position through deliveries of gold production before the end of the second quarter of 2007. This is expected to result in a reduction to our pre-tax income and cash flow of \$572 million in first quarter 2007, and a reduction of \$76 million in second quarter 2007.

### Fixed-Price Silver Sales Contracts

(as of December 31, 2006)

|   |                              |
|---|------------------------------|
| Millions of silver ounces   | 13                           |
| Current termination date of silver sales contracts                  | 2016 in most cases.          |
| Average estimated realizable selling price at 2016 termination date | \$8.42/oz. <sup>1</sup>      |
| Mark-to-market value at December 31,2006                            | (\$82) million. <sup>2</sup> |

<sup>1</sup> Approximate estimated value based on current market contango of 2.50%. Accelerating silver deliveries could potentially lead to reduced contango that would otherwise have built up over time. Barrick may choose to settle any silver sales contract in advance of this termination date at any time, at its discretion. Historically, delivery has occurred in advance of the contractual termination date.

<sup>2</sup> At a spot silver price of \$12.90 per ounce.

We also have floating spot-price silver sales contracts under which we are committed to deliver 7 million ounces of silver over the next ten years at spot prices, less an average fixed-price adjustment of \$2.53 per ounce. These floating spot-price contracts were previously fixed-price contracts, for which, under the price-setting mechanisms of the MTAs, we elected to receive a price based on the market silver spot price at the time of delivery, adjusted by the difference between the spot price and the contract price at the time of such election.

### Key Terms of Gold and Silver Sales Contracts

In all of our MTAs, which govern the terms of gold and silver sales contracts with our 18 counterparties, the following applies:

- The counterparties do not have unilateral and discretionary “right to break” provisions.
- There are no credit downgrade provisions.
- We are not subject to any margin calls — regardless of the price of gold or silver.
- We have the right to settle our gold and silver sales contracts on two days notice at any time during the life of the contracts, or keep these forward gold and silver sales contracts outstanding for up to 15 years.
- At our option, we can sell gold or silver at the market price or the contract price, whichever is higher, up to the termination date of the contracts (currently 2016 in most cases).

The MTAs with our counterparties do provide for early close out of certain transactions in the event of a material adverse change in our ability or our principal hedging subsidiary’s ability to perform our or its gold and silver delivery and other obligations under the MTAs and related parent guarantees or a lack of gold or silver market, and for customary events of default such as

covenant breaches, insolvency or bankruptcy. The principal financial covenants are:

- We must maintain a minimum consolidated net worth of at least \$2 billion; it was \$8.3 billion at year end. The MTAs exclude unrealized mark-to-market valuations in the calculation of consolidated net worth.
- We must maintain a maximum long-term debt to consolidated net worth ratio of 2:1; it was 0.5:1 at year end.

In most cases, under the terms of the MTAs, the period over which we are required to deliver gold is extended annually by one year, or kept "evergreen", regardless of the intended delivery dates, unless otherwise notified by the counterparty. This means that, with each year that passes, the termination date of most MTAs is extended into the future by one year.

As spot gold prices increase or decrease, the value of our gold mineral reserves and amount of potential operating cash inflows generally increases or decreases. The unrealized mark-to-market loss on our fixed-price gold sales contracts also increases or decreases. The mark-to-market value represents the cancellation value of these contracts based on current market levels, and does not represent an immediate economic obligation for payment by us. Our obligations under the gold forward sales contracts are to deliver an agreed upon quantity of gold at a contracted price by the termination date of the contracts (currently 2016 in most cases). Gold sales contracts are not recorded on our balance sheet. The economic impact of these contracts is reflected in our Financial Statements within gold sales based on selling prices under the contracts at the time we record revenue from the physical delivery of gold and silver under the contracts.

### Fair Value of Derivative Positions

| As at December 31, 2006<br>(\$ millions)                       | Unrealized<br>Gain/(Loss) |
|--|---------------------------|
| Corporate Gold Sales Contracts                                 | \$ (387)                  |
| Project Gold Sales Contracts                                   | (3,187)                   |
| Floating Spot-Price Gold Sales Contracts                       | (260)                     |
| Silver Sales Contracts   | (82)                      |
| Floating Spot-Price Silver Sales Contracts                     | (18)                      |
| Foreign currency contracts                                     | 176                       |
| Interest rate and gold lease contracts                         | 49                        |
| Fuel contracts   | 29                        |
| Gold positions offset but not financially settled <sup>1</sup> | (160)                     |
| Copper contracts   | 81                        |
| <b>Total</b>   | <b>\$(3,759)</b>          |

<sup>1</sup> These are acquired Placer Dome contracts which have been economically offset, but not yet settled. Upon settlement, there will be a cash impact of approximately negative \$160 million, but no material impact on earnings as the contract values were captured as part of fair value of assets and liabilities recorded upon acquisition of Placer Dome.

### CRITICAL ACCOUNTING POLICIES AND ESTIMATES

Management has discussed the development and selection of our critical accounting estimates with the Audit Committee of the Board of Directors, and the Audit Committee has reviewed the disclosure relating to such estimates in conjunction with its review of this MD&A. The accounting policies and methods we utilize determine how we report our financial condition and results of operations, and they may require management to make estimates or rely on assumptions about matters that are inherently uncertain.

Our financial condition and results of operations are reported using accounting policies and methods prescribed by US GAAP. In certain cases, US GAAP allows accounting policies and methods to be selected from two or more alternatives, any of which might be reasonable yet result in our reporting materially different amounts. We exercise judgment in selecting and applying our accounting policies and methods to ensure that, while US GAAP compliant, they reflect our judgment of an appropriate manner in which to record and report our financial condition and results of operations.

### Accounting Policy Changes in 2006

This section includes a discussion of accounting changes that were adopted in our 2006 Financial Statements. On January 1, 2006, we adopted FASB Interpretation No. 47, Accounting for Conditional Asset Retirement Obligations ("FIN 47"). The adoption of FIN 47 did not have a material effect on our Financial Statements, and therefore a detailed discussion of this accounting change has not been included.

#### *FAS 123R, Share-Based Payment ("FAS 123R")*

On January 1, 2006, we adopted FAS 123R, which includes in its scope our stock options, Restricted Share Units ("RSUs") and Deferred Share Units ("DSUs"). Prior to January 1, 2006, we accounted for stock options granted to employees using an intrinsic value method. We recorded compensation cost for stock options based on the excess of the market price of the stock option at the grant date of an award over the exercise price. Historically, the exercise price for stock options equaled the market price of stock at the grant date, resulting in no compensation cost. FAS 123R requires us to expense the fair value of share based payment awards over the vesting term. We adopted FAS 123R using the modified prospective method and our Financial

Statements for periods prior to adoption, including the 2005 comparative Financial Statements, have not been

restated. Total stock option expense recorded in 2006 was \$27 million. Historically, we have recorded compensation expense for RSUs and DSUs based on their fair values, and the adoption of FAS 123R had no significant impact on accounting for RSUs and DSUs.

In September 2006, the SEC released a letter on accounting for stock options. The letter addresses the determination of the grant date and measurement date for stock option awards. For Barrick, the stock option grant date is the date when the details of the award, including the number of options granted by individual and the exercise price, are approved. The application of the principles in the letter issued by the SEC did not change the date that has been historically determined as the measurement date for stock option grants.

For stock option grants issued after September 30, 2005 we used the Lattice valuation model to determine fair value. The most significant assumptions involving judgment that affect a stock option's value under the Lattice model include, but are not limited to: expected volatility, expected term and expected exercise behavior of option holders.

In first quarter 2006, we assumed the outstanding fully-vested Placer Dome stock options. These stock options are exercisable into an equivalent number of Barrick shares based on the exchange ratio under the acquisition of Placer Dome. The estimated fair value of these stock options of \$22 million was recorded as part of the cost of acquisition.

#### *FAS 151, Inventory Costs ("FAS 151")*

On January 1, 2006, we adopted FAS 151. Under FAS 151, abnormal amounts of idle facility expense, freight, handling costs and wasted materials are recognized as current period charges rather than capitalized to inventory. FAS 151 also requires that the allocation of fixed production overhead to the cost of inventory be based on the normal capacity of production facilities. FAS 151 is applicable prospectively from January 1, 2006 and we have modified our inventory accounting policy consistent with its requirements. Under our modified accounting policy for inventory, production-type costs that are abnormal are excluded from inventory and charged directly to cost of sales. Interruptions to normal activity levels at a mine could occur for a variety of reasons, including equipment failures and major maintenance activities, strikes, power supply interruptions and adverse weather conditions. When such interruptions occur we evaluate the impact on the cost of inventory produced in the period and, to the extent the actual cost exceeds the cost based on normal capacity, we expense any excess directly to cost of sales.

The adoption of FAS 151 did not have a significant impact on our Financial Statements in 2006.

*FAS 158, Employers' Accounting for Defined Benefit Pension and Other Postretirement Plans ("FAS 158")* In September 2006, the FASB issued FAS 158 that will require employers to fully recognize the obligations associated with single-employer defined benefit pension, retiree healthcare and other postretirement plans in their financial statements.

FAS 158 requires an employer to:

- a) Recognize in its balance sheet an asset for a plan's overfunded status or a liability for the plan's underfunded status.
- b) Recognize as a component of other comprehensive income, the existing unrecognized net gains or losses, unrecognized prior service costs or credits and unrecognized net transition assets or obligations.
- c) Measure defined benefit plan assets and obligations as of the date of the employer's fiscal year-end balance sheet (with limited exceptions).

The requirement to recognize the funded status of a benefit plan and the related disclosure requirements noted in a) and b) above are effective as of the end of the fiscal year ending after December 15, 2006. We have adopted these provisions effective December 31, 2006. The requirement to measure the plan assets and benefit obligations as of the date of the employer's fiscal year-end mentioned in c) above is effective for fiscal years ending after December 15, 2008. The incremental effect of adopting FAS 158 is disclosed in note 26 to the Financial Statements.

#### *Staff Accounting Bulletin No. 108 — Considering the effects of Prior Year Misstatements when Quantifying Misstatements in Current Year Financial Statements ("SAB 108")*

In September 2006, the SEC issued SAB 108. SAB 108 addresses the multiple methods used to quantify financial statement misstatements and evaluate the accumulation of misstatements. SAB 108 requires registrants to evaluate prior period misstatements using both a balance sheet approach ("iron curtain method") and an income statement approach ("rollover method"). SAB 108 is effective for interim and annual periods ending after November 15, 2006. SAB 108 allows a onetime transitional cumulative effect adjustment to retained earnings as of January 1, 2006 for errors that were previously deemed not material, but would be material under the requirements of SAB 108. We have historically used the rollover method in quantifying potential financial statement misstatements. As required by SAB 108, we re-evaluated prior period

immaterial misstatements using the iron curtain method. Based upon the result of our evaluation, we did not identify any material errors or misstatements that were previously deemed not material under the rollover approach. Going forward, we will apply both methods in quantifying potential financial statement errors and misstatements, as required by SAB 108.

### **Future Accounting Policy Changes**

This section includes a discussion of future accounting changes that may have a significant impact on our Financial Statements.

#### *FASB Interpretation No. 48, Accounting for Uncertainty in Income Taxes-an interpretation of FASB Statement No. 109 ("FIN48")*

In June 2006, the FASB issued FIN 48. The interpretation has been developed because of diversity in practice for accounting for uncertain tax positions. Some entities record tax benefits for uncertain tax positions as they are filed on the income tax return, while others use either gain contingency accounting or a probability threshold.

Under the interpretation, an entity should presume that a taxing authority will examine all tax positions with full knowledge of all relevant information. Therefore, when evaluating a tax position for recognition and measurement, consideration of the risk of examination is not appropriate. In applying the provisions of the interpretation, there will be distinct recognition and measurement evaluations. The first step is to evaluate the tax position for recognition by determining if the weight of available evidence indicates it is more likely than not, based solely on the technical merits, that the position will be sustained on audit, including resolution of related appeals or litigation processes, if any. The second step is to measure the appropriate amount of the benefit to recognize. The amount of benefit to recognize will be measured as the maximum amount which is more likely than not to be realized. The tax position should be derecognized in the first period when it is no longer more likely than not of being sustained. On subsequent recognition and measurement, the maximum amount which is more likely than not to be recognized at each reporting date will represent management's best estimate given the information available at the reporting date, even though the outcome of the tax position is not absolute or final. Subsequent recognition, derecognition, and measurement should be based on new information. A liability for interest or penalties or both will be recognized as deemed to be incurred based on the provisions of the tax law, that is, the period for which the taxing authority will begin assessing the interest or penalties or both. The amount of interest expense recognized will be based on the difference between the amount recognized in accordance with this interpretation and the benefit recognized in the tax return. Under this interpretation, an entity will disclose its policy on the classification of interest and penalties and also disclose the reconciliation of the total amounts of unrecognized tax benefits at the beginning to the end of each period. On transition, the change in net assets due to applying the provisions of the final interpretation will be considered a change in accounting principle with the cumulative effect of the change treated as an offsetting adjustment to the opening balance of retained earnings in the period of transition. The interpretation is effective by the beginning of the first annual period beginning after December 15, 2006. We are presently evaluating the impact of this interpretation on our financial statements.

#### *FAS 157 Fair Value Measurements ("FAS 157")*

In September 2006, the FASB issued FAS 157 which provides enhanced guidance for using fair value to measure assets and liabilities. FAS 157 is meant to remedy the diversity and inconsistency within generally accepted accounting principles in measuring fair value. FAS 157 applies whenever other standards require (or permit) assets or liabilities to be measured at fair value. FAS 157 does not expand the use of fair value in any new circumstances.

FAS 157 expands disclosure about the use of fair value to measure assets and liabilities in interim and annual periods subsequent to initial recognition. The disclosures focus on the inputs used to measure fair value and for recurring fair value measurements using significant unobservable inputs, the effect of measurement on earnings (or changes in net assets) for the period must be disclosed. FAS 157 is effective for financial statements issued for fiscal years beginning after November 15, 2007, and interim periods within those fiscal years. Early adoption is permitted. We are currently assessing the impact on our financial statements.

#### *FSP No. AUG AIR-1-Accounting for Planned Major Maintenance Activities ("FSPAIR-1")*

In September 2006, the FASB issued FSP AIR-1 which amends guidance from the AICPA Industry Audit Guide, Audits of Airlines with respect to planned major maintenance activities and makes this guidance applicable to entities in all industries. Of the three methods of accounting for planned major maintenance allowed by FSP AIR-1, we have chosen the built-in overhaul method. The built-in overhaul method is based on segregation of plant and equipment costs into those that should be depreciated over the useful life of the

asset and those that require overhaul at periodic intervals. Thus, the estimated cost of the overhaul component included in the purchase price is set up separately from the cost of the asset and is amortized to the date of the initial overhaul. The cost of the initial overhaul is then capitalized and amortized to the next overhaul, at which time the process is repeated.

FSP AIR-1 is effective for the first fiscal year beginning after December 15, 2006. The provisions shall also be applied retrospectively for all financial statements presented unless it is impractical to do so. The provisions of FSP AIR-1 will be applied beginning January 1, 2007. We are in the process of determining the effect, if any, that adoption of this FSP will have on prior periods.

### Critical Accounting Estimates and Judgments

Certain accounting estimates have been identified as being “critical” to the presentation of our financial condition and results of operations because they require us to make subjective and/or complex judgments about matters that are inherently uncertain; or there is a reasonable likelihood that materially different amounts could be reported under different conditions or using different assumptions and estimates.

#### *Reserve Estimates Used to Measure Amortization of Property, Plant and Equipment*

We record amortization expense based on the estimated useful economic lives of long-lived assets. Changes in reserve estimates are generally calculated at the end of each year and cause amortization expense to increase or decrease prospectively. The estimate that most significantly affects the measurement of amortization is quantities of proven and probable gold and copper reserves, because we amortize a large portion of property, plant and equipment using the units-of-production method. The estimation of quantities of gold and copper reserves, in accordance with the principles in Industry Guide No. 7, issued by the US Securities and Exchange Commission (“SEC”) is complex, requiring significant subjective assumptions that arise from the evaluation of geological, geophysical, engineering and economic data for a given ore body. This data could change over time as a result of numerous factors, including new information gained from development activities, evolving production history and a reassessment of the viability of production under different economic conditions. Changes in data and/or assumptions could cause reserve estimates to substantially change from period to period. Actual gold and copper production could differ from expected gold and copper production based on reserves, and an adverse change in gold or copper prices could make a reserve uneconomic to mine. Variations could also occur in actual ore grades and gold, silver and copper recovery rates from estimates.

A key trend that could reasonably impact reserve estimates is rising market mineral prices, because the mineral price assumption is closely related to the trailing three-year average market price. As this assumption rises, this could result in an upward revision to reserve estimates as material not previously classified as a reserve becomes economic at higher gold prices. Following the recent trend in market gold prices over the last three years, the mineral price assumption used to measure reserves has also been rising. The gold price assumption was \$475 per ounce in 2006 (2005: \$400 per ounce; 2004: \$375 per ounce). The copper price assumption was \$1.50 (\$1.75 at Osborne) per pound in 2006.

The impact of a change in reserve estimates is generally more significant for mines near the end of the mine life because the overall impact on amortization is spread over a shorter time period. Also, amortization expense is more significantly impacted by changes in reserve estimates at underground mines than open-pit mines due to the following factors:

- Underground development costs incurred to access ore at underground mines are significant and amortized using the units-of-production method; and
- Reserves at underground mines are often more sensitive to mineral price assumptions and changes in production costs. Production costs at underground mines are impacted by factors such as dilution, which can significantly impact mining and processing costs per ounce.

### Impact of Historic Changes in Reserve Estimates on Amortization

For the years ended Dec. 31  
(\$ millions, except  
reserves in millions of  
contained oz)

|                   | 2006  |  | 2005  |  |
|-------------------|---|--|---|--|
|                   | Reserves<br>increase<br>(decrease) <sup>1</sup> | Amortization<br>increase<br>(decrease) | Reserves<br>increase<br>(decrease) <sup>1</sup> | Amortization<br>increase<br>(decrease) |
| North America     | 1.7   | (6)                                    | 2.4   | \$ (3)                                 |
| South America     | 0.1   | (35)                                   | 0.3   | (22)                                   |
| Australia Pacific | 0.6   | (16)                                   | 0.2   | (3)                                    |

| <b>Total</b>      | <b>5.4</b>                                      | <b>(75)</b>                            | <b>3.0</b>                                      | <b>(28)</b>                            |

<sup>1</sup> Each year we update our reserve estimates as at the end of the year as part of our normal business cycle. Reserve changes presented were calculated at the beginning of the applicable fiscal year and are in millions of contained ounces.

#### *Impairment Assessments of Investments*

Each reporting period we review all available-for-sale securities whose fair value at the end of period is below cost to determine whether an other-than-temporary

impairment has occurred. We consider all relevant facts or circumstances in this assessment, particularly: the length of time and extent to which fair value has been less than the carrying amount; the financial condition and near term prospects of the investee, including any specific events that have impacted its fair value; both positive and negative evidence that the carrying amount is recoverable within a reasonable period of time; and our ability and intent to hold the investment for a reasonable period of time sufficient for an expected recovery of the fair value up to or beyond the carrying amount. Changes in the values of these investments are caused by market factors beyond our control and could be significant, and the amount of any impairment charges could materially impact earnings. In 2006, we reviewed two investments that were impaired, and after concluding that the impairments were other-than-temporary, we recorded a pre-tax impairment charge of \$6 million (2005: \$16 million; 2004: \$5 million).

#### *Impairment Assessments of Operating Mines, Development Projects and Exploration Stage Properties*

We review and test the carrying amounts of assets when events or changes in circumstances suggest that the carrying amount may not be recoverable. We group assets at the lowest level for which identifiable cash flows are largely independent of the cash flows of other assets and liabilities. We review each mine and development project for recoverability by comparing the total carrying value of the assets of that mine or project to the expected future cash flows associated with that mine or project. If there are indications that an impairment may have occurred, we prepare estimates of expected future cash flows for each group of assets. Expected future cash flows are based on a probability-weighted approach applied to potential outcomes.

Estimates of expected future cash flow reflect:

- Estimated sales proceeds from the production and sale of recoverable ounces of gold or pounds of copper contained in proven and probable reserves;
- Expected future commodity prices and currency exchange rates (considering historical and current prices, price trends and related factors);
- Expected future operating costs and capital expenditures to produce proven and probable gold or copper reserves based on mine plans that assume current plant capacity, but exclude the impact of inflation;
- Expected cash flows associated with value beyond proven and probable reserves, which includes the expected cash outflows required to develop and extract the value beyond proven and probable reserves; and
- Environmental remediation costs excluded from the measurement of asset retirement obligations.

We record a reduction of a group of assets to fair value as a charge to earnings if the discounted expected future cash flows are less than the carrying amount. We generally estimate fair value by discounting the expected future cash flows using a discount factor that reflects the risk-free rate of interest for a term consistent with the period of expected cash flows.

Expected future cash flows are inherently uncertain and could materially change over time. They are significantly affected by reserve estimates, together with economic factors such as gold, copper and silver prices, other commodity and consumables costs and currency exchange rates, estimates of costs to produce reserves and future regional capital. If a significant adverse change in the market gold price, or the market copper price, occurred that caused us to revise the price assumptions downwards, the conclusions on the impairment tests could change, subject to the effect of changes in other factors and assumptions. The assessment and measurement of impairment excludes the impact of derivatives designated in a cash flow hedge relationship for future cash flows arising from operating mines and development projects.

Because of the significant capital investment that is required at many mines, if an impairment occurs, it could materially impact earnings. Due to the long-life nature of many mines, the difference between total estimated discounted net cash flows and fair value can be substantial. Therefore, although the value of a mine may decline gradually over multiple reporting periods, the application of impairment accounting rules could lead to recognition of the full amount of the decline in value in one period. Due to the highly uncertain nature of future cash flows, the determination of when to record an impairment charge can be very subjective. We make this determination using available evidence taking into account current expectations for each mining property.

For acquired exploration-stage properties, the purchase price is capitalized, but post-acquisition exploration expenditures are expensed. The future economic viability of exploration-stage properties largely depends upon the outcome of exploration activity, which can take a number of years to complete for large properties. We monitor the results of exploration activity over time to assess whether an impairment may have occurred. The measurement of any impairment is made more difficult because there is not an active market for exploration properties, and because it is not possible to use discounted cash flow techniques due to the very limited

information that is available to accurately model future cash flows. In general, if an impairment occurs at an exploration-stage property, it would probably have minimal value and most of the acquisition cost may have to be written down. Impairment charges are recorded in other income/expense and impact earnings in the year they are recorded. Prospectively, the impairment could also impact the calculation of amortization of an asset.

In 2004, we completed impairment tests for the Cowal project, the Eskay Creek mine and various Peruvian exploration-stage properties. For Cowal, an impairment test was completed, incorporating upward revisions to estimated capital and operating costs for the project and the impact of the US dollar exchange rate on Australian dollar expenditures, measured at market prices. On completion of this test, we concluded that the project was not impaired. On completion of the impairment test for Eskay Creek, we concluded that the mine was impaired, and we recorded a pre-tax impairment charge of \$58 million. On completion of the exploration program for 2005 and updating assessments of future plans, we concluded that a group of Peruvian exploration-stage properties were impaired at the end of 2004 and we recorded a pre-tax impairment charge of \$67 million. Throughout 2006, we updated our impairment assessments for the Eskay Creek mine and Cowal project and we concluded that they were not impaired at the end of 2006. In 2006, the carrying amount of Cuerpo Sur, an extension of Pierina, was tested for impairment on completion of the annual life of mine planning process. An impairment charge of \$17 million was recorded.

#### *Impairment Assessments of Goodwill*

Goodwill represents the excess of the purchase price of an acquired business over the fair value of the identifiable assets acquired and liabilities assumed. We test for impairment of goodwill on an annual basis and at any other time if events occur or circumstances change that would indicate that it is more likely than not that the fair value of the reporting unit has been reduced below its carrying amount. Circumstances that could trigger an impairment test include: a significant adverse change in the business climate or legal factors; an adverse action or assessment by a regulator; unanticipated competition; the loss of key personnel; change in reportable segments; the likelihood that a reporting unit or significant portion of a reporting unit will be sold or otherwise disposed of; adverse results of testing for recoverability of a significant asset group within a reporting unit; and the recognition of a goodwill impairment loss in the financial statements of a subsidiary that is a component of a reporting unit. The impairment test for goodwill is a two-step process. Step one consists of a comparison of the fair value of a reporting unit with its carrying amount, including the goodwill allocated to the reporting unit. Measurement of the fair value of a reporting unit is based on one or more fair value measures including present value techniques of estimated future cash flows and estimated amounts at which the unit as a whole could be bought or sold in a current transaction between willing parties. We also consider comparable market capitalization rates for each reporting unit as of the date of the impairment test. If the carrying amount of the reporting unit exceeds the fair value, step two requires the fair value of the reporting unit to be allocated to the underlying assets and liabilities of that reporting unit, resulting in an implied fair value of goodwill. If the carrying amount of the reporting unit goodwill exceeds the implied fair value of that goodwill, an impairment loss equal to the excess is recorded in net earnings (loss).

At December 31, 2006, the carrying value of goodwill was approximately \$5.9 billion. Goodwill arose in connection with our January 2006 acquisition of Placer Dome. The determination of reporting units and allocation of goodwill to those reporting units is not yet complete. For the initial impairment test in fourth quarter 2006, we considered the impact of allocating goodwill to individual mines and to aggregations of mines within regional business units. On completion of this goodwill impairment test, we concluded that there was no impairment of goodwill in 2006.

#### *Production Start Date*

We assess each mine construction project to determine when a mine moves into production stage. The criteria used to assess the start date are determined based on the unique nature of each mine construction project, such as the complexity of a plant or its location. We consider various relevant criteria to assess when the mine is substantially complete and ready for its intended use and moved into production stage. Some of the criteria considered would include, but are not limited to, the following:

- The level of capital expenditures compared to construction cost estimates
- Completion of a reasonable period of testing of mine plant and equipment
- Ability to produce minerals in saleable form (within specifications)
- Ability to sustain ongoing production of minerals

In 2005, we determined the start date for three new mines: Tulawaka, Lagunas Norte and Veladero. In 2006, we determined the start date for Cowal. When a mine construction project moves into the production stage, the capitalization of certain mine construction costs

ceases and costs are either capitalized to inventory or expensed, except for capitalizable costs related to property, plant and equipment additions or improvements, underground mine development or reserve development.

#### *Fair Value of Asset Retirement Obligations ("AROs")*

AROs arise from the acquisition, development, construction and normal operation of mining property, plant and equipment, due to government controls and regulations that protect the environment and public safety on the closure and reclamation of mining properties. We record the fair value of an ARO in our Financial Statements when it is incurred and capitalize this amount as an increase in the carrying amount of the related asset. At operating mines, the increase in an ARO is recorded as an adjustment to the corresponding asset carrying amount and results in a prospective increase in amortization expense. At closed mines, any adjustment to an ARO is charged directly to earnings.

The fair values of AROs are measured by discounting the expected cash flows using a discount factor that reflects the credit-adjusted risk-free rate of interest. We prepare estimates of the timing and amounts of expected cash flows when an ARO is incurred, which are updated to reflect changes in facts and circumstances, or if we are required to submit updated mine closure plans to regulatory authorities. In the future, changes in regulations or laws or enforcement could adversely affect our operations; and any instances of non-compliance with laws or regulations that result in fines or injunctions or delays in projects, or any unforeseen environmental contamination at, or related to, our mining properties could result in us suffering significant costs. We mitigate these risks through environmental and health and safety programs under which we monitor compliance with laws and regulations and take steps to reduce the risk of environmental contamination occurring. We maintain insurance for some environmental risks, however, for some risks coverage cannot be purchased at a reasonable cost. Our coverage may not provide full recovery for all possible causes of loss. The principal factors that can cause expected cash flows to change are: the construction of new processing facilities; changes in the quantities of material in reserves and a corresponding change in the life of mine plan; changing ore characteristics that ultimately impact the environment; changes in water quality that impact the extent of water treatment required; and changes in laws and regulations governing the protection of the environment. In general, as the end of the mine life nears, the reliability of expected cash flows increases, but earlier in the mine life, the estimation of an ARO is inherently more subjective. Significant judgments and estimates are made when estimating the fair value of AROs. Expected cash flows relating to AROs could occur over periods up to 40 years and the assessment of the extent of environmental remediation work is highly subjective. Considering all of these factors that go into the determination of an ARO, the fair value of AROs can materially change over time.

At our operating mines, we continued to record AROs based on disturbance of the environment over time. It is reasonably possible that circumstances could arise during or by the end of the mine life that will require material revisions to AROs. In particular, the extent of water treatment can have a material effect on the fair value of AROs, and the expected water quality at the end of the mine life, which is the primary driver of the extent of water treatment, can change significantly. We periodically prepare updated studies for our mines, following which it may be necessary to adjust the fair value of AROs. The period of time over which we have assumed that water quality monitoring and treatment will be required has a significant impact on AROs at closed mines. The amount of AROs recorded reflects the expected cost, taking into account the probability of particular scenarios. The difference between the upper end of the range of these assumptions and the lower end of the range can be significant, and consequently changes in these assumptions could have a material effect on the fair value of AROs and future earnings in a period of change.

At one closed mine, the principal uncertainty that could impact the fair value of the ARO is the manner in which a tailings facility will need to be remediated. In measuring the ARO, we have concluded that there are two possible methods that could be used. We have recorded the ARO using the more costly method until such time that the less costly method can be proven as technically feasible and approved.

In 2006, we recorded increases in ARO estimates of \$73 million (2005: \$91 million; 2004: \$68 million) of which \$27 million of this increase (2005: \$47 million; 2004: \$14 million) related to new AROs at development projects and mines that commenced production during 2006. A \$7 million reduction (2005: \$29 million increase; 2004: \$32 million increase) relates to updates of the assessment of the extent of water treatment and other assumptions at our operating mines. We recorded increases in AROs of \$53 million at our closed mines, which were charged to earnings (2005: \$15 million; 2004: \$22 million).

|   |               |
|---|---------------|
| AROs at December 31, 2006 (\$ millions) |               |
| Operating mines                         | \$ 683        |
| Closed mines                            | 200           |
| Development projects                    | 10            |
| <b>Total</b>                            | <b>\$ 893</b> |

### **Deferred Tax Assets and Liabilities**

#### **Measurement of Temporary Differences**

We are periodically required to estimate the tax basis of assets and liabilities. Where applicable tax laws and regulations are either unclear or subject to varying interpretations, it is possible that changes in these estimates could occur that materially affect the amounts of deferred income tax assets and liabilities recorded in our Financial Statements. Changes in deferred tax assets and liabilities generally have a direct impact on earnings in the period of changes. The most significant such estimate is the tax basis of certain Australian assets following elections in 2004 under new tax regimes in Australia. These elections resulted in the revaluation of certain assets in Australia for income tax purposes. Part of the revalued tax basis of these assets was estimated based on a valuation completed for tax purposes. This valuation is under review by the Australian Tax Office ("ATO") and the amount finally accepted by the ATO may differ from the assumption used to measure deferred tax balances at the end of 2004.

#### **Valuation Allowances**

Each period, we evaluate the likelihood of whether some portion or all of each deferred tax asset will not be realized. This evaluation is based on historic and future expected levels of taxable income, the pattern and timing of reversals of taxable temporary timing differences that give rise to deferred tax liabilities, and tax planning initiatives. Levels of future taxable income are affected by, among other things, market gold prices, production costs, quantities of proven and probable gold and copper reserves, interest rates and foreign currency exchange rates. If we determine that it is more likely than not (a likelihood of more than 50%) that all or some portion of a deferred tax asset will not be realized, then we record a valuation allowance against the amount we do not expect to realize. Changes in valuation allowances are recorded as a component of income tax expense or recovery for each period. The most significant recent trend impacting expected levels of future taxable and valuation allowances has been rising gold and copper prices. A continuation of this trend could lead to the release of some of the valuation allowances recorded, with a corresponding effect on earnings in the period of release.

In 2006, we released \$25 million of valuation allowances in the United States due to the estimated effect of higher market gold prices on the ability to utilize deferred tax assets. We released \$9 million of valuation allowances in Chilean entity due to the availability of income. We released valuation allowances of \$19 million in Canada reflecting utilization of capital losses.

In 2005, we released valuation allowances totaling \$32 million, which mainly included amounts totaling \$31 million in Argentina, relating to the effect of the higher gold price environment and start-up of production at Veladero in 2005. We released valuation allowances totaling \$5 million in 2004 as a consequence of an election to consolidate our Australian operations into one tax group.

| Valuation allowances at December 31 (\$ millions) | 2006          | 2005          |
|---|---------------|---------------|
| United States                                     | \$ 211        | \$ 209        |
| Chile   | 110           | 124           |
| Argentina   | 46            | 46            |
| Canada  | 59            | 63            |
| Tanzania  | 217           | 204           |
| Australia   | 2             | 2             |
| Other   | 13            | 8             |
| <b>Total</b>                                      | <b>\$ 658</b> | <b>\$ 656</b> |

United States: most of the valuation allowances relate to Alternative Minimum Tax credits, which have an unlimited carry-forward period. Increasing levels of future taxable income due to higher gold selling prices and other factors and circumstances may result in our becoming a regular taxpayer under the US regime, which may cause us to release some, or all, of the valuation allowance on the Alternative Minimum Tax credits.

Chile and Argentina: the valuation allowances relate to the full amount of tax assets in subsidiaries that do not have any present sources of gold production or taxable income. In the event that these subsidiaries have sources of taxable income in the future, we may release some or all of the allowances.

Canada: substantially all of the valuation allowances relate to capital losses that will only be utilized if any capital gains are realized.

Tanzania: considering the local fiscal regime applicable to mining companies and expected levels of future taxable income from the Bulyanhulu and Tulawaka mines, a valuation allowance exists against a portion of the deferred tax assets. If we conclude that expected levels of future taxable income from Bulyanhulu and Tulawaka will be higher, we may release some or all of the valuation allowance.

## CAUTIONARY STATEMENT ON FORWARD-LOOKING INFORMATION

Certain information contained or incorporated by reference in this Year End Report 2006, including any information as to our future financial or operating performance, constitutes “forward-looking statements”. All statements, other than statements of historical fact, are forward-looking statements. The words “believe”, “expect”, “anticipate”, “contemplate”, “target”, “plan”, “intends”, “continue”, “budget”, “estimate”, “may”, “will”, “schedule” and similar expressions identify forward-looking statements. Forward-looking statements are necessarily based upon a number of estimates and assumptions that, while considered reasonable by us, are inherently subject to significant business, economic and competitive uncertainties and contingencies. Known and unknown factors could cause actual results to differ materially from those projected in the forward-looking statements. Such factors include, but are not limited to: fluctuations in the currency markets (such as Canadian and Australian dollars, South African rand, Chilean Peso and Papua New Guinean kina versus US dollar); fluctuations in the spot and forward price of gold and copper or certain other commodities (such as silver, diesel fuel and electricity); changes in US dollar interest rates or gold lease rates that could impact the mark-to-market value of outstanding derivative instruments and ongoing payments/receipts under interest rate swaps and variable rate debt obligations; risks arising from holding derivative instruments (such as credit risk, market liquidity risk and mark-to-market risk); changes in national and local government legislation, taxation, controls, regulations and political or economic developments in Canada, the United States, Dominican Republic, Australia, Papua New Guinea, Chile, Peru, Argentina, South Africa, Tanzania, Russia, Pakistan or Barbados or other countries in which we do or may carry on business in the future; business opportunities that may be presented to, or pursued by, us; our ability to successfully integrate acquisitions; operating or technical difficulties in connection with mining or development activities; employee relations; litigation; the speculative nature of exploration and development, including the risks of obtaining necessary licenses and permits; diminishing quantities or grades of reserves; adverse changes in our credit rating; and contests over title to properties, particularly title to undeveloped properties. In addition, there are risks and hazards associated with the business of exploration, development and mining, including environmental hazards, industrial accidents, unusual or unexpected formations, pressures, cave-ins, flooding and gold bullion or copper cathode losses (and the risk of inadequate insurance, or inability to obtain insurance, to cover these risks). Many of these uncertainties and contingencies can affect our actual results and could cause actual results to differ materially from those expressed or implied in any forward-looking statements made by, or on behalf of, us. Readers are cautioned that forward-looking statements are not guarantees of future performance. All of the forward-looking statements made in this Year End Report 2006 are qualified by these cautionary statements. Specific reference is made to Barrick’s most recent Form 40-F/Annual Information Form on file with the SEC and Canadian provincial securities regulatory authorities for a discussion of some of the factors underlying forward-looking statements.

We disclaim any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except to the extent required by applicable laws.

## GLOSSARY OF TECHNICAL TERMS

**AUTOCLAVE:** Oxidation process in which high temperatures and pressures are applied to convert refractory sulphide mineralization into amenable oxide ore.

**BACKFILL:** Primarily waste sand or rock used to support the roof or walls after removal of ore from a slope.

**BY-PRODUCT:** A secondary metal or mineral product recovered in the milling process such as copper and silver.

**CONCENTRATE:** A very fine, powder-like product containing the valuable ore mineral from which most of the waste mineral has been eliminated.

**CONTAINED OUNCES:** Represents ounces in the ground before reduction of ounces not able to be recovered by the applicable metallurgical process.

**CONTANGO:** The positive difference between the spot market gold price and the forward market gold price. It is often expressed as an interest rate quoted with reference to the difference between inter-bank deposit rates and gold lease rates.

**DEVELOPMENT:** Work carried out for the purpose of opening up a mineral deposit. In an underground mine this includes shaft sinking, crosscutting, drifting and raising. In an open pit mine, development includes the removal of overburden.

**DILUTION:** The effect of waste or low-grade ore which is unavoidably included in the mined ore, lowering the recovered grade.

**DORÉ:** Unrefined gold and silver bullion bars usually consisting of approximately 90 percent precious metals that will be further refined to almost pure metal.

### **DRILLING:**

*Core:* drilling with a hollow bit with a diamond cutting rim to produce a cylindrical core that is used for geological study and assays. Used in mineral exploration.

*In-fill:* any method of drilling intervals between existing holes, used to provide greater geological detail and to help establish reserve estimates.

**EXPLORATION:** Prospecting, sampling, mapping, diamond-drilling and other work involved in searching for ore.

**GRADE:** The amount of metal in each ton of ore, expressed as troy ounces per ton or grams per tonne for precious metals and as a percentage for most other metals.

*Cut-off grade:* the minimum metal grade at which an orebody can be economically mined (used in the calculation of ore reserves).

*Mill-head grade:* metal content of mined ore going into a mill for processing.

*Recovered grade:* actual metal content of ore determined after processing.

*Reserve grade:* estimated metal content of an orebody, based on reserve calculations.

**HEAP LEACHING:** A process whereby gold is extracted by “heaping” broken ore on sloping impermeable pads and continually applying to the heaps a weak cyanide solution which dissolves the contained gold. The gold-laden solution is then collected for gold recovery.

**HEAP LEACH PAD:** A large impermeable foundation or pad used as a base for ore during heap leaching.

**MILL:** A processing facility where ore is finely ground and thereafter undergoes physical or chemical treatment to extract the valuable metals.

**MINERAL RESERVE:** See page 111 — “Summary Gold Mineral Reserves and Mineral Resources.”

**MINERAL RESOURCE:** See page 111 — “Summary Gold Mineral Reserves and Mineral Resources.”

**MINING CLAIM:** That portion of applicable mineral lands that a party has staked or marked out in accordance with applicable mining laws to acquire the right to explore for and exploit the minerals under the surface.

**MINING RATE:** Tons of ore mined per day or even specified time period.

**OPEN PIT:** A mine where the minerals are mined entirely from the surface.

**ORE:** Rock, generally containing metallic or non-metallic minerals, which can be mined and processed at a profit.

**ORE BODY:** A sufficiently large amount of ore that can be mined economically.

**OUNCES:** Troy ounces of a fineness of 999.9 parts per 1,000 parts.

**RECLAMATION:** The process by which lands disturbed as a result of mining activity are modified to support beneficial land use. Reclamation activity may include the removal of buildings, equipment, machinery and other physical remnants of mining, closure of tailings storage facilities, leach pads and other mine features, and contouring, covering and re-vegetation of waste rock and other disturbed areas.

**RECOVERY RATE:** A term used in process metallurgy to indicate the proportion of valuable material physically recovered in the processing of ore. It is generally stated as a percentage of the material recovered compared to the total material originally present.

**REFINING:** The final stage of metal production in which impurities are removed from the molten metal.

**STRIPPING:** Removal of overburden or waste rock overlying an ore body in preparation for mining by open pit methods. Expressed as the total number of tons mined or to be mined for each ounce of gold.

**TAILINGS:** The material that remains after all economically and technically recoverable precious metals have been removed from the ore during processing.

The accompanying notes are an integral part of these consolidated financial statements.

## NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

**Barrick Gold Corporation.** *Tabular dollar amounts in millions of United States dollars, unless otherwise shown. References to C\$, A\$, and ZAR are to Canadian dollars, Australian dollars, and South African Rands respectively.*

### 1 > NATURE OF OPERATIONS

Barrick Gold Corporation (“Barrick” or the “Company”) principally engages in the production and sale of gold, as well as related activities such as exploration and mine development. In 2006, we acquired Placer Dome Inc. (see note 3A), which resulted in a substantial increase in the scale of our mining operations. We also produce some copper and hold interests in a platinum group metals development project and a nickel development project, both located in Africa and a platinum project located in Russia. Our mining operations are concentrated in our four regional business units: North America, South America, Africa and Australia Pacific. We sell our gold and copper production into the world market.

### 2 > SIGNIFICANT ACCOUNTING POLICIES

#### A Basis of Preparation

These financial statements have been prepared under United States generally accepted accounting principles (“US GAAP”). In 2006, we amended the classification of certain expense items on the face of our income statement to provide enhanced disclosure of significant business activities and reflect the increasing significance of amounts spent on those activities. Previously exploration expense and project development expenses were grouped as a single line item. In 2006, we began to present these items separately to enable the amounts spent and trends in each type of expense to be more easily identified. Also in 2006, we began to present overheads incurred at our regional business units as a separate line item under “other operating expenses” to provide increased visibility of the amounts incurred. Previously these expenses were included in “other expense” and not separately identified. To ensure comparability of financial information, prior-year amounts have been reclassified to conform with the current year presentation.

#### B Consolidation

These consolidated financial statements include the accounts of Barrick Gold Corporation and those entities we have the ability to control either through voting rights or means other than voting rights. For incorporated joint ventures where we have the ability to control the joint venture, subject in some cases to protective rights held by our joint venture partners, we consolidate the joint venture and record a non-controlling interest for the interest held by our joint venture partner. In 2006 we finalized a joint venture agreement for the Pueblo Viejo project, which is held through an incorporated joint venture. Under the terms of the joint venture agreement we have the ability to control the operating, investing and financing decisions and therefore we consolidate this joint venture.

FIN 46R provides guidance on the identification and reporting of entities controlled through means other than voting rights and defines such entities as variable interest entities (“VIEs”). We apply this guidance to all entities, including those in the development stage, except for unincorporated joint ventures, which are outside the scope of FIN 46R. The principal entity that is a VIE is the entity that owns the Reko Dig project. Neither ourselves nor the other owners are the primary beneficiary for financial reporting purposes and we use the equity method of accounting for our interest in this entity (note 11).

For unincorporated joint ventures under which we hold an undivided interest in the revenue, expenses, assets and liabilities of the joint venture, we include our pro-rata interest in the assets, liabilities, revenue and expenses in our financial statements. Through the acquisition of Placer Dome in 2006 we acquired interests in the Cortez, Donlin Creek, Turquoise Ridge and Porgera mines which are held through unincorporated joint ventures under which we hold an undivided interest in the revenues, expenses, assets and liabilities. For further information refer to note 28.

The Donlin Creek property is being explored and developed under a Mining Venture Agreement that is between NovaGold and Barrick entered into in November 2002. Under the terms of the agreement, we currently hold a 30% interest in the project with the right to increase that interest to 70% by satisfying the following conditions on or before November 12, 2007: (1) funding of \$32 million of exploration and development expenditures on the project; (2) delivering a feasibility study to NovaGold; and (3) obtaining the approval of our Board of Directors to construct a mine on the property. At the end of March 2006, we had satisfied the funding condition. We are currently taking the steps necessary to complete the feasibility study. We record our 70% share of project expenditures each period, together with an account receivable for Nova Gold's share of those of

expenditures. Under a shareholders agreement, Calista Corporation has the right to acquire a 5% to 15% interest in the Donlin Creek project by paying a corresponding percentage of capitalized costs within 90 days of receipt of a completed feasibility study.

### **C Foreign Currency Translation**

The functional currency of all our operations is the US dollar. We translate non-US dollar balances into US dollars as follows:

- non-monetary assets and liabilities using historical rates;
- monetary assets and liabilities using closing rates with translation gains and losses recorded in earnings; and
- income and expenses using average exchange rates, except for expenses that relate to non-monetary assets and liabilities measured at historical rates, which are translated using the same historical rate as the associated non-monetary assets and liabilities.

### **D Use of Estimates**

The preparation of these financial statements requires us to make estimates and assumptions. The most significant ones are: quantities of proven and probable gold and copper reserves; the value of mineralized material beyond proven and probable reserves; future costs and expenses to produce proven and probable reserves; future commodity prices and foreign currency exchange rates; the future cost of asset retirement obligations; amounts of contingencies; and the fair value of acquired assets and liabilities including pre-acquisition contingencies. Using these estimates and assumptions, we make various decisions in preparing the financial statements including:

- The treatment of mine development costs as either an asset or an expense;
- whether long-lived assets are impaired, and if so, estimates of the fair value of those assets and any corresponding impairment charge;
- our ability to realize deferred income tax assets;
- the useful lives of long-lived assets and the measurement of amortization;
- the fair value of asset retirement obligations;
- the likelihood of loss contingencies occurring and the amount of any potential loss;
- whether investments are impaired;
- the amount of income tax expense;
- allocations of the purchase price in business combinations to assets and liabilities acquired; and
- the valuation of reporting units used in the initial allocation of goodwill and subsequent goodwill impairment tests.

As the estimation process is inherently uncertain, actual future outcomes could differ from present estimates and assumptions, potentially having material future effects on our financial statements.

### **Significant Changes in Estimates**

#### *Gold and Copper Mineral Reserves*

At the end of each fiscal year, as part of our annual business cycle, we prepare estimates of proven and probable gold and copper mineral reserves for each mineral property. We prospectively revise calculations of amortization of property, plant and equipment beginning in the first quarter of the next fiscal year. The effect of changes in reserve estimates on amortization expense for 2006 was a decrease of \$75 million (2005: \$28 million decrease; 2004: \$15 million decrease).

#### *Asset Retirement Obligations (AROs)*

Each quarter we update cost estimates, and other assumptions used in the valuation of AROs, for AROs at each of our mineral properties to reflect new events, changes in circumstances and any new information that is available. Changes in these cost estimates and assumptions have a corresponding impact on the fair value of the ARO. For closed mines any change in the fair value of AROs results in a corresponding charge or credit within other expense. A charge of \$53 million was recorded in 2006 for changes in cost estimates for AROs at closed mines (2005: \$15 million expense; 2004: \$22 million expense). For further details see note 20.

#### *Deferred Tax Valuation Allowances*

For a description of changes in valuation allowances, refer to note 8.

#### *Placer Dome Purchase Price Allocation*

In fourth quarter 2006, we finalized the valuations of assets and liabilities acquired on the acquisition of Placer Dome. In the final purchase price allocation, the significant changes from the preliminary allocation were an increase in the value of property, plant and equipment by \$2,104 million; recognition of intangible assets with a value of \$85 million; an increase in asset retirement obligations by \$215 million; and an increase in net deferred income tax liabilities by \$574 million. Goodwill arising in the final purchase price allocation amounted to \$6,506 million. In fourth quarter 2006, we prospectively revised the measurement of

amortization to reflect the final values of property, plant and equipment and intangible assets. We recorded an increase in amortization expense in fourth quarter 2006 of \$30 million for property, plant and equipment and \$10 million for intangible assets. We also revised the measurement of interest capitalized for fourth quarter 2006 to reflect final valuations of acquired qualifying assets that resulted in an increase in interest capitalized by \$14 million.

## **E Accounting Changes**

### **EITF 04-6 Accounting for Stripping Costs Incurred During Production in the Mining Industry**

In 2005, we adopted EITF 04-6 and changed our accounting policy for stripping costs incurred in the production phase. Prior to adopting EITF 04-6, we capitalized stripping costs incurred in the production phase, and we recorded amortization of the capitalized costs as a component of the cost of inventory produced each period. Under EITF 04-6, stripping costs are recorded directly as a component of the cost of inventory produced each period. Using an effective date of adoption of January 1, 2005, we recorded a decrease in capitalized mining costs of \$226 million; an increase in the cost of inventory of \$232 million; and a \$6 million credit to earnings for the cumulative effect of this change. For 2005, the effect of adopting EITF 04-6 compared to the prior policy was an increase in net income of \$44 million (\$0.08 per share), excluding the cumulative effect on prior periods.

### **FAS 123R, Accounting for Stock-Based Compensation**

On January 1, 2006, we adopted FAS 123R. Prior to this date we applied FAS 123 and accounted for stock options under the intrinsic value method, recording compensation cost for stock options as the excess of the market price of the stock at the grant date of an award over the exercise price. Historically, the exercise price of stock options equaled the market price of the stock at the grant date resulting in no recorded compensation cost. We provided pro forma disclosure of the effect of expensing the fair value of stock options.

In September 2006, the SEC released a letter on accounting for stock options. The letter addresses the determination of the grant date and measurement date for stock option awards. For Barrick, the stock option grant date is the date when the details of the award, including the number of options granted by individual and the exercise price, are approved. The application of the principles in the letter issued by the SEC did not change the date that has been historically determined as the measurement date for stock option grants.

We adopted FAS 123R using the modified prospective method, which meant that financial statements for periods prior to adoption were not restated. From January 1, 2006 we record compensation expense for all new stock option grants based on the grant date fair value, amortized on a straight-line basis over the vesting period. We also record compensation expense for the unvested portion of stock option grants occurring prior to January 1, 2006, based on the grant date fair value that was previously estimated and used to provide for pro forma disclosures for financial statement periods prior to 2006, amortized on a straight-line basis over the remaining vesting period for those unvested stock options.

Compensation expense for stock options was \$27 million in 2006, and is presented as a component of cost of sales, corporate administration and other expense, consistent with the classification of other elements of compensation expense for those employees who had stock options. The recognition of compensation expense for stock options reduced earnings per share for 2006 by \$0.03 per share. The application of FAS 123R to Restricted Share Units (RSUs) and Deferred Share Units (DSUs) did not result in any significant change in the method of accounting for RSUs or DSUs. See note 25 for further information on stock-based compensation.

### **FAS 151, Inventory Costs**

FAS 151 specifies the general principles applicable to the pricing and allocation of certain costs to inventory. FAS 151 is the result of a broader effort by the Financial Accounting Standards Board (FASB) to improve the comparability of cross-border financial reporting by working with the International Accounting Standards Board (IASB) toward development of a single set of high-quality accounting standards. As part of that effort, the FASB and the IASB identified opportunities to improve financial reporting by eliminating certain narrow differences between their existing accounting standards. The accounting for inventory costs, in particular, abnormal amounts of idle facility expense, freight, handling costs, and spoilage, is one such narrow difference that the FASB decided to address by issuing FAS 151. As historically worded in ARB 43, Chapter 4, the term "abnormal" was not defined and its application could lead to unnecessary noncomparability of financial reporting. FAS 151 eliminates that term. Under FAS 151, abnormal amounts of idle facility expense, freight, handling costs and wasted materials are recognized as current period charges rather than capitalized to inventory. FAS 151 also requires that the allocation of fixed production overhead to the cost of inventory be based on the normal capacity of production facilities.

FAS 151 was applicable prospectively from January 1, 2006 and we modified our inventory accounting policy consistent with its requirements. Under our modified accounting policy for inventory, production-type costs that are abnormal are excluded from inventory and charged directly to the cost of sales. Interruptions to normal activity levels at a mine could occur for a variety of reasons including equipment failures and major maintenance activities, strikes, power supply interruptions and adverse weather conditions. When such interruptions occur we evaluate the impact on the

cost of inventory produced in the period, and to the extent the actual cost exceeds the cost based on normal capacity we expense any excess directly to cost of sales. The adoption of FAS 151 did not have any significant effect on our financial statements.

### **FAS 158, Employers' Accounting for Defined Benefit Pension and Other Post-retirement Plans**

In September 2006, the FASB issued FAS 158 that requires employers to fully recognize the obligations associated with single-employer defined benefit pension, retiree health care and other post-retirement plans in their financial statements. FAS 158 was developed to respond to concerns that past accounting standards needed to be revisited to improve the transparency and usefulness of the information reported about them. Under past accounting standards, the funded status of an employer's post-retirement benefit plan (i.e., the difference between the plan assets and obligations) was not always completely reported in the balance sheet. Employers reported an asset or liability that almost always differed from the plan's funded status because previous accounting standards allowed employers to delay recognition of certain changes in plan assets and obligations that affected the costs of providing such benefits. Past standards only required an employer to disclose the complete funded status of its plans in the notes to the financial statements.

FAS 158 requires recognition of the funded status of a benefit plan on the balance sheet — measured as the difference between plan assets at fair value (with limited exceptions) and the benefit obligation, as at the fiscal year-end. For a pension plan, the benefit obligation is the projected benefit obligation; for any other post-retirement benefit plan, such as a retiree health care plan, the benefit obligation is the accumulated post-retirement benefit obligation. FAS 158 also requires recognition, as a component of other comprehensive income, net of tax, of the gains or losses and prior service costs or credits that arise during the period but are not recorded as components of net periodic benefit cost. Amounts recorded in accumulated other comprehensive income are adjusted as they are subsequently recorded as components of net periodic cost. FAS 158 requires disclosure of information about certain effects of net periodic benefit cost for the next fiscal year that arise from delayed recognition of the gains or losses, prior service costs or credits, and transition asset or obligation.

We adopted the provisions of FAS 158 in 2006, as required, except for the requirement to measure the plan assets and benefit obligations at the fiscal year-end, which is effective in fiscal years ending after December 15, 2008. The adoption of FAS 158 did not significantly impact our financial statements, and is disclosed in note 26.

### **SEC Staff Accounting Bulletin No. 108 — Considering the Effects of Prior Year Misstatements when Quantifying Misstatements in Current Year Financial Statements (SAB 108)**

In September 2006, the SEC issued SAB 108. SAB 108 addresses the multiple methods used to quantify financial statement misstatements and evaluate the accumulation of misstatements on the balance sheet. SAB 108 requires registrants to evaluate prior period misstatements using both a balance sheet approach ("the iron curtain method") and an income statement approach ("the rollover method"). SAB 108 is effective for interim and annual periods ending after November 15, 2006. SAB 108 allows a one-time transitional cumulative effect adjustment to retained earnings as of January 1, 2006 for errors that were previously deemed not material, but would be material under the requirements of SAB 108. Barrick has historically used the rollover method in quantifying potential financial statement misstatements. As required by SAB 108, we re-evaluated prior period immaterial errors using the iron curtain method. Based upon the result of our evaluation, we did not identify any material errors or misstatements that were previously deemed not material under the rollover approach. Going forward, we will be applying both methods in quantifying potential financial statement errors and misstatements, as required by SAB 108.

## **F Accounting Developments**

### **FASB Interpretation No. 48 — Accounting for Uncertainty in Tax Positions (FIN 48)**

In June 2006, the FASB issued FIN 48 — Accounting for Uncertainty in Income Taxes, an interpretation of FASB Statement No. 109. The interpretation has been developed because of diversity in practice for accounting for uncertain tax positions. Some entities record tax benefits for uncertain tax positions as they are filed on the income tax return, while others use either gain contingency accounting or a probability threshold.

Under FIN 48, an entity should presume that a taxing authority will examine all tax positions with full knowledge of all relevant information. Therefore, when evaluating a tax position for recognition and measurement, consideration of the risk of examination is not appropriate. In applying the provisions of FIN 48, there are distinct recognition and measurement evaluations. The first step is to evaluate the tax position for recognition by determining if the weight of available evidence indicates it is more likely than not, based solely on the technical merits, that the position will be

sustained on audit, including resolution of related appeals or litigation processes, if any. The second step is to measure the appropriate amount of the benefit to recognize. The amount of benefit to recognize will be measured as the maximum amount which is more likely than not to be realized. The tax position should be de-recognized in the first period when it is no longer more likely than not of being sustained. On subsequent recognition and measurement, the maximum amount which is more likely than not to be recognized at each reporting date will represent management's best estimate given the information available at the reporting date, even though the outcome of the tax position is not absolute or final. Subsequent recognition, de-recognition, and measurement should be based on new information. A liability for interest or penalties or both will be recognized as deemed to be incurred based on the provisions of the tax law, that is, the period for which the taxing authority will begin assessing the interest or penalties or both. The amount of interest expense recognized will be based on the difference between the amount recognized in accordance with this interpretation and the benefit recognized in the tax return.

Under FIN 48, an entity must disclose its policy on the classification of interest and penalties and also disclose a reconciliation of the total amounts of unrecognized tax benefits at the beginning and the end of each period. On transition, the change in net assets due to applying the provisions of the interpretation will be considered a change in accounting principle with the cumulative effect of the change treated as an offsetting adjustment to the opening balance of retained earnings in the period of transition. The interpretation is effective beginning January 1, 2007. We are presently evaluating the impact of this interpretation on our financial statements.

### **FAS 157, Fair Value Measurements**

In September 2006, the FASB issued FAS 157 that provides enhanced guidance for using fair value to measure assets and liabilities. FAS 157 is meant to ensure that the measurement of fair value is more comparable and consistent, and improve disclosure about fair value measures. As a result of FAS 157 there is now a common definition of fair value to be used throughout US GAAP. FAS 157 applies whenever US GAAP requires (or permits) measurement of assets or liabilities at fair value. FAS 157 does not address when the use of fair value measurements is required.

FAS 157 defines fair value as "the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date." This definition of fair value retains the exchange-price notion contained (either explicitly or implicitly) in many earlier US GAAP definitions of fair value. However, FAS 157 clarifies that the basis for a fair value measure is the price at which a company would sell or otherwise dispose of its assets or pay to settle a liability (i.e., an exit price), not the market price at which a company acquires its assets or assumes a liability (i.e., not an entry price). The exit price concept is based on current expectations about the future inflows associated with the asset and the future outflows associated with the liability from the perspective of market participants. Under FAS 157, a fair value measure should reflect all of the assumptions that market participants would use in pricing the asset or liability including, for example, an adjustment for risk inherent in a particular valuation technique used to measure fair value.

In measuring fair value for a financial statement item, FAS 157 gives the highest priority to quoted prices in active markets. However, FAS 157 also permits the use of unobservable inputs for situations in which there is little, if any, market activity for the asset or liability being measured. Whether there is significant market activity or not, the objective is a market-based measure, rather than an entity-specific measure. FAS 157 also provides guidance on the effect of changes in credit risk on a fair value measure; investment blocks; and restricted securities.

FAS 157 expands disclosure about the use of fair value to measure assets and liabilities. FAS 157 requires disclosures intended to provide information about (1) the extent to which companies measure assets and liabilities at fair value, (2) the methods and assumptions used to measure fair value, and (3) the effect of fair value measures on earnings. FAS 157 is effective for financial statements issued for fiscal years beginning after November 15, 2007. Early adoption is permitted. We are currently assessing the impact of FAS 157 on our financial statements.

### **FSP AUG AIR -1 — Accounting for Planned Major Maintenance Activities (FSP Air-1)**

In September 2006, the FASB issued FSP AIR-1 which amends guidance from the AICPA Industry Audit Guide, Audits of Airlines ("Airline Guide") with respect to planned major maintenance activities and makes this guidance applicable to entities in all industries. Of the three methods of accounting for planned major maintenance allowed by FSP AIR-1, we plan to use the built-in overhaul method. The built-in overhaul method is based on segregation of plant and equipment costs into those that should be depreciated over the useful life of the asset and those that require overhaul at periodic

intervals. Thus, the estimated cost of the overhaul component included in the purchase price of an asset is set up separately from the cost of the asset and is amortized to the date of the initial overhaul. The cost of the initial overhaul is then capitalized and amortized to the next overhaul, at which time the process is repeated.

FSP AIR-1 is effective for the first fiscal year beginning after December 15, 2006. The provisions are applied retrospectively for all financial statements presented unless it is impractical to do so. We intend to apply the provisions of FSP AIR-1 beginning January 1, 2007. We are in the process of determining the effect that adoption of this FSP will have on prior periods.

## G Other Significant Accounting Policies

|   | Note | Page |
|---|------|------|
| Acquisitions and divestitures                 | 3    | 67   |
| Segment information                           | 4    | 71   |
| Revenue and gold sales contracts              | 5    | 73   |

| Stock-based compensation                      | 25   | 102  |
| Post-retirement benefits                      | 26   | 105  |
| Litigation and claims                         | 27   | 108  |
| Unincorporated joint ventures                 | 28   | 110  |

## 3 ACQUISITIONS AND DIVESTITURES

### A Acquisition of Placer Dome Inc. (“Placer Dome”) Placer Dome Offer and Acceptance

In first quarter 2006 we acquired 100% of the outstanding common shares of Placer Dome. Placer Dome was one of the world's largest gold mining companies. It had 12 mining operations based in North America, South America, Africa and Australia/Papua New Guinea, as well as four projects that are in various stages of exploration/development. Its most significant mines were Cortez in the United States, Zaldivar in Chile, Porgera in Papua New Guinea, North Mara in Tanzania and South Deep in South Africa. The most significant projects are Cortez Hills and Donlin Creek in the United States, and Pueblo Viejo in the Dominican Republic. The business combination between ourselves and Placer Dome was an opportunity to create a Canadian-based leader in the global gold mining industry, which strengthens our competitive position, including in respect of gold reserves, gold production, growth opportunities, and balance sheet strength.

#### Accounting for the Placer Dome Acquisition

The Placer Dome acquisition has been accounted for as a purchase business combination, with Barrick as the accounting acquirer. We acquired Placer Dome on January 20, 2006, with the results of operations of Placer Dome consolidated from January 20, 2006 onwards. The purchase cost was \$10 billion and was funded through a combination of common shares issued, the drawdown of a \$1 billion credit facility, and cash resources.

|   |                 |
|---|-----------------|
| Value of 322.8 million Barrick common shares issued at \$27.14 per share <sup>1</sup> | \$ 8,761        |
| Value of 2.7 million fully vested stock options                                       | 22              |
| Cash  | 1,239           |
| Transaction costs   | 32              |
|   | <b>\$10,054</b> |

<sup>1</sup> The measurement of the common share component of the purchase consideration represents the average closing price on the New York Stock Exchange for the two days prior to and two days after the public announcement on December 22, 2005

of our final offer for Placer Dome.

In accordance with the purchase method of accounting, the purchase cost was allocated to the underlying assets acquired and liabilities assumed based primarily upon their estimated fair values at the date of acquisition. The estimated fair values were based on a combination of independent appraisals and internal estimates. We concluded that the excess of purchase cost over the net identifiable tangible and intangible assets acquired represents goodwill. Goodwill arising on the acquisition of Placer Dome principally represents the ability for the company to continue as a going concern by finding new mineral reserves as well as the value of synergies that we expect to realize as a direct consequence of the acquisition of Placer Dome.

The principal valuation methods for major classes of assets and liabilities were:

|   |   |
|---|---|
| Inventory   | Finished goods and work in process valued at estimated selling prices less disposal costs, costs to complete and a reasonable profit allowance for the completing and selling effort. |
| Building and equipment  | Reproduction and/or replacement cost or market value for current function and service potential, adjusted for physical, functional and economic obsolescence.                         |
| Proven and probable reserves and value beyond proven and probable reserves at producing mines | Multi-period excess earnings approach considering the prospective level of cash flows and fair value of other assets at each mine.  |
| Development projects  | Discounted future cash flows considering the prospective level of cash flows from future operations and necessary capital cost expenditures.  |
| Exploration properties  | Appraised values considering costs incurred, earn-in agreements and comparable market transactions, where applicable.   |
| Intangible assets   | Value based on potential cost savings, price differential, discounted future cash flows, or comparable market transactions, as applicable.  |
| Long-term debt and derivative instruments   | Estimated fair values consistent with the methods disclosed in note 19D.  |
| Asset retirement obligations  | Estimated fair values consistent with the methods disclosed in note 20.   |

### Summary Purchase Price Allocation

|   |                 |
|---|-----------------|
| Cash  | \$ 1,102        |
| Inventories   | 428             |
| Other current assets                                | 198             |
| Property, plant and equipment                       |                 |
| Buildings, plant and equipment                      | 2,946           |
| Proven and probable reserves                        | 1,571           |
| Value beyond proven and probable reserves           | 419             |
| Intangible assets (note 15)                         | 85              |
| Assets of discontinued operations <sup>1</sup>      | 1,744           |
| Other assets  | 347             |
| Goodwill  | 6,506           |
| <b>Total assets</b>                                 | <b>15,346</b>   |
| Current liabilities                                 | 669             |
| Liabilities of discontinued operations <sup>1</sup> | 107             |
| Derivative instrument liabilities                   | 1,729           |
| Long-term debt                                      | 1,252           |
| Asset retirement obligations                        | 387             |
| Deferred income tax liabilities                     | 686             |
| <b>Total liabilities</b>                            | <b>4,830</b>    |
| Non-controlling interests                           | 462             |
| <b>Net assets acquired</b>                          | <b>\$10,054</b> |

<sup>1</sup> Includes operations that were sold to Goldcorp.

### Severance Costs

|   |             |
|---|-------------|
| Amounts recorded at acquisition             | \$ 48       |
| Settlements in 2006                         | 45          |
| <b>Amounts outstanding at Dec. 31, 2006</b> | <b>\$ 3</b> |

At acquisition we recorded liabilities totaling \$48 million that primarily relate to employee severance at Placer Dome offices that were closed during the year. We expect to pay all the outstanding amounts by second quarter 2007.

<sup>1</sup> Adjustments to reflect certain estimated effects of purchase accounting.

<sup>2</sup> Adjustments to reflect the estimated effects of the sale of certain Placer Dome operations to Goldcorp and Gold Fields.

<sup>3</sup> Exclusive of amortization.

#### Basis of Presentation

This unaudited pro forma consolidated financial statement information has been prepared by us for illustrative purposes only to show the effect of the acquisition of Placer Dome by Barrick. The unaudited pro forma consolidated statement information assumes that Barrick acquired Placer Dome effective January 1, 2005. In conjunction with the offer to acquire Placer Dome, Barrick entered into an agreement with Goldcorp Inc. ("Goldcorp") for the sale of certain operations and projects of Placer Dome. This unaudited pro forma consolidated financial statement information assumes that sale of these operations to Goldcorp occurred on January 1, 2005. Pro forma adjustments for the assumed effect of the sale of these operations to Goldcorp on the results of operations of Barrick have been reflected in this unaudited pro forma consolidated financial statement information. Pro forma adjustments also reflect the sale of the South Deep mine in South Africa to Gold Fields Limited ("Gold Fields"), had the sale occurred on January 1, 2005 (note 3B).

The unaudited pro forma consolidated financial statement information is not intended to be indicative of the results that would actually have occurred, or the results expected in future periods, had the events reflected herein occurred on the dates indicated. Any potential synergies that may be realized and integration costs that may be incurred have been excluded from the unaudited pro forma financial statement information, including Placer Dome transaction costs and amounts payable under change of control agreements to certain

members of management that are estimated at a combined total of \$93 million. The information prepared is only a summary.

### Pro Forma Assumptions and Adjustments

Certain adjustments have been reflected in this unaudited pro forma consolidated statement of income to illustrate the effects of purchase accounting and to reflect the impact of the sale of certain Placer Dome operations to Goldcorp, where the impact could be reasonably estimated. The principal purchase accounting adjustments relate to amortization, income taxes and interest expense, that have been adjusted to the accounting base recognized for each in the business combination.

### Pro Forma Adjustments

The unaudited pro forma consolidated statement of income reflects the following adjustments as if the acquisition of 100% of Placer Dome and subsequent sale of certain operations to Goldcorp had occurred on January 1, 2005:

- (a) An increase in amortization expense by \$131 million to reflect the value assigned to property, plant and equipment and intangible assets in the purchase price allocation.
- (b) An increase in interest income by \$5 million for the year ended December 31, 2005 to reflect interest income earned on cash proceeds generated by the assumed exercise of Placer Dome stock options.
- (c) An increase in interest expense by \$48 million for the year ended December 31, 2005 to reflect the interest costs (net of amounts that would have been capitalized to Barrick development projects) relating to the cash component of the Offer that was financed through temporary credit facilities. A decrease in interest expense by \$49 million for the year ended December 31, 2005 to reflect the assumed avoidance of interest on the temporary financing for the cash component of the Offer assuming the repayment of such financing from the receipt of cash proceeds from the sale of certain Placer Dome operations to Goldcorp.
- (d) A decrease in other expense by \$21 million to de-recognize non-recurring transaction costs recorded by Placer Dome relating to the Barrick offer.
- (e) A debit to tax expense of \$8 million for the year ended December 31, 2005 to reflect the tax effect of the pro forma purchase adjustments in (a) through (d).
- (f) Adjustments to de-recognize the revenues and expenses for the year ended December 31, 2005 relating to the Placer Dome operations that will be sold to Goldcorp and Gold Fields.
- (g) Adjustments to de-recognize income tax expense for the operations that will be sold to Goldcorp and Gold Fields for the year ended December 31, 2005 and to record the tax effect of other pro forma adjustments relating to the sale of certain Placer Dome operations to Goldcorp and Gold Fields.

### Pro Forma Earnings Per Share

|                                 | \$ 297 | \$ — |

<sup>1</sup> Amounts are disclosed net of non-controlling interests of \$24 million.

*South Deep*

On December 1, 2006, we sold our 50% interest in the South Deep mine in South Africa to Gold Fields. Gold Fields is responsible for all liabilities relating solely to the assets of the mine, including employment commitments and environmental, closure and reclamation liabilities. The consideration on closing was \$1,517 million, of which \$1,209 million was received in cash and \$308 million in Gold Fields shares. On closing we recorded a gain of \$288 million, representing the consideration received less transaction costs and the carrying amount of net assets of South Deep, including goodwill relating to South Deep of \$651 million.

The results of the operations of South Deep in 2006 are presented under “discontinued operations” in the income statement and cash flow statement. As required by accounting rules applicable to discontinued operations, amortization of property, plant and equipment at South Deep ceased on September 1, 2006, the date when they were classified as held for sale, and we allocated interest expense of \$2 million to these discontinued operations.

In second quarter 2006, a loaded skip and 6.7 kilometers of rope fell 1.6 kilometers down the South Deep mine’s Twin Shaft complex during routine maintenance, causing extensive damage but no injuries. Repair costs for assets that were damaged were expensed as incurred. We were insured for property damage and a portion of business interruption losses. Insurance recoveries of \$12 million (based on our 50% interest in South Deep) were recorded within income from discontinued operations for the period to December 1, 2006.

#### *Operations Sold to Goldcorp*

In second quarter 2006, we sold all of Placer Dome’s Canadian properties and operations (other than Placer Dome’s office in Vancouver), including all mining, reclamation and exploration properties, Placer Dome’s interest in the La Coipa mine in Chile, 40% of Placer Dome’s interest in the Pueblo Viejo project in the Dominican Republic, certain related assets and, our share in Agua de la Falda S.A., which included our interest in the Jeronimo project, to Goldcorp Inc. (“Goldcorp”) (collectively, the “Operations sold to Goldcorp”). Goldcorp is responsible for all liabilities relating solely to these properties and operations, including employment commitments and environmental, closure and reclamation liabilities.

The sales proceeds for the operations sold to Goldcorp were \$1,641 million. The aggregate net amount of assets and liabilities of these operations were recorded in the purchase price allocation at \$1,641 million based on the terms of a sale agreement with Goldcorp that was in place at the time we acquired Placer Dome. The results of the operations sold to Goldcorp were included under “discontinued operations” in the income statement and cash flow statement until closing. Interest expense of \$21 million was allocated to the results from the operations sold to Goldcorp. No gain or loss arose on closing of the sale.

#### **C Acquisition of Pioneer Metals Inc. (“Pioneer”)**

In 2006, we acquired control of Pioneer through the acquisition of 59.2 million shares, representing approximately 91% of the outstanding shares of Pioneer. Total cash consideration paid was \$53 million. Pioneer has a portfolio of exploration properties and interests, including the Grace property which is adjacent to NovaGold Resources Inc.’s Galore Creek project. This transaction represents a purchase of assets, and we allocated the purchase price to the assets acquired.

#### **D Sale of Paddington Operations**

In November 2006, we signed a sale agreement for the Paddington operations in Australia, under which we will receive cash proceeds of \$39 million. The Paddington operations, which form part of the Kanowna mine acquired in the acquisition of Placer Dome, consist of the Paddington mill and certain land tenements in the area near the mill. We expect the transaction to close in first quarter 2007.

#### **4 > SEGMENT INFORMATION**

In 2004, we adopted a regional business unit approach to the management of our mining operations. Our operations were organized geographically in the following regions: North America, South America, Australia/Africa, and Russia/Central Asia. Notwithstanding this management structure we reported information on a mine by mine basis to the chief operating decision maker, and therefore concluded that our operating segments represented individual mines and development projects. In 2006, upon completion of the Placer Dome acquisition and integration of the acquired Placer Dome mining operations, we created a separate Africa business unit distinct from Australia and added the Porgera mine in Papua New Guinea to the Australia business unit, at the same time renaming it Australia Pacific. We revised the format of information provided to the Chief Operating Decision Maker to be consistent with our regional business unit structure, distinguishing between gold and copper mining operations. In first quarter 2006, we revised our operating segment disclosure to be consistent with the internal management structure and reporting format changes, with restatement of comparative information to conform to the current period presentation. In fourth quarter 2006 on closing of a transaction to vend-in our Russian gold assets to Highland Gold (see note 11), we concluded that we no longer had a Russia/Central Asia operating segment and segment disclosures have been revised to exclude Russia/Central Asia.

|  | \$ 1,151 | \$ —     | \$ —     |

<sup>1</sup> Revenues include amounts transferred from OCI to earnings for commodity cash flow hedges (see note 19C and 24).

### Products

All of our gold mining operations produce gold in doré form, except Eskay Creek, which produces gold concentrate and gold ore; Bulyanhulu which produces both gold doré and gold concentrate; and Osborne which produces a concentrate that contains both gold and copper. Gold doré is unrefined gold bullion bars usually consisting of 90% gold that is refined to pure gold bullion prior to sale to our customers. Gold concentrate is a processing product containing the valuable ore mineral (gold) from which most of the waste mineral has been eliminated, that undergoes a smelting process to convert it into gold bullion. Gold bullion is sold primarily in the London spot market or under gold sales contracts. Gold concentrate is sold to third-party smelters.

At our Zaldívar mine we produce pure copper cathode, which consists of 99.9% copper, a form that is deliverable for sale in world metals exchanges.

### Accounting Policy

We record revenue when the following conditions are met: persuasive evidence of an arrangement exists; delivery and transfer of title (gold revenue only) have occurred under the terms of the arrangement; the price is fixed or determinable; and collectability is reasonably assured. Revenue is presented net of direct sales taxes of \$16 million (2005: \$nil; 2004: \$nil).

### Gold Bullion Sales

We record revenue from gold and silver bullion sales at the time of physical delivery, which is also the date that title to the gold or silver passes. The sales price is fixed at the delivery date based on either the terms of gold sales contracts or the gold spot price. Incidental revenues from the sale of by-products such as silver are classified within cost of sales.

**Gold Sales Contracts**

At December 31, 2006, we had fixed-price gold sales contracts with various customers for a total of 10.8 million ounces of future gold production and floating spot price gold sales contracts for a total of 1.2 million ounces. We had allocated 9.5 million ounces of the fixed-price gold sales contracts to our development projects ("Project Gold Sales Contracts"). In addition to the gold sales contracts allocated to the development projects, we had 1.3 million ounces of Corporate gold sales contracts that we intend to settle through delivery of future gold production from our operating mines.

In 2007, in the period through February 21, 2007, we delivered a total of 0.9 million ounces of our 2007 gold production into fixed-price Corporate Gold Sales Contracts at an average price of \$340 per ounce. In 2007, we also converted 0.4 million ounces of fixed-price Corporate Gold Sales Contracts into floating spot price contracts, for a total of 1.6 million ounces of floating spot price contracts, whereby the price realized will represent spot less an average fixed reduction of about \$240 per ounce.

The terms of gold sales contracts are governed by master trading agreements (MTAs) that we have in place with customers. The contracts have final delivery dates primarily over the next 10 years, but we have the right to settle these contracts at any time over this period. Contract prices are established at inception through to an interim date. If we do not deliver at this interim date, a new interim date is set. The price for the new interim date is determined in accordance with the MTAs which have contractually agreed price adjustment mechanisms based on the market gold price. The MTAs have both fixed and floating price mechanisms. The fixed-price mechanism represents the market price at the start date (or previous interim date) of the contract plus a premium based on the difference between the forward price of gold and the current market price. If at an interim date we opt for a floating price, the floating price represents the spot market price at the time of delivery of gold adjusted based on the difference between the previously fixed price and the market gold price at that interim date. The final realized selling price under a contract primarily depends upon the timing of the actual future delivery date, the market price of gold at the start of the contract and the actual amount of the premium of the forward price of gold over the spot price of gold for the periods that fixed selling prices are set.

### Mark-to-Market Value

| \$ millions                              | Total ounces in<br>millions | At Dec. 31, 2006<br>value <sup>1</sup> |
|--|-----------------------------|--|
| Project Gold Sales Contracts             | 9.5                         | \$ (3,187)                             |
| Corporate Gold Sales Contracts           | 1.3                         | (387)                                  |
| Floating Spot Price Gold Sales Contracts | 1.2                         | (260)                                  |
|  | 12.0                        | \$ (3,834)                             |

<sup>1</sup> At a spot gold price of \$632 per ounce.

The difference between the forward price of gold and the current market price, referred to as contango, can be expressed as a percentage that is closely correlated to the difference between US dollar interest rates and gold lease rates. Historically short-term gold lease rates have generally been lower than longer-term rates. We use gold lease rate swaps to achieve a more economically optimal term structure for gold lease rates implicit in contango. Under the swaps we receive a fixed gold lease rate, and pay a floating gold lease rate, on a notional 0.5 million ounces of gold spread from 2007 to 2013. The swaps are associated with fixed-price gold sales contracts with expected delivery dates beyond 2007. Lease rate swaps are classified as non-hedge derivatives (note 19C) and had a positive fair value of \$64 million at December 31, 2006 (2005: \$66 million).

Floating spot price sales contracts were previously fixed price forward sales contracts for which, in accordance with the terms of our MTAs, we have elected to receive floating spot gold and silver prices, adjusted based on the difference between the spot price and the contract price at the time of such election. Floating prices were elected for these contracts so that we could economically regain spot gold price leverage under the terms of delivery into these contracts. Furthermore, floating price mechanisms were elected for these contracts at a time when the then current market price was higher than the fixed price in the contract. The mark-to-market value of these contracts (at December 31, 2006) was negative \$260 million, which equates to an average reduction to the future spot sales price of approximately \$221 per ounce, when we deliver gold at spot prices against these contracts.

At December 31, 2006, one counterparty made up 12% of the total ounces committed under gold sales contracts.

### Concentrate Sales

Under the terms of concentrate sales contracts with independent smelting companies, gold and copper sales prices are set on a specified future date after shipment based on market prices. We record revenues under these contracts at the time of shipment, which is also when title passes to the smelting companies, using forward market gold and copper prices on the expected date that final sales prices will be fixed. Variations between the price recorded at the shipment date and the actual final price set under the smelting contracts are caused by changes in market gold and copper prices, and result in an embedded derivative in the accounts receivable. The embedded derivative is recorded at fair value each period until final settlement occurs, with changes in fair value classified as a component of revenue. The notional amount typically outstanding in accounts receivable is between ten and fifteen thousand ounces of gold and 4 and 7 million pounds of copper.

### Copper Cathode Sales

Under the terms of copper cathode sales contracts, copper prices are set on a specified future date based

upon market commodity prices plus certain price adjustments. Revenue is recognized at the time of shipment when risk of loss passes to the customer, and collectability is reasonably assured. Revenue is measured using forward market prices on the expected date that final selling prices will be fixed. Variations occur between the price recorded on the date of revenue recognition and the actual final price under the terms of the contracts due to changes in market copper prices, which result in the existence of an embedded derivative in the accounts receivable. This embedded derivative is recorded at fair value each period until final settlement occurs, with changes in fair value classified as a component of revenue. The notional amount typically outstanding in accounts receivable is between 20 and 30 million pounds of copper.

## 6 > COST OF SALES

| For the years ended Dec. 31      | Gold     |          |          | Copper |      |      |
|----------------------------------|----------|----------|----------|--------|------|------|
|                                  | 2006     | 2005     | 2004     | 2006   | 2005 | 2004 |
| Cost of goods sold <sup>1</sup>  | \$ 2,289 | \$ 1,265 | \$ 1,128 | \$ 390 | \$ — | \$ — |
| By-product revenues <sup>2</sup> | (123)    | (132)    | (146)    | (1)    | —    | —    |
| Royalty expense                  | 150      | 63       | 53       | 4      | —    | —    |
| Mining production taxes          | 27       | 18       | 12       | —      | —    | —    |
|                                  | \$ 2,343 | \$ 1,214 | \$ 1,047 | \$ 393 | \$ — | \$ — |

<sup>1</sup> Cost of goods sold includes accretion expense at producing mines of \$31 million (2005: \$11 million; 2004: \$11 million). Cost of goods sold includes charges to reduce the cost of inventory to net realizable value as follows: \$28 million in 2006; \$12 million in 2005 and \$9 million in 2004. The cost of inventory sold in the period reflects all components capitalized to inventory, except that, for presentation purposes, the component of inventory cost relating to amortization of property, plant and equipment is classified in the income statement under "amortization". Some companies present this amount under "cost of sales". The amount presented in amortization rather than cost of sales was \$693 million in 2006; \$409 million in 2005 and \$425 million in 2004. In 2004, cost of goods sold includes the reversal of \$15 million of accrued costs on resolution of the Peruvian tax assessment (see note 8).

<sup>2</sup> We use silver sales contracts to sell a portion of silver produced as a by-product. Silver sales contracts have similar delivery terms and pricing mechanisms as gold sales contracts. At December 31, 2006, we had fixed-price commitments to deliver 13.1 million ounces of silver at an average price of \$6.45 per ounce and floating spot price silver sales contracts for 7.0 million ounces over periods primarily of up to 10 years. The mark-to-market on silver sales contracts at December 31, 2006 was negative \$100 million (2005: negative \$52 million).

## Royalties

Certain of our properties are subject to royalty arrangements based on mineral production at the properties. The most significant royalties are at the Goldstrike, Bulyanhulu and Veladero mines and the Pascua-Lama project. The primary type of royalty is a net smelter return (NSR) royalty. Under this type of royalty we pay the holder an amount calculated as the royalty percentage multiplied by the value of gold production at market gold prices less third-party smelting, refining and transportation costs. Most Goldstrike production is subject to an NSR or net profits interest (NPI) royalty. The highest Goldstrike royalties are a 5% NSR and a 6% NPI royalty. Bulyanhulu is subject to an NSR-type royalty of 3%. Pascua-Lama gold production from the areas located in Chile is subject to a gross proceeds sliding scale royalty, ranging from 1.5% to 9.8%, and a 2% NSR on copper production. For areas located in Argentina, Pascua-Lama is subject to a 3% NSR on extraction of all gold, silver and other minerals. Production at Veladero is subject to a 3.75% NSR on extraction of all gold, silver and other minerals. Production at Lagunas Norte is subject to a 2.51% NSR on extraction of all gold and other minerals. Through the acquisition of Placer Dome we assumed various royalty obligations at the Placer Dome mines. All production at Cortez is subject to a 1.5% gross smelter return ("GSR") royalty, with a further GSR royalty over the Pipeline/South Pipeline deposit (graduating from 0.4% to 5.0% based on the price of gold) and a net value royalty of 5% over a portion of the Pipeline/South Pipeline deposit. Production at the Pueblo Viejo project is subject to a 3.2% NSR from the sale of minerals less costs incurred on mining extraction or removal of minerals from the leased properties. Production at Donlin Creek project is subject to a 1.5% net smelter royalty for the first five years, and a 4.5% net smelter royalty thereafter. Production at the North Mara mine is subject to an NSR-type royalty of 3% on extraction of all minerals, and an additional 1.1% land tenement royalty for production out of the Gokona pit that is payable to the Tanzanian Revenue Authority. Production at the Porgera mine is subject to a 2% net smelter royalty payable to the National Government Department of Mining, which then distributes it to the Enga Provincial government, the Porgera District Authority, and local landowners. Production in Queensland and Western Australia is subject to a royalty ranging from 2.5% to 2.7% of gold revenues.

Royalty expense is recorded at the time of sale of gold production, measured using the applicable royalty percentage for NSR royalties or estimates of NPI amounts.

## 7 > OTHER (INCOME) EXPENSE

### A Other Operating Expenses

| For the years ended Dec. 31               | 2006   | 2005  | 2004  |
|---|--------|-------|-------|
| Regional business unit costs <sup>1</sup> | \$ 88  | \$ 36 | \$ 24 |
| Community development costs <sup>2</sup>  | 15     | —     | —     |
| Environmental remediation costs           | 8      | 13    | 14    |
| World Gold Council fees                   | 13     | 10    | 9     |
|   | \$ 124 | \$ 59 | \$ 47 |

<sup>1</sup> Relates to costs incurred at regional business unit offices.

<sup>2</sup> In 2006, we paid amounts relating to new community programs in Peru and Tanzania.

### Environmental Remediation Costs

During the production phases of a mine, we incur and expense the cost of various activities connected with environmental aspects of normal operations, including compliance with and monitoring of environmental regulations; disposal of hazardous waste produced from normal operations; and operation of equipment designed to reduce or eliminate environmental effects. In limited circumstances, costs to acquire and install plant and equipment are capitalized during the production phase of a mine if the costs are expected to mitigate risk or prevent future environmental contamination from normal operations.

When a contingent loss arises from the improper use of an asset, a loss accrual is recorded if the loss is probable and reasonably estimable. Amounts recorded are measured on an undiscounted basis, and adjusted as further information develops or if circumstances change. Recoveries of environmental remediation costs from other parties are recorded as assets when receipt is deemed probable.

### Impairment of Long-lived Assets

| For the years ended Dec. 31                    | 2006  | 2005 | 2004   |
|--|-------|------|--------|
| Eskay Creek <sup>1</sup>                       | \$ —  | \$ — | \$ 58  |
| Peruvian exploration properties <sup>2,3</sup> | 17    | —    | 67     |
| Other  | —     | —    | 14     |
|  | \$ 17 | \$ — | \$ 139 |

<sup>1</sup> The asset group that comprises the Eskay Creek mine was tested for impairment effective December 31, 2004. The principal factors that caused us to test this asset group for impairment included: downward revisions to proven and probable reserves; the impact of the continued strengthening of the C\$ against the US\$ and upward revisions to expected asset retirement costs in the fourth quarter of 2004. An impairment charge of \$58 million was recorded, which represents the amount by which the carrying amount of the asset group exceeds its estimated fair value. Fair value was estimated using the method described in note 14C.

<sup>2</sup> In 2006, the carrying amount of Cuerpo Sur, an extension of Pierina, was tested for impairment on completion of the annual life of mine planning process. An impairment charge of \$17 million was recorded to reduce the carrying amount to the estimated fair value.

<sup>3</sup> At the end of 2004, upon completion of the exploration program for the year, we assessed the results and updated our future plans for various exploration properties in Peru that were originally acquired through the Arequipa acquisition in 1996. We concluded that the results and future potential did not merit any further investment for these properties. The assets were tested for impairment, and an impairment charge of \$67 million was recorded that reflects the amounts by which their carrying amounts exceed their estimated fair values. The fair value of this group of assets was judged to be minimal due to the unfavorable results of exploration work on the properties.

### C Other Income

| For the years ended Dec. 31                | 2006  | 2005  | 2004  |
|--|-------|-------|-------|
| Non-hedge derivative gains (note 19D)      | \$ —  | \$ 6  | \$ 5  |
| Gains on sale of assets <sup>1</sup>       | 9     | 5     | 36    |
| Gains on sale of investments (note 11)     | 6     | 17    | 6     |
| Gain on Kabanga transaction                | —     | 15    | —     |
| Gain on vend-in to Highland Gold (note 11) | 51    | —     | —     |
| Royalty income                             | 10    | 6     | 2     |
| Sale of water rights                       | 5     | —     | —     |
| Other                                      | 8     | —     | —     |
|  | \$ 89 | \$ 49 | \$ 49 |

<sup>1</sup> In 2006, we sold certain properties in Canada and Chile. In 2005, we sold some land positions in Australia. In 2004 we sold various mining properties, including the Holt-McDermott mine in Canada and certain land positions around our inactive mine sites in the United States.

### **Kabanga Transaction**

In April 2005, we entered into a joint venture agreement with Falconbridge Limited ("Falconbridge") with respect to the Kabanga nickel deposit and related concession in Tanzania. In 2006, Xstrata Plc ("Xstrata") acquired Falconbridge. Xstrata is the operator of the joint venture and the project is currently in the pre-feasibility study stage. Kabanga, which is one of the largest undeveloped nickel sulphide deposits in the world, is located in northwest Tanzania. The property is approximately 385 kilometers from Bulyanhulu and approximately 200 kilometers west of Tulawaka and is accessible by a paved/gravel road. In 2006, ongoing diamond drilling, exploration and other project development engineering activities being managed by Xstrata have been performed as part of a work plan to prepare an updated resource model and scoping study. Xstrata has recently completed the \$50 million work plan that was contemplated in the joint venture agreement. In 2007, Xstrata plans to prepare a pre-feasibility study. In accordance with the joint venture agreement, Xstrata has committed to spend an additional \$95 million, which will be used to fund the pre-feasibility study with funds remaining for other subsequent activities. After the \$95 million spent by Xstrata, funding will be shared equally by Barrick and Xstrata.

## D Other Expense

| For the years ended Dec. 31  | 2006  | 2005  | 2004  |
|--|-------|-------|-------|
| Changes in AROs at closed mines  | \$ 53 | \$ 15 | \$ 22 |
| Accretion expense at closed mines (note 20)  | 8     | 10    | 7     |
| Impairment charges on investments (note 11)  | 6     | 16    | 5     |
| Legal costs for major litigation   | —     | 8     | 5     |
| Placer Dome integration costs  | 12    | —     | —     |
| Corporate transaction costs  | 7     | —     | —     |
| Currency translation (gains) losses  | (2)   | (3)   | 1     |
| Pension and other post-retirement benefit expense (notes 26B and 26E) <sup>1</sup> | 3     | 8     | 2     |
| Other items  | 9     | 2     | 5     |
|  | \$ 96 | \$ 56 | \$ 47 |

<sup>1</sup> For the year ended December 31, 2006, \$4 million of pension credit that relates to active employees at producing mines is included in cost of sales (2005: \$nil), and \$2 million is included in corporate administration (2005: \$nil).

## 8 > INCOME TAX EXPENSE (RECOVERY)

| For the years ended Dec. 31                           | 2006     | 2005    | 2004     |
|---|----------|---------|----------|

| Canada  | \$ 13    | \$ (3)  | \$ 19    |
| International   | 444      | 93      | 24       |
|   | \$ 457   | \$ 90   | \$ 43    |
| Deferred  |          |         |          |
| Canada  | \$ (117) | \$ (15) | \$ (26)  |
| International   | 80       | 22      | 7        |
|   | \$ (37)  | \$ 7    | \$ (19)  |
| Income tax expense before elements below <sup>1</sup> | \$ 420   | \$ 97   | \$ 24    |
| Outcome of tax uncertainties                          | —        | —       | (141)    |
| Change in tax status in Australia                     | (31)     | (5)     | (81)     |
| Tax rate changes                                      | 12       | —       | —        |
| Release of beginning of year valuation allowances     | (53)     | (32)    | (5)      |
| Total expense (recovery)                              | \$ 348   | \$ 60   | \$ (203) |

<sup>1</sup> All amounts are deferred tax items except for a \$21 million portion of the \$141 million recovery on resolution of the Peruvian tax assessment in 2004, which is a current tax item.

### Outcome of Tax Uncertainties

#### Peruvian Tax Assessment

On September 30, 2004, the Tax Court of Peru issued a decision in our favor in the matter of our appeal of a 2002 income tax assessment of \$32 million, excluding interest and penalties. The 2002 income tax assessment related to a tax audit of our Pierina mine for the 1999 and 2000 fiscal years. The assessment mainly related to the validity of a revaluation of the Pierina mining concession, which affects its tax basis. Under the valuation proposed by the Peruvian tax agency, SUNAT, the tax basis of the Pierina mining concession would have changed from what we previously assumed with a resulting increase in current and deferred income taxes. The full life-of-mine effect on current and deferred income tax liabilities totaling \$141 million was fully recorded at December 31, 2002, as well as other related costs of about \$21 million (\$15 million post-tax).

In January 2005, we received confirmation in writing that there would be no appeal of the September 30, 2004 Tax Court of Peru decision. The confirmation concluded the administrative and judicial appeals process with resolution in Barrick's favor. In 2004, we recorded a \$141 million reduction in current and deferred income tax liabilities and a \$21 million reduction in other accrued costs in 2004, \$15 million of which was classified in cost of sales and \$6 million of which was classified in other (income) expense. Notwithstanding the favorable Tax Court decision we received in 2004 on the 1999 to 2000 revaluation matter, on audit, SUNAT has reassessed us on the same issue for 2001 to 2003. We believe that the audit reassessment has no merit, that we will prevail, and accordingly no provision has been booked for this reassessment.

#### Changes in Tax Status in Australia

A tax law was enacted in Australia in 2002 that allows wholly-owned groups of companies resident in Australia to elect to be treated as a single entity and to file consolidated tax returns. This regime is elective and the election is irrevocable. Under certain circumstances, the rules governing the election allow for a choice to reset the tax cost basis of certain assets within a consolidated group. Our election, which was effective for our 2004 fiscal year, resulted in an estimated upward revaluation of the tax basis of our assets in Australia, by \$110 million, with a corresponding \$33 million adjustment to deferred taxes. In 2005, based on additional facts and refinements, the adjustment was increased by \$5 million.

Also in 2004, we filed an election to use the US dollar as the functional currency for Australian tax calculations and tax returns, whereas previously the Australian dollar was used. Prior to this election, the favorable impact of changes in the tax basis of non-monetary assets caused by changes in the US\$:A\$ exchange rate were not recorded, as their realization was not certain. The election in 2004 created certainty about the realization of these favorable tax temporary differences and resulted in our recognition of these as deferred tax assets amounting to \$48 million. The impact of the change in tax status was to increase the amount of deductible temporary differences relating to non-monetary assets by \$48 million.

In first quarter 2006, an interpretative decision (ID) was issued by the Australia Tax Office that clarified the tax

treatment of currency gains and losses on foreign currency denominated liabilities. Under certain conditions, for taxpayers who have made the functional currency election, and in respect of debt that existed at the time the election was made, the ID provided clarification that unrealized foreign exchange gains that currently exist on intercompany debt will not crystallize upon repayment of the debt. The effect of the ID was recorded as a \$31 million increase to deferred tax assets.

### Tax Rate Changes

In second quarter 2006, a new federal rate change was enacted in Canada that lowered the applicable tax rate. The impact of this tax rate change was to reduce net deferred tax assets in Canada by \$34 million that was recorded as a component of deferred income tax expense. Also in second quarter 2006, on change of tax status of a Canadian subsidiary, we recorded a deferred income tax credit of \$22 million, to reflect the impact on the measurement of deferred income tax assets and liabilities.

### Release of Beginning of Year Valuation Allowances

In 2006, we released \$25 million of valuation allowances in the United States due to the estimated effect of higher market gold prices on the ability to utilize deferred tax assets. Also in 2006, we released \$9 million of valuation allowances in a Chilean entity due to the availability of income, and we released valuation allowances of \$19 million in Canada, reflecting utilization of capital losses.

In 2005, we released valuation allowances totaling \$31 million in Argentina relating to the effect of the higher gold price environment and the anticipated commencement of sales in 2006. We released valuation allowances of \$2 million in Canada reflecting utilization of capital losses. In 2004, we released valuation allowances totaling \$5 million relating to the consolidated tax return election in Australia.

### Reconciliation to Canadian Statutory Rate

| For the years ended Dec. 31                                 | 2006   | 2005   | 2004     |

| Impact of changes in tax status in Australia                | (31)   | (5)    | (81)     |
| Tax rate changes  | 12     | —      | —        |
| Valuation allowances set up against current year tax losses | 7      | 59     | 65       |
| Outcome of tax uncertainties                                | —      | —      | (141)    |
| Mining taxes  | 9      | 1      | 5        |
| Other items   | 7      | (2)    | 2        |
| Income tax expense (recovery)                               | \$ 348 | \$ 60  | \$ (203) |

<sup>1</sup> We are able to claim certain allowances and tax deductions unique to extractive industries that result in a lower effective tax rate.

<sup>2</sup> We operate in multiple foreign tax jurisdictions that have tax rates different than the Canadian statutory rate. Additionally, we have reinvested earnings and cash flow generated by the Zaldivar mine in Chile to fund a portion of the construction cost of Pascua-Lama. The reinvestment of these earnings and cash flow resulted in a lower tax rate applied for the period.

### Income Tax Returns

Our income tax returns for the major jurisdictions where we operate have been fully examined through the following years: Canada — 2001, United States — 2002, Peru — 2003 and Chile — 2003.

## 9 > EARNINGS PER SHARE

For the years ended Dec. 31  
(\$ millions, except shares in millions and per share amounts in dollars)

| Income from continuing operations                                     | \$ 1.44 | \$ 1.42  | \$0.74 | \$0.73  | \$0.47 | \$0.46  |
| Income before cumulative effect of changes in accounting principles   | \$ 1.79 | \$ 1.77  | \$0.74 | \$0.73  | \$0.47 | \$0.46  |
| Net income  | \$ 1.79 | \$ 1.77  | \$0.75 | \$0.75  | \$0.47 | \$0.46  |

### Accounting Policy

Earnings per share is computed by dividing net income available to common shareholders by the weighted average number of common shares outstanding for the period. Diluted earnings per share reflects the potential dilution that could occur if additional common shares are assumed to be issued under securities that entitle their holders to obtain common shares in the future. For stock options, the number of additional shares for inclusion in diluted earnings per share calculations is determined using the treasury stock method. Under this method, stock options, whose exercise price is less than the average market price of our common shares, are assumed to be exercised and the proceeds are used to repurchase common shares at the average market price for the period. The incremental number of common shares issued under stock options and repurchased from proceeds is included in the calculation of diluted earnings per share. For convertible debentures, the number of additional shares for inclusion in diluted earnings per share calculations is determined using the if converted method. The incremental number of common shares issued is included in the number of weighted average shares outstanding and interest on the convertible debentures is excluded from the calculation of income.

### B Non-Cash Investing and Financing Activities

#### Placer Dome Acquisition

We purchased all of the common shares of Placer Dome in 2006 for \$10,054 million (see note 3A). In conjunction with the acquisition, liabilities were assumed as follows:

|   |          |
|---|----------|
| Fair value of assets acquired, <sup>1</sup> | \$15,346 |
| Consideration paid                          | 10,054   |
| Liabilities assumed <sup>2</sup>            | \$ 4,830 |

<sup>1</sup> Includes cash of \$1,102 million.

<sup>2</sup> Includes debt obligations of \$1,252 million (note 19B).

#### Vend-in of Assets to Highland Gold ("Highland")

In 2006 we exchanged various interests in mineral properties for 34.3 million Highland shares with a value of \$95 million at the time of closing of the transaction (see note 11).

#### Sale of South Deep

In 2006 we sold the South Deep mine to Gold Fields Limited ("Gold Fields") for \$1,517 million. The proceeds included 18.7 million Gold Fields common shares with a value of \$288 million (see note 3B).

|                             | <b>\$ 245</b> | <b>\$ 31</b> | <b>\$ 7</b> |

### Accounting Policy for Available-for-Sale Securities

Available-for-sale securities are recorded at fair value with unrealized gains and losses recorded in other comprehensive income ("OCI"). Realized gains and losses are recorded in earnings when investments mature or on sale, calculated using the average cost of securities sold. If the fair value of an investment declines below its carrying amount, we undertake an assessment of whether the impairment is other-than-temporary. We consider all relevant facts and circumstances in this assessment, particularly: the length of time and extent to which fair value has been less than the carrying amount; the financial condition and near-term prospects of the investee, including any specific events that have impacted its fair value; both positive and negative evidence that the carrying amount is recoverable within a reasonable period of time; and our ability and intent to hold the investment for a reasonable period of time sufficient for an expected recovery of the fair value up to or beyond the carrying amount. We record in earnings any unrealized declines in fair value judged to be other than temporary.

### NovaGold Resources Inc. ("NovaGold")

In fourth quarter 2006, we acquired a 14.8% interest in NovaGold for cash consideration of \$218 million as part of a tender offer.

### Gold Fields Limited ("Gold Fields")

The investment in Gold Fields was acquired on December 1, 2006 as partial consideration for the sale of our interest in South Deep (note 3B). At acquisition, we recorded a liquidity discount of \$48 million to reflect a restriction on our ability to trade the shares for a period of 120 days from closing. As of December 31, 2006, the discount is approximately \$39 million for the remaining 90 days of the restriction period.

### Celtic Resources Holdings Inc. ("Celtic")

On January 5, 2005, we completed a subscription for 3,688,191 units of Celtic for a price of \$7.562 per unit for a total cost of \$30 million. Each unit consisted of one ordinary share of Celtic and one-half of one share purchase warrant. On June 1, 2005, the number of warrants held increased under the terms of the subscription agreement by 922,048 warrants to 2,766,143 warrants. Each whole warrant entitles us to acquire one ordinary share of Celtic for \$7.562, expiring on December 31, 2007. We allocated \$25 million to the ordinary shares and \$5 million to the share purchase warrants based on their relative fair values at acquisition. At December 31, 2006, we held a 9% (2005: 9%) combined direct and indirect interest in Celtic's outstanding common shares.

The investment in common shares is classified as an available-for-sale security. We concluded that the share purchase warrants are derivative instruments as defined by FAS 133. The warrants, which are classified as non-hedge derivatives, are recorded at their estimated fair value in the balance sheet with changes in fair value recorded in non-hedge derivative gains/losses. The fair value of the share purchase warrants was \$0.5 million at December 31, 2006 (2005: \$0.5 million). At the time of the initial subscription, Celtic granted us the right to acquire 50% of any interest in any mineral property in Kazakhstan that Celtic acquires in the future for a period of 12 months after any such acquisition for an amount equal to 50% of the cost to Celtic of its interest in the mineral property. No such rights have been exercised since the initial subscription.

## Gains (Losses) on Investments Recorded in Earnings

| For the years ended Dec. 31 | 2006  | 2005  | 2004 |
|-----------------------------|-------|-------|------|
| Gains realized on sales     | \$ 6  | \$ 17 | \$ 6 |
| Impairment charges          | (4)   | (16)  | (5)  |
|                             | \$ 2  | \$ 1  | \$ 1 |
| Cash proceeds from sales    | \$ 46 | \$ 10 | \$ 9 |

In the second half of 2005, the fair value of our investment in Celtic declined below cost and at the end of 2005 we concluded that the impairment was "other-than-temporary" and recorded a \$12 million impairment charge.

## Equity Method Investments

| At Dec 31            | 2006                    |                 | 2005                    |                 |
|----------------------|-------------------------|-----------------|-------------------------|-----------------|
|                      | Fair value <sup>1</sup> | Carrying amount | Fair value <sup>1</sup> | Carrying amount |
| Highland             | \$ 207                  | \$ 199          | \$ 134                  | \$ 131          |

| Atacama <sup>2</sup> | n/a                     | 123             | —                       | —               |
|                      |                         | \$ 327          |                         | \$ 138          |

<sup>1</sup> Based on the closing market stock price.

<sup>2</sup> As Atacama Copper Pty Limited is not a publicly traded company, there is no readily determinable fair value.

## Purchases of Equity Method Investment for Cash

| For the years ended Dec. 31 | 2006   | 2005  | 2004  |
|-----------------------------|--------|-------|-------|
| Highland                    | \$ —   | \$ 50 | \$ 40 |
| Diamondex                   | 2      | 8     | —     |
| Atacama                     | 123    | —     | —     |
|                             | \$ 125 | \$ 58 | \$ 40 |

## Accounting Policy for Equity Method Investments

Under the equity method, we record our equity share of the income or loss of equity investees each period. On acquisition of an equity investment, the underlying identifiable assets and liabilities of an equity investee are recorded at fair value and the income or loss of equity investees is based on these fair values. If the cost of any equity investment exceeds the total amount of the fair value of identifiable assets and liabilities, any excess is accounted for in a manner similar to goodwill, with the exception that an annual goodwill impairment test is not required. The carrying amount of each investment in an equity investee is evaluated for impairment using the same method as an available-for-sale security.

## Highland Gold Mining Ltd. ("Highland")

Our 34% interest in Highland was acquired in four tranches: 11.1 million common shares for cash of \$46 million in 2003; 9.3 million common shares for cash of \$40 million in 2004; 11 million common shares in 2005 for cash of \$50 million; and 34.3 million shares as part of a vend-in transaction in 2006.

On November 17, 2006, we entered into an agreement with Highland to transfer ownership of certain companies holding Russian and Kyrgyz licenses in return for 34.3 million Highland common shares increasing our ownership of Highland from 20% to 34%. In effect, we are contributing our 50% interest in the Taseevskoye deposit, as well as other exploration properties in Russia and Central Asia, to Highland, thereby consolidating ownership of these properties under one company. As part of the transaction, we seconded several of our employees to Highland, and will receive two additional Board seats. Completion of the transaction occurred on December 15, 2006. On closing, the fair value of Highland common shares exceeded the carrying amount of assets exchanged by \$76 million. We recorded this difference as a gain of \$51 million in other income/expense to the extent of the ownership in Highland held by independent third parties, and the balance of \$25 million as a reduction in the carrying amount of our investment in Highland. The Fedorova PGM deposit was not included in this transaction.

The difference between the cost of our investment in Highland and the underlying historic cost of net assets was \$111 million at June 30, 2006. The difference between the cost of our investment and the underlying fair value of assets and liabilities essentially represents an asset similar to goodwill.

On September 7, 2006 a fire occurred in the underground part of the Central Shaft at Highland's Darasun mine ("Darasun"). Highland's management is evaluating the amount of damage and the possibility of asset impairment, if any, at Darasun. Valuations and engineering studies are in progress, but were not complete at the date of issuance of these financial statements. On finalization of these valuations and studies, it is reasonably possible that an impairment charge may be recorded by Highland which would impact the equity investment in our financial statements.

**Diamondex Resources Limited (“Diamondex”)**

We completed a subscription for 11,111,111 units of Diamondex for cash of \$8 million in 2005. Each unit consists of one ordinary share of Diamondex and one share purchase warrant. We allocated the cost as follows: \$7 million to the ordinary shares and \$1 million to the share purchase warrants.

We completed a subscription for a further 3,358,300 units of Diamondex for cash of \$2 million in 2006. Each unit consists of one ordinary share of Diamondex and

one-half share purchase warrant. As of December 31, 2006, we have 14,469,411 common shares and 12,790,261 share purchase warrants. We hold a 15% interest in the outstanding common shares of Diamondex (28% assuming exercise of the share purchase warrants). We record our equity share of the income or loss of Diamondex each period based on our total 15% interest in outstanding common shares. At December 31, 2006, we determined that our investment in Diamondex was "other than temporarily" impaired by \$2 million, due to a sustained decline in fair value of the common shares relative to their carrying amount.

### Atacama Copper Pty Limited ("Atacama")

In September 2006, in connection with the previously announced agreement with Antofagasta plc ("Antofagasta") to acquire 50% of Tethyan Copper Company's ("Tethyan") Reko Diq project and associated mineral interests, we acquired a 50% interest in Atacama Copper Pty Limited ("Atacama"), a company incorporated under the laws of Australia. We paid cash of \$93 million for 50% of the issued and outstanding share capital. The difference between the amount paid and underlying equity in net assets was \$93 million. This difference represents the incremental fair value of the Reko Diq project and is not being amortized while the project is in the development stage. In November 2006, we paid approximately \$30 million for our 50% share of the costs to terminate BHP Billiton's interest in certain Tethyan mineral interests. In return, we received additional shares in proportion to our ownership interest, such that our 50% interest in Atacama is retained.

We determined that Atacama is a variable interest entity and consequently we have used the principles of FIN 46R to determine how to account for our ownership interest. We concluded that neither ourselves nor Antofagasta are a primary beneficiary and consequently we evaluated whether either ourselves or Antofagasta have the right to control Atacama under the joint venture agreement. We determined that we share joint control with Antofagasta, so because Atacama is a corporate joint-venture we use the equity method of accounting for our investment in Atacama. Our maximum exposure to loss in this entity is limited to our investment in Atacama, which totaled \$123 million as of December 31, 2006, and amounts we are committed to fund Atacama's interim exploration program. The cost of our investment in Atacama at acquisition approximated the underlying fair value of tangible net assets.

### Accounting Policy for Inventory

Material extracted from our mines is classified as either ore or waste. Ore represents material that we expect can be processed into a saleable form, and sold at a profit. Ore is recorded as an asset that is classified within inventory at the point it is extracted from the mine. Ore is accumulated in stockpiles that are subsequently processed into gold/copper in a saleable form under a mine plan that takes into consideration optimal scheduling of production of our reserves, present plant capacity, and the market price of gold/copper. Gold/copper in process represents gold/copper in the processing circuit that has not completed the production process, and is not yet in a saleable form.

Gold ore stockpiles are measured by estimating the number of tons added and removed from the stockpile, the number of contained ounces (based on assay data) and the estimated metallurgical recovery rates (based on the expected processing method). Copper ore stockpiles are measured estimating the number of tons added and removed from the stockpile. Stockpile ore tonnages are verified by periodic surveys. Costs are allocated to a stockpile based on relative values of material stockpiled and processed using current mining costs incurred up to the point of stockpiling the ore, including applicable overhead, depreciation, depletion and amortization relating to mining operations, and removed at each stockpile's average cost per recoverable unit.

We record gold in process, gold dore and gold in concentrate form at average cost, less provisions required to reduce inventory to market value. Average cost is calculated based on the cost of inventory at the beginning of a period, plus the cost of inventory

produced in a period. Costs capitalized to inventory include direct and indirect materials and consumables; direct labor; repairs and maintenance; utilities; amortization of property, plant and equipment; waste stripping costs; and local mine administrative expenses. Costs are removed from inventory and recorded in cost of sales and amortization expense based on the average cost per ounce of gold in inventory. Mine operating supplies are recorded at purchase cost.

Each quarter, we record provisions to reduce inventory to net realizable value, to reflect changes in economic factors that impact inventory value or to reflect present intentions for the use of slow moving and obsolete supplies inventory.

| For the years ended Dec. 31  | 2006  | 2005  | 2004 |
|------------------------------|-------|-------|------|
| Inventory impairment charges | \$ 28 | \$ 15 | \$ 9 |

### Heap Leach Inventory

The recovery of gold and copper from certain oxide ores is achieved through the heap leaching process. Our Pierina, Lagunas Norte, Veladero, Cortez, Bald Mountain, Round Mountain and Marigold mines all use a heap leaching process for gold and our Zaldívar mine uses a heap leaching process for copper. Under this method, ore is placed on leach pads where it is treated with a chemical solution, which dissolves the gold or copper contained in the ore. The resulting "pregnant" solution is further processed in a plant where the gold or copper is recovered. For accounting purposes, costs are added to ore on leach pads based on current mining and leaching costs, including applicable depreciation, depletion and amortization relating to mining operations. Costs are removed from ore on leach pads as ounces or pounds are recovered based on the average cost per recoverable ounce of gold or pound of copper on the leach pad.

Estimates of recoverable gold or copper on the leach pads are calculated from the quantities of ore placed on the leach pads (measured tons added to the leach pads), the grade of ore placed on the leach pads (based on assay data) and a recovery percentage (based on ore type). In general, leach pads recover between 35% and 95% of the ounces or pounds placed on the pads.

Although the quantities of recoverable gold or copper placed on the leach pads are reconciled by comparing the grades of ore placed on pads to the quantities of gold or copper actually recovered (metallurgical balancing), the nature of the leaching process inherently limits the ability to precisely monitor inventory levels. As a result, the metallurgical balancing process is constantly monitored and estimates are refined based on actual results over time. Historically, our operating results have not been materially impacted by variations between the estimated and actual recoverable quantities of gold or copper on our leach pads. At December 31, 2006, the weighted average cost per recoverable ounce of gold and recoverable pound of copper on leach pads was \$180 per ounce and \$0.45 per pound, respectively (2005: \$134 per ounce of gold). Variations between actual and estimated quantities resulting from changes in assumptions and estimates that do not result in write-downs to net realizable value are accounted for on a prospective basis.

The ultimate recovery of gold or copper from a leach pad will not be known until the leaching process is concluded. Based on current mine plans, we expect to place the last ton of ore on our current leach pads at dates for gold ranging from 2009 to 2021 and for copper ranging from 2022 to 2027. Including the estimated time required for residual leaching, rinsing and reclamation activities, we expect that our leaching operations will terminate within a period of up to six years following the date that the last ton of ore is placed on the leach pad.

The current portion of ore inventory on leach pads is determined based on estimates of the quantities of gold or copper at each balance sheet date that we expect to recover during the next 12 months.

### Ore in Stockpiles

| At Dec. 31                    | 2006   | 2005   |
|-------------------------------|--------|--------|
| <b>Gold</b>                   |        |        |
| Goldstrike                    |        |        |
| Ore that requires roasting    | \$ 239 | \$ 182 |
| Ore that requires autoclaving | 84     | 98     |
| Kalgoorlie                    | 58     | 53     |
| Turquoise Ridge               | 14     | —      |
| Porgera                       | 17     | —      |
| Other                         | 73     | 27     |
| <b>Copper</b>                 |        |        |
| Zaldívar                      | 51     | —      |
|                               | \$ 536 | \$ 360 |

At Goldstrike, we expect to fully process the autoclave stockpile by 2008 and the roaster stockpile by 2023. At Kalgoorlie, we expect to fully process the stockpile by 2017. At Zaldívar we expect to fully process the stockpile by 2027.

|  | <b>\$ 1,621</b>                     |

#### Acquisitions

We capitalize the cost of acquisition of land and mineral rights. On acquiring a mineral property, we estimate the fair value of proven and probable reserves as well as the value beyond proven and probable reserves and we record these amounts as assets at the date of acquisition. At the time mineralized material is converted into proven and probable reserves, we classify the capitalized acquisition cost associated with those reserves as a component of acquired mineral properties, which are subject to amortization. When production begins, capitalized acquisition costs that are subject to amortization are amortized to operations using the units-of-production method.

#### Development Stage Projects

We capitalize development costs incurred at development projects that meet the definition of an asset after mineralization is classified as proven and probable gold reserves (as defined by United States reporting standards). Before classifying mineralization as proven and probable reserves, development costs incurred at development projects are considered project development expenses that are expensed as incurred. Development costs include: drilling, engineering studies, metallurgical test, permitting and sample mining. At new mines, the cost of start-up activities such as recruiting and training is expensed as incurred.

### *Interest Costs*

Interest cost is considered an element of the historical cost of an asset when a period of time is necessary to prepare it for its intended use. We capitalize interest costs to assets under development or construction while activities are in progress. We also capitalize interest costs on the value assigned to projects acquired from third parties if activities that are necessary to get the asset ready for its intended use are underway. This may be before the mineralization is classified as proven and probable reserves (as defined by United States reporting standards).

In 2006, amortization of property plant and equipment began at our Cowal mine after it moved from construction into the production phase. In 2005, amortization of property, plant and equipment at our Tulawaka, Lagunas Norte, and Veladero mines began after the mines moved from construction into the production phase. Amortization also began in 2005 at the Western 102 power plant in Nevada that was built to supply power for the Goldstrike mine as it moved from construction into the production phase.

## **B Amortized Assets**

### *Capitalized Mineral Property Acquisition and Mine Development Costs*

We start amortizing capitalized mineral property acquisition and mine development costs when production begins. Amortization is calculated using the "units-of-production" method, where the numerator is the number of ounces produced and the denominator is the estimated recoverable ounces of gold contained in proven and probable reserves.

During production at underground mines, we incur development costs to build new shafts, drifts and ramps that will enable us to physically access ore underground. The time over which we will continue to incur these costs depends on the mine life, and in some cases could be up to 25 years. These underground development costs are capitalized as incurred. Costs incurred and capitalized to enable access to specific ore blocks or areas of the mine, and which only provide an economic benefit over the period of mining that ore block or area, are attributed to earnings using the units-of-production method where the denominator is estimated recoverable ounces of gold contained in proven and probable reserves within that ore block or area. If capitalized underground development costs provide an economic benefit over the entire mine life, the costs are attributed to earnings using the units-of-production method, where the denominator is the estimated recoverable ounces of gold contained in total accessible proven and probable reserves.

### *Buildings, Plant and Equipment*

We record buildings, plant and equipment at cost. We capitalize costs that extend the productive capacity or useful economic life of an asset. Costs incurred that do not extend the productive capacity or useful economic life of an asset are considered repairs and maintenance and expensed as incurred. We amortize the capitalized cost of assets less any estimated residual value, using the straight-line method over the estimated useful economic life of the asset based on their expected use in our business. The longest estimated useful economic life for buildings and equipment at ore processing facilities is 25 years and for mining equipment is 15 years.

In the normal course of our business, we have entered into certain leasing arrangements whose conditions meet the criteria for the leases to be classified as capital leases. For capital leases, we record an asset and an obligation at an amount equal to the present value at the beginning of the lease term of minimum lease payments over the lease term. In the case of our capital leasing arrangements, there is transfer of ownership of the leased assets to us at the end of the lease term and therefore we amortize these assets on a basis consistent with our other owned assets.

## **C Impairment Evaluations**

### *Producing Mines and Development Projects*

We review and test the carrying amounts of assets when events or changes in circumstances suggest that the carrying amount may not be recoverable. We group assets at the lowest level for which identifiable cash flows are largely independent of the cash flows of other assets and liabilities. For operating mines and development projects, all assets are included in one group. If there are indications that an impairment may have occurred, we prepare estimates of expected future cash flows for each group of assets. Expected future cash flows are based on a probability-weighted approach applied to potential outcomes.

Estimates of expected future cash flow reflect:

- Estimated sales proceeds from the production and sale of recoverable ounces of gold/copper contained in proven and probable reserves;
- Expected future commodity prices and currency exchange rates (considering historical and current prices, price trends and related factors);
- Expected future operating costs and capital expenditures to produce proven and probable gold/copper reserves based on mine plans that assume current plant capacity, and exclude the impact of inflation;
- Expected cash flows associated with value beyond proven and probable reserves, which includes the expected cash outflows required to develop and extract the value beyond proven and probable reserves; and
- Environmental remediation costs excluded from the measurement of asset retirement obligations.

We record a reduction of a group of assets to fair value as a charge to earnings if expected undiscounted future cash flows are less than the carrying amount. We estimate fair value by discounting the expected future cash flows using a discount factor that reflects the risk-free rate of interest for a term consistent with the period of expected cash flows.

### *Exploration Projects*

After acquisition, various factors can affect the recoverability of the capitalized cost of land and mineral rights, particularly the results of exploration drilling. The length of time between the acquisition of land and mineral rights and when we undertake exploration work varies based on the prioritization of our exploration projects and the size of our exploration budget. If we conclude that the carrying amount of land and mineral

rights is impaired, we reduce this carrying amount to estimated fair value through an impairment charge.

## D Capital Commitments

In addition to entering into various operational commitments in the normal course of business, we had commitments of approximately \$117 million at December 31, 2006 for construction activities at our development projects.

## E Insurance

We purchase insurance coverage for certain insurable losses, subject to varying deductibles, at our mineral properties including losses such as property damage and business interruption. We record losses relating to insurable events as they occur. Proceeds receivable from insurance coverage are recorded at such time as receipt is probable and the amount receivable is fixed or determinable. Proceeds from insurance claims totaled \$12 million in 2006 (2005: \$nil, 2004: \$nil).

## 15 > INTANGIBLE ASSETS

| For the years ended Dec. 31    | 2006                  |                          | 2005                  |                          |
|--------------------------------|-----------------------|--------------------------|-----------------------|--------------------------|
|                                | Gross carrying amount | Accumulated amortization | Gross carrying amount | Accumulated amortization |
| Water rights                   | \$ 28                 | \$ —                     | \$ —                  | \$ —                     |
| Technology <sup>3</sup>        | 17                    | —                        | —                     | —                        |
| Supply contracts <sup>1</sup>  | 23                    | 9                        | —                     | —                        |
| Royalties <sup>2</sup>         | 17                    | 1                        | —                     | —                        |
|                                | \$ 85                 | \$ 10                    | \$ —                  | \$ —                     |
| Aggregate amortization expense | \$ —                  | \$ 10                    | \$ —                  | \$ —                     |

| For the years ended Dec. 31              | 2007 | 2008 | 2009 | 2010 | 2011 |
|--|------|------|------|------|------|
| Estimated aggregate amortization expense | \$ 7 | \$ 5 | \$ 3 | \$ 1 | \$ 1 |

<sup>1</sup> Supply contracts are being amortized over the weighted average contract lives of 4-8 years, with no assumed residual value.

<sup>2</sup> Royalties are being amortized using the units of production method over the total ounces subject to royalty payments under the agreement.

<sup>3</sup> The acquired technology will be used at the Pueblo Viejo project, which has been estimated to start up at a date later than 2010. The amount will be amortized using the units-of- production method over the estimated proven and probable reserves of the mine, with no assumed residual value.

## 16 > GOODWILL

|                  |          |
|------------------|----------|
| At Jan. 1, 2006  | \$ —     |
| Additions        | 6,506    |
| Disposals        | 651      |
| At Dec. 31, 2006 | \$ 5,855 |

We allocate goodwill arising from business combinations to reporting units acquired by preparing estimates of the fair value of the entire reporting unit and comparing this amount to the fair value of assets and liabilities (including intangibles) in the reporting unit. The difference represents the amount of goodwill allocated to each reporting unit.

We test goodwill for impairment annually in the fourth quarter of our fiscal year. This impairment assessment involves estimating the fair value of each reporting unit that includes goodwill. We compare this fair value to the total carrying amount of each reporting unit (including goodwill). If the carrying amount exceeds this fair value, then we estimate the fair values of all identifiable assets and liabilities in the reporting unit, and compare this net fair value of assets less liabilities to the estimated fair value of the entire reporting unit. The difference represents the fair value of goodwill, and if necessary, we reduce the carrying amount of goodwill to this fair value.

Circumstances that could trigger an impairment of goodwill include: a significant adverse change in the business climate or legal factors; an adverse action or assessment by a regulator; unanticipated competition; the loss of key personnel; change in reportable segments; the likelihood that a reporting unit or significant portion of a reporting unit will be sold or otherwise disposed of; the results of testing for recoverability of a significant asset group within a reporting unit; and the recognition of a goodwill impairment loss in the financial statements of a subsidiary that is a component of a reporting unit. Measurement of the fair value of a reporting unit is based on one or more fair value measures including present value techniques of estimated future cash flows and estimated amounts at which the unit as a whole could be bought or sold in a current transaction between willing parties. We also consider comparable market capitalization rates for each reporting unit as of the date of the impairment test.

Goodwill arising on the acquisition of Placer Dome was \$6,506 million. In 2006 we determined that goodwill should be allocated to reporting units that would either represent individual mineral properties, or aggregations of mineral properties, limited to aggregation at a regional business unit level. Determination of appropriate reporting units is ongoing and consequently the allocation of goodwill to reporting units was not completed at December 31, 2006. In fourth quarter 2006 we completed impairment tests of goodwill assuming both no aggregation of mineral properties into reporting units, and aggregation of mineral properties up to the regional business unit level. On completion of these impairment tests we concluded that no impairment of goodwill had occurred by December 31, 2006. On the disposal of the South Deep mine in December 2006, we concluded that goodwill totaling \$651 million should be attributed to the operation and reflected in the calculation of the gain on sale.

## 17 > OTHER ASSETS

| At Dec. 31                                   | 2006            | 2005          |

### Debt Issue Costs

Additions to debt issue costs in 2006 of \$11 million principally relate to new debt financings put in place during the year. Amortization of debt issue costs is calculated using the interest method over the term of each debt obligation, and classified as a component of interest cost (see note 19B).

## 19 > FINANCIAL INSTRUMENTS

Financial instruments include cash; evidence of ownership in an entity; or a contract that imposes an obligation on one party and conveys a right to a second entity to deliver/receive cash or another financial instrument. Information on certain types of financial instruments is included elsewhere in these financial statements as follows: accounts receivable — note 13; investments — note 11; restricted share units — note 25B.

### A Cash and Equivalents

Cash and equivalents include cash, term deposits, commercial paper and treasury bills with original maturities of less than 90 days. Cash and equivalents include \$605 million held in Argentinean and Chilean subsidiaries that have been designated for use in funding construction costs at our Pascua-Lama development project.

- The 7% debentures have a principal amount of \$500 million and mature on May 1, 2007. The debentures have been designated in a fair value hedge relationship and consequently the carrying amount represents the estimated fair value.
- The debt has an aggregate principal amount of \$1,024 million, of which \$163 million is subject to floating interest rates and \$861 million is subject to fixed interest rates ranging from 6.37% to 8.05%. The notes mature at various times between 2007 and 2035.
- We have a credit and guarantee agreement with a group of banks (the "Lenders"), which requires the Lenders to make available to us a credit facility of up to \$1.5 billion or the equivalent amount in Canadian currency. The credit facility, which is unsecured, has an interest rate of Libor plus 0.25% to 0.35% on drawn down amounts, and a commitment rate of 0.07% to 0.08% on undrawn amounts. We increased the limit of this facility from \$1 billion in August 2006. The facility currently matures in 2011.
- During third quarter 2006, we terminated a second credit facility which consisted of unused bank lines of credit of \$850 million with an international consortium of banks.
- Amortization of debt discount/premium.
- The agreements which govern our long-term debt each contain various provisions which are not summarized herein. In certain cases, these provisions allow Barrick to, at its option, redeem indebtedness prior to maturity at specified prices and also may permit redemption of debt by Barrick upon the occurrence of certain specified changes in tax legislation.

### Series B Preferred Securities

On December 18, 2006, we redeemed all of the outstanding 8.5% Series B Preferred Securities due December 31, 2045 for cash at a redemption price of \$1,039.43 per \$1,000 aggregate principal amount, for total cash of \$80 million. The redemption price was comprised of the outstanding principal amount of \$77 million plus accrued and unpaid interest to December 17, 2006 of \$3 million.

### Senior Convertible Debentures

The convertible senior debentures (the "Securities") mature in 2023 and had an aggregate principal amount of \$230 million outstanding as at the end of 2006. Holders of the Securities may, upon the occurrence of certain circumstances and within specified time periods, convert their Securities into common shares of Barrick. These circumstances are: if the closing price of our common shares exceeds 120% of the conversion price

for at least 20 trading days in the 30 consecutive trading days ending on the last trading day of the immediately preceding fiscal quarter; if certain credit ratings assigned to the Securities fall below specified levels or if the Securities cease to be rated by specified rating agencies or such ratings are suspended or withdrawn; if for each of five consecutive trading days, the trading price per \$1,000 principal amount of the Securities was less than 98% of the product of the closing price of our common shares and the then current conversion rate; if the Securities have been called for redemption provided that only such Securities called for redemption may be converted and upon the occurrence of specified corporate transactions. On December 31, 2006 the conversion rate per each \$1,000 principal amount of Securities was 39.75 common shares and the effective conversion price was \$25.16 per common share. The conversion rate is subject to adjustment in certain

circumstances. As such, the effective conversion price may also change.

No circumstance permitting conversion was in existence on December 31, 2006. However, if such a circumstance had existed and all the Securities were converted, and settlement occurred on December 31, 2006, we would have issued 9.14 million common shares with an aggregate fair value of \$281 million based on our closing share price on December 31, 2006.

We may redeem the Securities at any time on or after October 20, 2010 and prior to maturity, in whole or in part, at a prescribed redemption price that varies depending upon the date of redemption from 100.825% to 100% of the principal amount, plus accrued and unpaid interest. The maximum amount we could be required to pay to redeem the securities is \$232 million plus accrued interest. Holders of the Securities can require the repurchase of the Securities for 100% of their principal amount, plus accrued and unpaid interest, on October 15, 2013 and October 15, 2018. In addition, if specified designated events occur prior to maturity of the Securities, we will be required to offer to purchase all outstanding Securities at a repurchase price equal to 100% of the principal amount, plus accrued and unpaid interest. For accounting purposes the Securities are classified as a "conventional convertible debenture" and the conversion feature has not been bifurcated from the host instrument.

### **Demand Financing Facility**

We have a demand financing facility that permits borrowings of up to \$150 million. The terms of the facility require us to maintain cash on deposit with the lender as a compensating balance equal to the amount outstanding under the facility, which is restricted as to use. The net effective interest rate is 0.4% per annum. At December 31, 2006, \$150 million had been drawn on the facility and an equal amount had been placed on deposit that is included in restricted cash (see note 13).

### **Copper-Link Notes/US Dollar Notes**

In October 2006, we issued \$1,000 million of Copper-Linked Notes. During the first three years, the full \$1,000 million obligation of these notes is to be repaid through the delivery of (the US dollar equivalent of) 324 million pounds of copper. At December 31, 2006, 285 million pounds of copper remained (2007 -129 million pounds, 2008 -103 million pounds, 2009 - 53 million pounds). Coincident with the repayment of (the US dollar equivalent of) 324 million pounds of copper, we will reborrow \$1,000 million. Over the next three years, the total amount outstanding under these notes will be \$1,000 million, with a portion repayable in a copper-linked equivalent and a portion repayable in a fixed amount of US dollars at the maturity of the notes (2016 and 2036). As the copper-linked equivalent is repaid, the fixed US dollar obligation will increase. After 2009, only the fixed US dollar obligation will remain. The accounting principles applicable to these Copper-Linked Notes require separate accounting for the future delivery of copper (a fixed-price forward sales contract that meets the definition of a derivative that must be separately accounted for) and for the underlying bond (see note 19D).

### **5.80%/4.875% Notes**

On November 12, 2004, we issued \$400 million of debentures at a \$3 million discount that mature on November 15, 2034 and \$350 million of debentures at a \$2 million discount that mature on November 15, 2014.

### **Veladero Financing**

One of our wholly owned subsidiaries, Minera Argentina Gold S.A. in Argentina has a limited recourse amortizing loan facility for \$250 million, the majority of which has a variable interest rate. We have guaranteed the loan until completion occurs, after which it will become non-recourse to the parent company. As at December 31, 2006, completion as defined in the loan agreement has not occurred. The loan is insured for political risks by branches of the Canadian and German governments.

## C Use of Derivative Instruments (“Derivatives”) in Risk Management

In the normal course of business, our assets, liabilities and forecasted transactions are impacted by various market risks including:

| Item  | Impacted by   |
|---|---|
| <ul style="list-style-type: none"><li>• Sales</li><li>• Cost of sales<ul style="list-style-type: none"><li>• Consumption of diesel fuel and propane</li><li>• Local currency denominated expenditures</li></ul></li><li>• Administration, exploration and business development costs in local currencies</li><li>• Capital expenditures in local currencies</li><li>• Interest earned on cash</li><li>• Fair value of fixed-rate debt</li></ul> | <ul style="list-style-type: none"><li>• Prices of gold and copper</li><br/><li>• Prices of diesel fuel, propane and natural gas</li><li>• Currency exchange rates - US dollar versus A\$ and C\$</li><li>• Currency exchange rates - US dollar versus A\$, C\$, and ZAR</li><br/><li>• Currency exchange rates - US dollar versus A\$ and C\$</li><li>• US dollar interest rates</li><li>• US dollar interest rates</li></ul> |

Under our risk management policy, we seek to mitigate the impact of these market risks to provide certainty for a portion of our revenues and to control costs and enable us to plan our business with greater certainty. The timeframe and manner in which we manage these risks varies for each item based upon our assessment of the risk and available alternatives for mitigating risk. For these particular risks, we believe that derivatives are an effective means of managing risk.

The primary objective of the hedging elements of our derivative positions is that changes in the values of hedged items are offset by changes in the values of derivatives. Most of the derivatives we use meet the FAS 133 hedge effectiveness criteria and are designated in a hedge accounting relationship. Some of the derivative positions are effective in achieving our risk management objectives but they do not meet the strict FAS 133 hedge effectiveness criteria, and they are classified as “non-hedge derivatives”.

Our use of derivatives is based on established practices and parameters, which are subject to the oversight of the Finance Committee of the Board of Directors. A compliance function independent of the Corporate Treasury Group monitors derivative transactions and has responsibility for recording and accounting for derivatives.

### Accounting Policy for Derivatives

We record derivatives on the balance sheet at fair value except for gold and silver sales contracts, which are excluded from the scope of FAS 133, because the obligations will be met by physical delivery of our gold and silver production and they meet the other requirements set out in paragraph 10(b) of FAS 133. In addition, our past sales practices, productive capacity and delivery intentions are consistent with the definition of a normal sales contract. Accordingly, we have elected to designate our gold and silver sales contracts as “normal sales contracts” with the result that the principles of FAS 133 are not applied to them. Instead we apply revenue recognition accounting principles as described in note 5.

On the date we enter into a derivative that is accounted for under FAS 133, we designate it as either a hedging instrument or a non-hedge derivative. A hedging instrument is designated in either:

> a fair value hedge relationship with a recognized asset or liability; or

> a cash flow hedge relationship with either a forecasted transaction or the variable future cash flows arising from a recognized asset or liability.

At the inception of a hedge, we formally document all relationships between hedging instruments and hedged items, including the related risk-management strategy. This documentation includes linking all hedging instruments to either: specific assets and liabilities, specific forecasted transactions or variable future cash flows. It also includes the method of assessing retrospective and prospective hedge effectiveness. In cases where we use regression analysis to assess prospective effectiveness, we consider regression outputs for the coefficient of determination (R-squared), the slope coefficient and the t-statistic to assess whether a hedge is expected to be highly effective. Each period, using a dollar offset approach, we retrospectively assess whether hedging instruments have been highly effective in offsetting changes in the fair value of hedged items and we measure the amount of any hedge ineffectiveness. We also assess each period whether hedging instruments are expected to be highly effective in the future. If a hedging instrument is not expected to be highly effective, we stop hedge accounting prospectively. In this case accumulated gains or losses remain in until the hedged item affects earnings. We also stop hedge accounting prospectively if:

> a derivative is settled;

> it is no longer highly probable that a forecasted transaction will occur; or

> we de-designate a hedging relationship.

If we conclude that it is probable that a forecasted transaction will not occur in the originally specified time frame, or within a further two-month period, gains and losses accumulated in OCI are immediately transferred to earnings. In all situations when hedge accounting

stops, a derivative is classified as a non-hedge derivative prospectively. Cash flows from derivatives accounted for in designated hedging relationships are classified in the same category as the cash flows from the item being hedged. Cash flows resulting from derivatives not designated in hedging relationships are recorded as operating cash flows. If a derivative has a negative fair value at inception, the resulting cash flows are recorded as financing activities.

Changes in the fair value of derivatives each period are recorded as follows:

- > Fair value hedges: recorded in earnings as well as changes in fair value of the hedged item.
- > Cash flow hedges: recorded in OCI until earnings are affected by the hedged item, except for any hedge ineffectiveness which is recorded in earnings immediately.
- > Non-hedge derivatives: recorded in earnings.

#### **D Derivative Instruments (“Derivatives”) Placer Dome Acquisition**

Through the acquisition of Placer Dome in first quarter 2006 we assumed the following derivative positions:

|  | Notional<br>amount | Fair value at<br>Jan. 20, 2006 |
|--|--------------------|--------------------------------|
| Gold sold forward contracts (millions of ounces)   | 7.0                | \$ (1,544)                     |
| Gold bought forward contracts (millions of ounces) | 0.3                | 14                             |
| Gold options (millions of ounces)                  | 1.0                | (188)                          |
| Silver contracts (millions of ounces)              | 6.5                | (11)                           |
| A\$ currency contracts (A\$ millions)              | 133                | 22                             |
|  |                    | \$ (1,707)                     |

Gold sold forward contracts were designated as cash flow hedges at the date of acquisition. The acquired Placer gold cash flow hedge position was eliminated in 2006. Approximately 6.2 million ounces of the acquired Placer Dome positions received hedge accounting treatment for the period from the date of acquisition to the date they were eliminated, and under which they had a designated date and price against specific future gold sales.

Gold sold forward contracts acquired through the Placer Dome acquisition were designated in first quarter 2006 against forecasted gold sales as a hedge of the variability in market prices on future sales. Hedged items are identified as the first stated quantity of ounces of forecasted sales in a future month. Prospective and retrospective hedge effectiveness is assessed with a dollar offset method using intrinsic values. The effective portion of changes in fair value of the gold contracts is recorded in OCI until the forecasted gold sale impacts earnings. Upon settlement of the contracts during 2006, hedge accounting was terminated and the accumulated gain/loss will remain in OCI until the forecasted transactions to which these contracts were designated occurs and impacts earnings.

## Summary of Derivatives at Dec. 31, 2006 <sup>1</sup>

|  | Notional Amount by Term to Maturity |              |              |           | Accounting Classification by Notional Amount |                  |           | Fair value |  |  |

<sup>1</sup> Excludes gold sales contracts (see note 5), gold lease rate swaps (see note 5), Celtic Resources & Midway Gold share purchase warrants (see note 11).

<sup>2</sup> C\$23 million of non-hedge currency contracts were economically closed out by entering into offsetting positions, albeit with differing counterparties.

### US Dollar Interest Rate Contracts

#### Fair Value Hedges

Receive-fixed swaps totaling \$500 million have been designated against the 7 1/2% debentures as a hedge of the variability in the fair value of the debentures caused by changes in Libor. We have concluded that the hedges are 100% effective under FAS 133, because the critical terms (including: notional amount, maturity date, interest payment and underlying interest rate — i.e. Libor) of the swaps and the debentures are the same. Changes in fair value of the swaps, together with an equal corresponding change in fair value of the debentures, caused by changes in Libor, are recorded in earnings each period. Also, as interest payments on the debentures are recorded in earnings, an amount equal to the difference between the fixed-rate interest received under the swap less the variable-rate interest paid under the swap is recorded in earnings as a component of interest costs.

#### Non-hedge Contracts

We use gold lease rate swaps as described in note 5. The valuation of gold lease rate swaps is impacted by market US dollar interest rates. Our non-hedge pay-fixed swap position mitigates the impact of changes in US dollar interest rates on the valuation of gold lease rate swaps.

## Currency Contracts

### *Cash Flow Hedges*

Currency contracts totaling C\$586 million, A\$2,863 million, and ZAR46 million have been designated against forecasted local currency denominated expenditures as a hedge of the variability of the US dollar amount of those expenditures caused by changes in currency exchange rates over the next four years. Hedged items are identified as the first stated quantity of dollars of forecasted expenditures in a future month. For a C\$533 million and A\$2,776 and ZAR46 million portion of the contracts, we have concluded that the hedges are 100% effective under FAS 133 because the critical terms (including notional amount and maturity date) of the hedged items and currency contracts are the same. For the remaining C\$53 million and A\$87 million portions, prospective and retrospective hedge effectiveness is assessed using the hypothetical derivative method under FAS 133. The prospective test involves comparing the effect of a theoretical shift in forward exchange rates on the fair value of both the actual and hypothetical derivative. The retrospective test involves comparing the effect of historic changes in exchange rates each period on the fair value of both the actual and hypothetical derivative using a dollar offset approach. The effective portion of changes in fair value of the currency contracts is recorded in OCI until the

forecasted expenditure impacts earnings. For expenditures capitalized to the cost of inventory, this is upon sale of inventory, and for capital expenditures, this is when amortization of the capital assets is recorded in earnings.

If it is probable that a hedged item will no longer occur in the originally specified time frame or within a further two-month period, the accumulated gains or losses in OCI for the associated currency contract are reclassified to earnings immediately. The identification of which currency contracts are associated with these hedged items uses a last-in, first-out ("LIFO") approach, based on the order in which currency contracts were originally designated in a hedging relationship.

## **Commodity Contracts**

### *Cash Flow Hedges*

Commodity contracts totaling 3,754 thousand barrels of diesel fuel and 18 million gallons of propane have been designated against forecasted purchases of the commodities for expected consumption at our mining operations. The contracts act as a hedge of the impact of variability in market prices on the cost of future commodity purchases over the next seven years. Hedged items are identified as the first stated quantity in millions of barrels/gallons of forecasted purchases in a future month. Prospective and retrospective hedge effectiveness is assessed using the hypothetical derivative method under FAS 133. The prospective test is based on regression analysis of the month-on-month change in fair value of both the actual derivative and a hypothetical derivative caused by actual historic changes in commodity prices over the last three years. The retrospective test involves comparing the effect of historic changes in commodity prices each period on the fair value of both the actual and hypothetical derivative using a dollar offset approach. The effective portion of changes in fair value of the commodity contracts is recorded in OCI until the forecasted transaction impacts earnings. The cost of commodity consumption is capitalized to the cost of inventory, and therefore this is upon the sale of inventory.

The terms of a series of copper-linked notes result in an embedded fixed-price forward copper sales contract that meets the definition of a derivative and must be separately accounted for. The resulting copper derivative has been designated against future copper sales as a cash flow hedge of the variability in market prices on those future sales. Hedged items are identified as the first stated quantity of pounds of forecasted sales in a future month. Prospective hedge effectiveness is assessed using a dollar offset method. The prospective assessment involves comparing the effect of theoretical shifts in forward copper prices on the fair value of both the actual hedging derivative and a hypothetical derivative. The retrospective assessment involves comparing the effect of historic changes in copper prices each period on the fair value of both the actual and hypothetical derivative. The effective portion of changes in fair value of the copper contracts is recorded in OCI until the forecasted copper sale impacts earnings.

If it is probable that a hedged item will no longer occur in the originally specified time frame, or within a further two-month period, the accumulated gains or losses in OCI for the associated contract are reclassified to earnings immediately. The identification of which commodity contracts are associated with these hedged items uses a LIFO approach, based on the order in which commodity contracts were originally designated in a hedging relationship.

### *Non-hedge Contracts*

Non-hedge fuel contracts are used to mitigate the risk of oil price changes on consumption at the Pierina, Eskay Creek and Lagunas Norte mines. On completion of regression analysis, we concluded that the contracts do not meet the "highly effective" criterion in FAS 133 due to currency and basis differences between contract prices and the prices charged to the mines by oil suppliers. Despite not qualifying as an accounting hedge, the contracts protect the Company to a significant extent from the effects of oil price changes.

## Derivative Assets and Liabilities

<sup>1</sup> On determining that certain forecasted capital expenditures were no longer likely to occur within two months of the originally specified time frame.

<sup>2</sup> Based on the fair value of hedge contracts at December 31, 2006.

## E Fair Value of Financial Instruments

Fair value is the value at which a financial instrument could be closed out or sold in a transaction with a willing and knowledgeable counterparty over a period of time consistent with our risk management or investment strategy. Fair value is based on quoted market prices, where available. If market quotes are not available, fair value is based on internally developed models that use market-based or independent information as inputs. These models could produce a fair value that may not be reflective of future fair value.

## Fair Value Information

|  | 2006            |                      | 2005            |                      |

- 1 Recorded at cost. Fair value approximates the carrying amounts due to the short-term nature and generally negligible credit losses.
- 2 Recorded at fair value. Quoted market prices are used to determine fair value.
- 3 Recorded at cost, adjusted for our share of income/loss and dividends of equity investees. Excludes the investment in Atacama Pty for which there is no readily determinable fair value.
- 4 Recorded at fair value based on internal valuation models that reflect forward market commodity prices, currency exchange rates and interest rates, and a discount factor that is based on market US dollar interest rates. If a forward market does not exist, we obtain broker-dealer quotations. Valuations assume all counterparties have an AA credit rating.
- 5 Long-term debt is generally recorded at cost except for obligations that are designated in a fair-value hedge relationship, which are recorded at fair value in periods where a hedge relationship exists. The fair value of long-term debt is calculated by discounting the future cash flows under a debt obligation by a discount factor that is based on US dollar market interest rates adjusted for our credit quality.
- 6 Recorded at fair value based on our period end closing market share price.

## F Credit Risk

Credit risk is the risk that a third party might fail to fulfill its performance obligations under the terms of a financial instrument. For cash and equivalents and accounts receivable, credit risk represents the carrying amount on the balance sheet, net of any overdraft positions.

For derivatives, when the fair value is positive, this creates credit risk. When the fair value of a derivative is negative, we assume no credit risk. In cases where we have a legally enforceable master netting agreement with a counterparty, credit risk exposure represents the net amount of the positive and negative fair values for similar types of derivatives. For a net negative amount, we regard credit risk as being zero. A net positive amount for a counterparty is a reasonable measure of credit risk when there is a legally enforceable master netting agreement. We mitigate credit risk by:

- entering into derivatives with high credit-quality counterparties;
- limiting the amount of exposure to each counterparty; and
- monitoring the financial condition of counterparties.

Location of credit risk is determined by physical location of the bank branch, customer or counterparty.

<sup>1</sup> The amounts presented reflect the net credit exposure after considering the effect of master netting agreements.

<sup>2</sup> For cash and equivalents and derivatives combined.

## G Risks Relating to the Use of Derivatives

By using derivatives, in addition to credit risk, we are affected by market risk and market liquidity risk. Market risk is the risk that the fair value of a derivative might be adversely affected by a change in commodity prices, interest rates, gold lease rates, or currency exchange rates, and that this in turn affects our financial condition. We manage market risk by establishing and monitoring parameters that limit the types and degree of market risk that may be undertaken. We mitigate this risk by establishing trading agreements with counterparties under which we are not required to post any collateral or make any margin calls on our derivatives. Our counterparties cannot require settlement solely because of an adverse change in the fair value of a derivative.

Market liquidity risk is the risk that a derivative cannot be eliminated quickly, by either liquidating it or by establishing an offsetting position. Under the terms of our trading agreements, counterparties cannot require us to immediately settle outstanding derivatives, except upon the occurrence of customary events of default such as covenant breaches, including financial covenants, insolvency or bankruptcy. We generally mitigate market liquidity risk by spreading out the maturity of our derivatives over time.

## 20 > ASSET RETIREMENT OBLIGATIONS

### Asset Retirement Obligations (AROs)

|  | 2006   | 2005   |
|--|--------|--------|
| At Jan. 1  | \$ 446 | \$ 367 |
| AROs acquired with Placer Dome                                   | 387    | —      |
| AROs arising in the period                                       | 27     | 47     |
| Impact of revisions to expected cash flows                       |        |        |
| Revisions to carrying amount of assets                           | (7)    | 29     |
| Recorded in earnings <sup>1</sup>                                | 53     | 15     |
| Settlements  |        |        |
| Cash payments  | (32)   | (30)   |
| Settlement gains   | (4)    | (3)    |
| AROs reclassified under “Liabilities of discontinued operations” | (16)   | —      |
| Accretion  | 39     | 21     |
| At Dec. 31   | 893    | 446    |
| Current portion  | (50)   | (37)   |
|  | \$ 843 | \$ 409 |

<sup>1</sup> In 2006, we recognized an increase of \$37 million for a change in estimate of the ARO at the Nickel Plate property in British Columbia, Canada. The adjustment was made on receipt of an environmental study that indicated a requirement to treat ground water for an extended period of time. The increase was recorded as a component of other expense (note 7D).

AROs arise from the acquisition, development, construction and normal operation of mining property, plant and equipment, due to government controls and regulations that protect the environment on the closure and reclamation of mining properties. The major parts of the carrying amount of AROs relate to tailings and heap leach pad closure/rehabilitation; demolition of buildings/mine facilities; ongoing water treatment; and ongoing care and maintenance of closed mines. The fair values of AROs are measured by discounting the expected cash flows using a discount factor that reflects the credit-adjusted risk-free rate of interest. We prepare estimates of the timing and amount of expected cash flows when an ARO is incurred. We update expected cash flows to reflect changes in facts and circumstances. The principal factors that can cause expected cash flows to change are: the construction of new processing facilities; changes in the quantities of material in reserves and a corresponding change in the life of mine plan; changing ore characteristics can impact required environmental protection measures and related costs; changes in water quality that impact the extent of water treatment required; and changes in laws and regulations governing the protection of the environment. When expected cash flows increase, the revised cash flows are discounted using a current discount factor whereas when expected cash flows decrease the additional cash flows are discounted using a historic discount factor, and then in both cases any change in the fair value of the ARO is recorded. We record the fair value of an ARO when it is incurred. At producing mines AROs incurred and changes in the fair value of AROs are recorded as an adjustment to the corresponding asset carrying amounts. At closed mines, any adjustment to the fair value of an ARO is charged directly to earnings. AROs are adjusted to reflect the passage of time (accretion) calculated by applying the discount factor implicit in the initial fair-value measurement to the beginning-of-period carrying amount of the AROs. For producing mines, accretion is recorded in the cost of goods sold each period. For development projects and closed mines, accretion is recorded as part of environmental remediation costs in other (income) expense. Upon settlement of an ARO, we record a gain or loss if the actual cost differs from the carrying amount of the ARO. Settlement gains are classified as environmental remediation costs in other (income) expense. Other environmental remediation costs that are not AROs as defined by FAS 143 are expensed as incurred (see note 7).

## 21 > OTHER NON-CURRENT LIABILITIES

| At Dec. 31                               | 2006   | 2005   |

|  | \$ 436 | \$ 208 |

## 22 > DEFERRED INCOME TAXES

### Recognition and Measurement

We record deferred income tax assets and liabilities where temporary differences exist between the carrying amounts of assets and liabilities in our balance sheet and their tax bases. The measurement and recognition of deferred income tax assets and liabilities takes into account: enacted rates that will apply when temporary differences reverse; interpretations of relevant tax legislation; tax planning strategies; estimates of the tax bases of assets and liabilities; and the deductibility of expenditures for income tax purposes. We recognize the effect of changes in our assessment of these estimates and factors when they occur. Changes in deferred income tax assets, liabilities and valuation allowances are allocated between net income and other

comprehensive income based on the source of the change.

Deferred income taxes have not been provided on the undistributed earnings of foreign subsidiaries, which are considered to be reinvested indefinitely outside Canada. The determination of the unrecorded deferred income tax liability is not considered practicable.

## Sources of Deferred Income Tax Assets and Liabilities

| At Dec. 31                              | 2006            | 2005         |

<sup>1</sup> Represents the gross amount of tax loss carry forwards translated at closing exchange rates at December 31, 2006.

<sup>2</sup> Represents the amounts deductible against future taxes payable in years when taxes payable exceed "minimum tax" as defined by United States tax legislation.

## Valuation Allowances

We consider the need to record a valuation allowance against deferred tax assets on a country-by-country basis, taking into account the effects of local tax law. A valuation allowance is not recorded when we conclude that sufficient positive evidence exists to demonstrate that it is more likely than not that a deferred tax asset will be realized. The main factors considered are:

- historic and expected future levels of future taxable income;
- opportunities to implement tax plans that affect whether tax assets can be realized; and
- the nature, amount and expected timing of reversal of taxable temporary differences.

Levels of future taxable income are mainly affected by: market gold and silver prices; forecasted future costs and expenses to produce gold reserves; quantities of proven and probable gold reserves; market interest rates and foreign currency exchange rates. If these factors or other circumstances change, we record an adjustment to the valuation allowances to reflect our latest assessment of the amount of deferred tax assets that will more likely than not be realized.

A deferred income tax asset totaling \$428 million has been recorded in Canada. This deferred tax asset primarily arose due to mark-to-market losses recorded for acquired Placer Dome derivative instruments. Projections of various sources of income indicate that the realizability of this deferred tax asset is more likely than not, and consequently no valuation allowance has been set up relating to this deferred tax asset at December 31, 2006.

A valuation allowance of \$211 million has been set up against certain deferred tax assets in the United States at December 31, 2006 (2005: \$209 million). The majority of this valuation allowance relates to AMT credits which have an unlimited carry forward period. A valuation allowance of \$217 million has been set up against deferred tax assets in Tanzania at December 31, 2006 (2005: \$204 million). A valuation allowance was historically recorded against these deferred tax assets due to uncertainty as to the ability to realize the assets. Increasing levels of future taxable income due to higher gold selling prices and other factors and circumstances may result in an adjustment to these valuation allowances in future periods. A valuation allowance of \$110 million has been set up at December 31, 2006 (2005: \$124 million) against tax loss carry forwards in Chile that exist in entities that have no present sources of income.

## Source of Changes in Deferred Tax Balances

## 23 > CAPITAL STOCK

### A Common Shares

Our authorized capital stock includes an unlimited number of common shares (issued 864,194,770 common shares); 9,764,929 First preferred shares Series A (issued nil); 9,047,619 Series B (issued nil); 1 Series C special voting share (issued 1); and 14,726,854 Second preferred shares Series A (issued nil).

We repurchased 4.47 million common shares in 2004 for \$95 million, at an average cost of \$21.20 per share. This resulted in a reduction of common share capital by \$35 million and a \$60 million charge (being the difference between the repurchase cost and the average historic book value of shares repurchased) to retained earnings.

In 2006, we declared and paid dividends in US dollars totaling \$0.22 per share (\$191 million) (2005: \$0.22 per share, \$118 million; 2004: \$0.22 per share, \$118 million).

### B Exchangeable Shares

In connection with a 1998 acquisition, Barrick Gold Inc. ("BGI"), issued 11.1 million BGI exchangeable shares, which are each exchangeable for 0.53 of a Barrick common share at any time at the option of the holder, and have essentially the same voting, dividend (payable in Canadian dollars), and other rights as 0.53 of a Barrick common share. BGI is a subsidiary that holds our interest in the Hemlo and Eskay Creek Mines.

At December 31, 2006, 1.4 million (2005 - 1.4 million) BGI exchangeable shares were outstanding, which are equivalent to 0.7 million Barrick common shares (2005 - 0.7 million common shares), and are reflected in the number of common shares outstanding. We have the right to require the exchange of each outstanding BGI exchangeable share for 0.53 of a Barrick common share. While there are exchangeable shares outstanding, we are required to present summary consolidated financial information relating to BGI.

### Summarized Financial Information for BGI

| For the years ended Dec. 31           | 2006   | 2005   | 2004    |
|---------------------------------------|--------|--------|---------|
| Total revenues and other income       | \$ 233 | \$ 181 | \$ 216  |
| Less: costs and expenses <sup>1</sup> | 215    | 186    | 287     |
| Income (loss) before taxes            | \$ 18  | \$ (5) | \$ (71) |
| Net income (loss)                     | \$ 33  | \$ 21  | \$ (41) |
| At Dec. 31                            |        | 2006   | 2005    |

|   | \$ 119  | \$ (31)  | \$ 69  |

**25 > STOCK-BASED COMPENSATION****A Stock Options**

Under Barrick’s stock option plan certain officers and key employees of the Corporation may purchase common shares at an exercise price that is equal to the closing share price on the day before the grant of the option. Stock options vest evenly over four years, beginning in the year after granting. Options granted in July 2004 and prior are exercisable over 10 years, whereas options granted since December 2004 are exercisable over 7 years. At December 31 2006, 13 million (2005: 12 million; 2004: 13 million) common shares, in addition to those currently outstanding, were available for granting options.

Total recorded compensation cost relating to stock options was \$27 million in 2006. Total intrinsic value relating to options exercised in 2006 was \$27 million (2005: \$22 million; 2004: \$12 million).

| Weighted average fair value per option            | \$ 9.42                | \$ 7.30                    | \$ 8.13              | \$ 6.87       | \$ 8.13              | \$ 6.87       |

<sup>1</sup> Different assumptions were used for the multiple stock option grants during the year.

<sup>2</sup> Stock option grants issued after September 30, 2005 were valued using the Lattice valuation model. The volatility and risk-free interest rate assumption varied over the expected term of these stock option grants.

<sup>3</sup> Excludes 2.7 million fully vested options issued on the acquisition of Placer Dome.

We changed the model used to value stock option grants from the Black-Scholes model to the Lattice valuation model for stock options granted after September 30, 2005. We believe the Lattice valuation model provides a more representative fair value because it incorporates more attributes of stock options such as employee turnover and voluntary exercise patterns of option holders. For options granted before September 30, 2005, fair value was determined using the Black-Scholes method. The expected volatility assumptions have been developed taking into consideration both historical and implied volatility of our US dollar share price. The risk-free rate for periods within the contractual life of the option is based on the US Treasury yield curve in effect at the time of the grant.

We use the straight-line method for attributing stock option expense over the vesting period. Stock option expense incorporates an expected forfeiture rate. The expected forfeiture rate is estimated based on historical forfeiture rates and expectations of future forfeitures rates. We make adjustments if the actual forfeiture rate differs from the expected rate.

Under the Black-Scholes model the expected term assumption takes into consideration assumed rates of employee turnover and represents the estimated average length of time stock options remain outstanding before they are either exercised or forfeited. Under the Lattice valuation model, the expected term assumption is derived from the option valuation model and is in part based on historical data regarding the exercise behavior of option holders based on multiple share-price paths. The Lattice model also takes into consideration employee turnover and voluntary exercise patterns of option holders.

As at December 31, 2006, there was \$39 million (2005: \$56 million; 2004: \$69 million) of total unrecognized compensation cost relating to unvested stock options. We expect to recognize this cost over a weighted average period of 2 years (2005: 2 years; 2004: 2 years).

For years prior to 2006, we utilized the intrinsic value method of accounting for stock options, which resulted in no compensation expense. If compensation expense had been determined in accordance with the fair value provisions of SFAS No. 123 pro-forma net income and net income per share would have been as follows:

### Stock Option Expense

For the years ended Dec. 31  
(\$ millions, except per share amounts in  
dollars)

|                         | 2005    | 2004    |
|-------------------------|---------|---------|
| Pro forma effects       |         |         |

| As reported — diluted   | \$ 0.75 | \$ 0.46 |
| Pro forma <sup>1</sup>  | \$ 0.70 | \$ 0.41 |

<sup>1</sup> Basic and diluted.

### B Restricted Share Units (RSUs) and Deferred Share Units (DSUs)

In 2005, following a review of various types of stock-based compensation arrangements; we introduced a new stock-based compensation plan for employees. Under the new plan, selected employees are granted restricted share units (RSUs). Each RSU has a value equal to one Barrick common share. RSUs vest and will be settled in cash on the third anniversary of the grant date. Additional RSUs are credited to reflect dividends paid on Barrick common shares. We expect that the volume of options granted each year will decline compared to historical volumes, with a greater number of RSUs issued instead.

RSUs are recorded at fair value on the grant date, with a corresponding amount recorded as deferred compensation that is amortized on a straight-line basis over the vesting period. Changes in the fair value of the RSUs are recorded, with a corresponding adjustment to deferred compensation. Compensation expense for 2006 was \$6 million (2005: \$2 million; 2004: \$4 million). At December 31, 2006, the weighted average remaining contractual life of RSUs was 2.5 years.

Under our DSU plan, Directors must receive a specified portion of their basic annual retainer in the form of DSUs, with the option to elect to receive 100% of such retainer in DSUs. Each DSU has the same value as one Barrick common share. DSUs must be retained until the Director leaves the Board, at which time the cash value of the DSUs will be paid out. Additional DSUs are credited to reflect dividends paid on Barrick common shares. DSUs are recorded at fair value on the grant date and are adjusted for changes in fair value. The fair value of amounts granted each period together with changes in fair value are expensed.

## DSU and RSU Activity

| Change in value            | —                   | —                        | —                   | 2.6                      |
| At Dec. 31, 2006           | 69                  | \$ 2.1                   | 1,354               | \$ 41.6                  |

<sup>1</sup> In January 2006, under our RSU plan, 18,112 restricted share units were converted to 72,448 stock options, and 9,395 units were forfeited.

## 26 > POST-RETIREMENT BENEFITS

### A Defined Contribution Pension Plans

Certain employees take part in defined contribution employee benefit plans. We also have a retirement plan for certain officers of the Company, under which we contribute 15% of the officer's annual salary and bonus. Our share of contributions to these plans, which is expensed in the year it is earned by the employee, was \$36 million in 2006, \$20 million in 2005 and \$19 million in 2004.

### B Defined Benefit Pension Plans

We have qualified defined benefit pension plans that cover certain of our United States, Canadian and Australian employees and provide benefits based on employees' years of service. Through the acquisition of Placer Dome, we acquired pension plans in the United States, Canada and Australia. Our policy is to fund the amounts necessary on an actuarial basis to provide enough assets to meet the benefits payable to plan members. Independent trustees administer assets of the plans, which are invested mainly in fixed-income and equity securities. On December 31, 2004, one of our qualified defined benefit plans was amended to freeze benefit accruals for all employees, resulting in a curtailment gain of \$2 million. On January 31, 2006, actuarial assumptions were amended for one of our qualified defined benefit plans in Canada; no curtailment gain or loss resulted. On June 30, 2006, one of our plans in Canada was partially wound-up; no curtailment gain or loss resulted. On December 31, 2006, one of our qualified defined benefit plans was amended to freeze benefits in the United States accruals for all employees, resulting in a curtailment gain of \$8 million.

As well as the qualified plans, we have non-qualified defined benefit pension plans covering certain employees and former directors of the Company. An irrevocable trust ("rabbi trust") was set up to fund these plans. The fair value of assets held in this trust was \$21 million in 2006 (2005: \$21 million), and is recorded in our consolidated balance sheet under available-for-sale securities.

Actuarial gains and losses arise when the actual return on plan assets differs from the expected return on plan assets for a period, or when the expected and actuarial accrued benefit obligations differ at the end of the year. We amortize actuarial gains and losses over the average remaining life expectancy of plan participants, in excess of a 10% corridor.

### Pension Expense (Credit)

| For the years ended Dec. 31    | 2006    | 2005    | 2004    |
|--------------------------------|---------|---------|---------|

## Projected Benefit Obligation (PBO)

| For the years ended Dec. 31                              | 2006    | 2005    |
|--|---------|---------|
| Balance at Jan. 1  | \$ 224  | \$ 218  |
| Increase for plans assumed on acquisition of Placer Dome | 191     | —       |
| Service cost   | 4       | —       |
| Interest cost  | 22      | 13      |
| Actuarial (gains) losses                                 | (7)     | 17      |
| Benefits paid  | (37)    | (24)    |
| Curtailments   | (8)     | —       |
| Balance at Dec. 31                                       | \$ 389  | \$ 224  |
| Funded status <sup>1</sup>                               | \$ (88) | \$ (58) |
| Actuarial losses   | n/a     | 29      |
| Net benefit liability recorded                           | n/a     | \$ (29) |
| ABO <sup>2,3</sup>                                       | \$ 386  | \$ 222  |

<sup>1</sup> Represents the fair value of plan assets less projected benefit obligations. Plan assets exclude investments held in a rabbi trust that are recorded separately on our balance sheet under Investments (fair value \$21 million at December 31, 2006). In the year ending December 31, 2007, we do not expect to make any further contributions.

<sup>2</sup> For 2006, we used a measurement date of December 31, 2006 to calculate accumulated benefit obligations.

<sup>3</sup> Represents the accumulated benefit obligation ("ABO") for all plans. The ABO for plans where the PBO exceeds the fair value of plan assets was \$110 million (2005: \$222 million).

## Pension Plan Assets/Liabilities

| At Dec. 31                              | 2006    |
|---|---------|
| Non-current assets                      | \$ 5    |
| Current liabilities                     | (8)     |
| Non-current liabilities                 | (85)    |
| Other comprehensive income <sup>1</sup> | 6       |
|   | \$ (82) |

<sup>1</sup> Amounts represent actuarial losses.

The projected benefit obligation and fair value of plan assets for pension plans with a projected benefit obligation in excess of plan assets at December 31, 2006 and 2005 were as follows:

| For the years ended Dec. 31               | 2006   | 2005   |
|---|--------|--------|
| Projected benefit obligation, end of year | \$ 111 | \$ 224 |
| Fair value of plan assets, end of year    | \$ 62  | \$ 166 |

The projected benefit obligation and fair value of plan assets for pension plans with an accumulated benefit obligation in excess of plan assets at December 31, 2006 and 2005 were as follows:

| For the years ended Dec. 31                 | 2006   | 2005   |
|---|--------|--------|
| Projected benefit obligation, end of year   | \$ 111 | \$ 224 |
| Accumulated benefit obligation, end of year | \$ 110 | \$ 222 |
| Fair value of plan assets, end of year      | \$ 62  | \$ 166 |

## Effect of Adopting FAS 158

We adopted provisions of FAS 158 in 2006 (see note 2E). FAS 158 requires employers to fully recognize the obligations for defined benefit pension and other post-retirement plans in their financial statements; past standards only required note disclosure. FAS 158 requires recognition of the funded status of a benefit plan on the balance sheet, which is measured as the difference between the fair value of plan assets and the benefit obligation, as at the fiscal year-end. For pension plans, the benefit obligation is the projected benefit obligation; for other post-retirement benefits, the benefit obligation is the accumulated post-retirement benefit obligation.

| For the year ended December 31, 2006 <sup>1</sup> | Pre-FAS 158 | Adjustments | Post-FAS 158 |
|---|-------------|-------------|--------------|
| Liability for plans                               |             |             |              |
| Pension plans                                     | \$ 82       | \$ 6        | \$ 88        |
| Other post-retirement benefits                    | 31          | 5           | 36           |
| Additional minimum liability <sup>2</sup>         | 13          | (13)        | —            |
| Total recognized benefit liability                | \$ 126      | \$ (2)      | \$ 124       |

|                       |    |   |    |    |
|-----------------------|----|---|----|----|
| Liability for plans   |    |   |    |    |
| Net actuarial loss    | \$ | — | \$ | 9  |
| Transition obligation |    | — |    | 2  |
|                       | \$ | — | \$ | 11 |
|                       |    |   | \$ | 11 |

<sup>1</sup> Includes incremental effect for other post-retirement benefits.

<sup>2</sup> Elimination of historically recorded amounts in OCI.

### Expected Future Benefit Payments

| 2007        |  | \$ | 33  |
| 2008        |  |    | 28  |
| 2009        |  |    | 27  |
| 2010        |  |    | 36  |
| 2011        |  |    | 27  |
| 2012 - 2016 |  | \$ | 134 |

### D Actuarial Assumptions

For the years ended Dec. 31

|                                    | 2006        | 2005  | 2004  |
|------------------------------------|-------------|-------|-------|
| Discount rate <sup>1</sup>         |             |       |       |
| Benefit obligation                 | 4.40%-5.90% | 5.50% | 5.50% |
| Pension cost                       | 4.40%-5.90% | 5.50% | 6.25% |
| Return on plan assets <sup>1</sup> | 7.00%-7.25% | 7.00% | 7.00% |
| Wage increases                     | 3.5%-5.00%  | 5.00% | 5.00% |

<sup>1</sup> Effect of a one-percent change: Discount rate: \$33 million decrease in ABO and \$2 million increase in pension cost; Return on plan assets: \$3 million decrease in pension cost.

Pension plan assets, which consist primarily of fixed-income and equity securities, are valued using current market quotations. Plan obligations and the annual

pension expense are determined on an actuarial basis and are affected by numerous assumptions and estimates including the market value of plan assets, estimates of the expected return on plan assets, discount rates, future wage increases and other assumptions. The discount rate, assumed rate of return on plan assets and wage increases are the assumptions that generally have the most significant impact on our pension cost and obligation.

The discount rate for benefit obligation and pension cost purposes is the rate at which the pension obligation could be effectively settled. This rate was developed by matching the cash flows underlying the pension obligation with a spot rate curve based on the actual returns available on high-grade (Moody's Aa) US corporate bonds. Bonds included in this analysis were restricted to those with a minimum outstanding balance of \$50 million. Only non-callable bonds, or bonds with a make-whole provision, were included. Finally, outlying bonds (highest and lowest 10%) were discarded as being non-representative and likely to be subject to a change in investment grade. The resulting discount rate from this analysis was rounded to the nearest 25 basis points. The procedure was applied separately for pension and post-retirement plan purposes, and produced the same rate in each case.

The assumed rate of return on assets for pension cost purposes is the weighted average of expected long-term asset return assumptions. In estimating the long-term rate of return for plan assets, historical markets are studied and long-term historical returns on equities and fixed-income investments reflect the widely accepted capital market principle that assets with higher volatility generate a greater return over the long run. Current market factors such as inflation and interest rates are evaluated before long-term capital market assumptions are finalized.

Wage increases reflect the best estimate of merit increases to be provided, consistent with assumed inflation rates.

## E Other Post-retirement Benefits

We provide post-retirement medical, dental, and life insurance benefits to certain employees. We use the corridor approach in the accounting for post-retirement benefits. Actuarial gains and losses resulting from variances between actual results and economic estimates or actuarial assumptions are deferred and amortized over the average remaining life expectancy of participants when the net gains or losses exceed 10% of the accumulated post-retirement benefit obligation.

### Other Post-retirement Benefits Expense

| For the years ended Dec. 31 | 2006 | 2005 | 2004 |
|-----------------------------|------|------|------|
| Interest cost               | \$ 2 | \$ 2 | \$ 2 |

| Benefits paid               | (3)  | (4)  | (2)  |
| Balance at Dec. 31          | \$ — | \$ — | \$ — |

### Accumulated Post-retirement Benefit Obligation (APBO)

| For the years ended Dec. 31            | 2006  | 2005    | 2004    |
|--|-------|---------|---------|
| Balance at Jan. 1                      | \$ 39 | \$ 29   | \$ 24   |
| Interest cost                          | 2     | 2       | 2       |
| Actuarial losses                       | (1)   | 11      | 5       |
| Benefits paid                          | (3)   | (3)     | (2)     |
| Balance at Dec. 31                     | \$ 37 | \$ 39   | \$ 29   |
| Funded status                          | (37)  | (38)    | (29)    |
| Unrecognized net transition obligation | n/a   | 1       | —       |
| Unrecognized actuarial losses          | n/a   | 6       | 1       |
| Net benefit liability recorded         | n/a   | \$ (31) | \$ (28) |

### Other Post-retirement Assets/Liabilities

| For the year ended Dec. 31             | 2006   |
|--|--------|
| Current liability                      | \$ (3) |
| Non-current liability                  | (33)   |
| Accumulated other comprehensive income | 5      |
|  | \$(31) |

Amounts recognized in accumulated other comprehensive income consist of: <sup>1</sup>

| For the year ended Dec. 31 | 2006 |
|----------------------------|------|
| Net actuarial loss (gain)  | \$ 3 |

|                               |      |
|-------------------------------|------|
| Transition obligation (asset) | 2    |
|                               | \$ 5 |

<sup>1</sup> The estimated amounts that will be amortized into net periodic benefit cost in 2007.

We have assumed a health care cost trend of 10% in 2007, decreasing ratable to 5% in 2012 and thereafter. The assumed health care cost trend had a minimal effect on the amounts reported. A one percentage point change in the assumed health care cost trend rate at December 31, 2006 would have increased the post-retirement obligation by \$4 million or decreased the post-retirement benefit obligation by \$3 million and

would have had no significant effect on the benefit expense for 2006.

## Expected Future Benefit Payments

| 2010        |    | 3  |
| 2012        |    | 3  |
| 2012 - 2016 | \$ | 14 |

## 27 > LITIGATION AND CLAIMS

Certain conditions may exist as of the date the financial statements are issued, which may result in a loss to the Company but which will only be resolved when one or more future events occur or fail to occur. In assessing loss contingencies related to legal proceedings that are pending against us or unasserted claims that may result in such proceedings, the Company and its legal counsel evaluate the perceived merits of any legal proceedings or unasserted claims as well as the perceived merits of the amount of relief sought or expected to be sought.

If the assessment of a contingency suggests that a loss is probable, and the amount can be reliably estimated, then a loss is recorded. When a contingent loss is not probable but is reasonably possible, or is probable but the amount of loss cannot be reliably estimated, then details of the contingent loss are disclosed. Loss contingencies considered remote are generally not disclosed unless they involve guarantees, in which case we disclose the nature of the guarantee. Legal fees incurred in connection with pending legal proceedings are expensed as incurred.

### Wagner Complaint

On June 12, 2003, a complaint was filed against Barrick and several of its current or former officers in the U.S. District Court for the Southern District of New York. The complaint is on behalf of Barrick shareholders who purchased Barrick shares between February 14, 2002 and September 26, 2002. It alleges that Barrick and the individual defendants violated U.S. securities laws by making false and misleading statements concerning Barrick's projected operating results and earnings in 2002. The complaint seeks an unspecified amount of damages. Other parties filed several other complaints, making the same basic allegations against the same defendants. In September 2003, the cases were consolidated into a single action in the Southern District of New York. The plaintiffs filed a Third Amended Complaint on January 6, 2005. On May 23, 2005, Barrick filed a motion to dismiss part of the Third Amended Complaint. On January 31, 2006, the Court issued an order granting in part and denying in part Barrick's motion to dismiss. Both parties moved for reconsideration of a portion of the Court's January 31, 2006 Order. On December 12, 2006, the Court issued its order denying the parties' motions for reconsideration. The Court denied both parties' motions. Discovery is ongoing. We intend to defend the action vigorously. No amounts have been accrued for any potential loss under this complaint.

### Wilcox Complaint

On September 8, 2004, two of our U.S. subsidiaries, Homestake Mining Company of California ("Homestake California") and Homestake Mining Company ("Homestake") were served with a First Amended Complaint by persons alleging to be current or former residents of a rural area near the former Grants Uranium Mill. The Complaint, which was filed in the U.S. District Court for the District of New Mexico, named Homestake and Homestake California, along with an unspecified number of unidentified defendants, as defendants. The plaintiffs allege that they have suffered a variety of physical, emotional and financial injuries as a result of exposure to radioactive and other hazardous substances. The Complaint seeks an unspecified amount of damages. On November 25, 2005, the Court issued an order granting in part and denying in part a motion to dismiss the claim. The Court granted the motion and dismissed plaintiffs' claims based on strict and absolute liability and ruled that plaintiffs' state law claims are pre-empted by the Price-Anderson Act. Plaintiffs filed a Third Amended Complaint on April 10, 2006, which increased the number of plaintiffs from 26 to 28 and omitted the claims previously dismissed by the Court, but otherwise did not materially alter the claims asserted. An Initial Scheduling Order has been issued by the Court. We intend to defend the action vigorously. No amounts have been accrued for any potential loss under this complaint.

### Cowal Mine

Opponents of Barrick's Cowal mine continue to pursue various claims, legal proceedings and complaints against the mine and the Company's compliance with its permits and licenses. Barrick has and will continue to vigorously defend such actions. No amounts have been accrued for any potential loss under these complaints.

### Marinduque Complaint

Placer Dome has been named the sole defendant in a Complaint filed on October 4, 2005, by the Provincial Government of Marinduque, an island province of the Philippines ("Province"), with the District Court in Clark County, Nevada. The action was removed to the Nevada Federal District Court on motion of Placer Dome. The Complaint asserts that Placer Dome is responsible for alleged environmental degradation with consequent economic damages and impacts to the environment in the vicinity of the

operated by Marcopper Mining Corporation (“Marcopper”). Placer Dome indirectly owned a minority shareholding of 39.9% in Marcopper until the divestiture of its shareholding in 1997. The Province seeks “to recover damages for injuries to the natural, ecological and wildlife resources within its territory”, but “does not seek to recover damages for individual injuries sustained by its citizens either to their persons or their property”. In addition to damages for injury to natural resources, the Province seeks compensation for the costs of restoring the environment, an order directing Placer Dome to undertake and complete “the remediation, environmental cleanup, and balancing of the ecology of the affected areas,” and payment of the costs of environmental monitoring. The Complaint addresses the discharge of mine tailings into Calancan Bay, the 1993 Maguila-guila dam breach, the 1996 Boac river tailings spill, and alleged past and continuing damage from acid rock drainage.

At the time of the amalgamation of Placer Dome and Barrick Gold Corporation, a variety of motions were pending before the District Court, including motions to dismiss the action for lack of personal jurisdiction and for *forum non conveniens* (improper choice of forum). However, on June 29, 2006, the Province filed a Motion to join Barrick Gold Corporation as an additional named Defendant and for leave to file a Third Amended Complaint. The Company has filed oppositions to these new motions from the Province. The District Court has not yet ruled on these motions. On November 13, 2006, the District Court issued an order permitting the Province to conduct ‘limited’ jurisdictional discovery. The Company has interposed objections to the scope of the discovery that the Province has requested. The District Court has not yet ruled on the objections. We will challenge the claims of the Province on various grounds and otherwise vigorously defend the action. No amounts have been accrued for any potential loss under this complaint.

### **Calancan Bay (Philippines) Complaint**

On July 23, 2004, a complaint was filed against Marcopper and Placer Dome Inc. (“PDI”) in the Regional Trial Court of Boac, on the Philippine island of Marinduque, on behalf of a putative class of fishermen who reside in the communities around Calancan Bay, in northern Marinduque. The complaint alleges injuries to health and economic damages to the local fisheries resulting from the disposal of mine tailings from the Marcopper mine. The total amount of damages claimed is approximately US\$900 million.

On October 16, 2006, the court granted the plaintiffs’ application for indigent status, allowing the case to proceed without payment of filing fees. On January 17, 2007, the Court issued a summons to Marcopper and PDI. To date, we are unaware of any attempts to serve the summons on PDI, nor do we believe that PDI is properly amenable to service in the Philippines. If service is attempted, the Company intends to defend the action vigorously.

### **Pakistani Constitutional Litigation**

On November 28, 2006, a Constitutional Petition was filed in the High Court of Balochistan by three Pakistan citizens against: Barrick, the governments of Balochistan and Pakistan, the Balochistan Development Authority (“BDA”), Tethyan Copper Company (“TCC”), Antofagasta Plc (“Antofagasta”), Muslim Lakhani and BHP (Pakistan) Pvt Limited (“BHP”).

The Petition alleges, among other things, that the entry by the BDA into the 1993 Joint Venture Agreement (“JVA”) with BHP to facilitate the exploration of the Reko Diq area and the grant of related exploration licenses were illegal and that the subsequent transfer of the interests of BHP in the JVA and the licenses to TCC was also illegal and should therefore be set aside. Barrick currently indirectly holds 50% of the shares of TCC, with Antofagasta indirectly holding the other 50%.

On December 27, 2006, the Court issued an order providing that the respondents may continue to conduct mining exploration in the area, but that no change shall be made in the ownership of TCC without the consent of the provincial government and prior intimation to the Court. The original order of the Court, which was granted on November 28, 2006, provided that status quo in respect of the mining lease (of which there are none) be maintained. The matter was adjourned to March 20, 2007 at which time it is expected to be heard by the Court. Barrick intends to defend this action vigorously.

### **NovaGold Litigation**

On August 24, 2006, during the pendency of Barrick’s unsolicited bid for NovaGold Resources Inc., NovaGold filed a complaint against Barrick in the United States District Court for the District of Alaska. The complaint has been amended on several occasions with the most recent amendment having been filed in January 2007. The complaint, as amended, seeks a declaration that Barrick will be unable to satisfy the requirements of the Mining Venture Agreement between NovaGold and Barrick which would allow Barrick to increase its interest in the Donlin Creek joint venture from 30% to 70%. NovaGold also asserts that Barrick breached its fiduciary and contractual duties to NovaGold, including its duty of good faith and fair dealing, by misusing confidential information of NovaGold regarding NovaGold’s Galore Creek project in British Columbia. NovaGold seeks declaratory relief, an injunction and an unspecified amount of damages. Barrick’s Motion to Dismiss

NovaGold's amended complaint was heard on February 9, 2007, and is currently pending before the Court.

On August 11, 2006, NovaGold filed a complaint against Barrick in the Supreme Court of British Columbia. The complaint asserts that in the course of discussions with NovaGold of a potential joint venture for the development of the Galore Creek project, Barrick misused confidential information of NovaGold regarding that project to, among other things, wrongfully acquire Pioneer Metals, a company that holds mining claims adjacent to NovaGold's project. NovaGold asserts that Barrick breached fiduciary duties owed to NovaGold, intentionally and wrongfully interfered with NovaGold's interests and has been unjustly enriched. NovaGold seeks a constructive trust over the shares in Pioneer acquired by Barrick and an accounting for any profits of Barrick's conduct, as well as an unspecified amount of damages. To date, NovaGold has taken no substantive action to pursue this complaint.

Barrick intends to vigorously defend both of the NovaGold complaints. No amounts have been accrued for any potential loss under these complaints.

## 28 > UNINCORPORATED JOINT VENTURES

Our major interests in unincorporated joint ventures where we share joint control with our partners and use the proportionate consolidation method are a 50% interest in the Kalgoorlie mine in Australia; a 50% interest in the Round Mountain mine in the United States; a 50% interest in the Hemlo mine in Canada; and a 33% interest in the Marigold mine in the United States. In first quarter 2006 we also acquired interests in similar unincorporated joint ventures through the acquisition of Placer Dome, including: a 60% interest in the Cortez Mine; a 75% interest in the Turquoise Ridge mine, both in the United States; and a 75% interest in the Porgera mine in Papua New Guinea.

### SUMMARY FINANCIAL INFORMATION (100%) Income Statement and Cash Flow Information

| For the years ended Dec. 31         | 2006     | 2005     | 2004     |
|-------------------------------------|----------|----------|----------|
| Revenues                            | \$ 1,776 | \$ 1,009 | \$ 946   |
| Costs and expenses                  | (1,447)  | (796)    | (702)    |

(1) Resources, which are not reserves, do not have demonstrated economic viability.

(2) See accompanying footnote #1.

## MINERAL RESERVES AND RESOURCES NOTES

1. Mineral reserves (“reserves”) and mineral resources (“resources”) have been calculated as at December 31, 2006 in accordance with National Instrument 43-101 as required by Canadian securities regulatory authorities. For United States reporting purposes, Industry Guide 7, (under the Securities and Exchange Act of 1934), as interpreted by Staff of the SEC, applies different standards in order to classify mineralization as a reserve. Accordingly, for U.S. reporting purposes, 1.88 million ounces of the Cortez reserve, Buzwagi and Pueblo Viejo are classified as mineralized material. In addition, while the terms “measured”, “indicated” and “inferred” mineral resources are required pursuant to National Instrument 43-101, the U.S. Securities and Exchange Commission does not recognize such terms. Canadian standards differ significantly from the requirements of the U.S. Securities and Exchange Commission, and mineral resource information contained herein is not comparable to similar information regarding mineral reserves disclosed in accordance with the requirements of the U.S. Securities and Exchange Commission. U.S. investors should understand that “inferred” mineral resources have a great amount of uncertainty as to their existence and great uncertainty as to their economic and legal feasibility. In addition, U.S. investors are cautioned not to assume that any part or all of Barrick’s mineral resources constitute or will be converted into reserves. Calculations have been prepared by employees of Barrick, its joint venture partners or its joint venture operating companies, as applicable, under the supervision of Jacques McMullen, Vice President, Metallurgy and Process Development of Barrick, Rick Allan, Director — Engineering and Mining Support of Barrick, and Rick Sims, Manager Corporate Reserves of Barrick. Reserves have been calculated using an assumed long-term average gold price of \$US 475 (\$Aus. 640) per ounce, a silver price of \$US 8.50 per ounce, a copper price of \$US 1.50 per pound and exchange rates of \$1.21 \$Can/\$US and \$0.74 \$US/\$Aus. Reserves at the Kalgoorlie property assumed a gold price of \$US 500 (\$Aus. 675). Copper reserves at the Osborne property assumed a copper price of \$US 1.75 per pound. Reserve calculations incorporate current and/or expected mine plans and cost levels at each property. Varying cut-off grades have been used depending on the mine and type of ore contained in the reserves. Barrick’s normal data verification procedures have been employed in connection with the calculations. Resources as at December 31, 2006 have been estimated using varying cut-off grades, depending on both the type of mine or project, its maturity and ore types at each property. For a breakdown of reserves and resources by category and for a more detailed description of the key assumptions, parameters and methods used in calculating Barrick’s reserves and resources, see Barrick’s most recent Annual Information Form/Form 40-F on file with Canadian provincial securities regulatory authorities and the U.S. Securities and Exchange Commission.

2. Gold and copper resource estimates for Reko Diq have been prepared by employees and consultants of Tethyan Copper Company Limited (“Tethyan”) in accordance with the JORC Code. For additional information related to Reko Diq resources reported by Tethyan, including related assumptions, see Tethyan’s press release dated January 11, 2006 and its 2005 Fourth Quarter Report. Such resource estimates have been reviewed by Jacques McMullen, Vice President, Metallurgy and Process Development of Barrick, Rick Allan, Director — Engineering and Mining Support of Barrick, and Rick Sims, Manager Corporate Reserves of Barrick. The inferred and indicated mineral resource amounts reported under the JORC Code are substantially similar to the inferred and indicated mineral resource amounts that would be reported in accordance with National Instrument 43-101.

3. 2005 “Other” resources have been restated to reflect the sale of the Jeronimo deposit in 2006, representing 559,000 ounces in 2005, and the separate presentation of the South Arturo deposit, representing 158,000 ounces in 2005.

**CAUTIONARY STATEMENT ON FORWARD-LOOKING INFORMATION**

Certain information included in this Press Release, including any information as to our future financial or operating performance and other statements that express management's expectations or estimates of future performance, constitute "forward-looking statements". The words "expect", "will", "intend", "estimate" and similar expressions identify forward-looking statements. Forward-looking statements are necessarily based upon a number of estimates and assumptions that, while considered reasonable by management, are inherently subject to significant business, economic and competitive uncertainties and contingencies. The Company cautions the reader that such forward-looking statements involve known and unknown risks, uncertainties and other factors that may cause the actual financial results, performance or achievements of Barrick to be materially different from the Company's estimated future results, performance or achievements expressed or implied by those forward-looking statements and the forward-looking statements are not guarantees of future performance. These risks, uncertainties and other factors include, but are not limited to: changes in the worldwide price of gold, copper or certain other commodities (such as silver, fuel and electricity) and other currencies; changes in U.S. dollar interest rates or gold lease rates; risks arising from holding derivative instruments; ability to successfully integrate acquired assets; legislative, political or economic developments in the jurisdictions in which the Company carries on business; operating or technical difficulties in connection with mining or development activities; employee relations; the speculative nature of exploration and development, including the risks of diminishing quantities or grades of reserves, adverse changes in our credit rating, contests over title to properties, particularly title to undeveloped properties; and the risks involved in the exploration, development and mining business. These factors are discussed in greater detail in the Company's most recent Form 40-F/Annual Information Form on file with the US Securities and Exchange Commission and Canadian provincial securities regulatory authorities.

The Company disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as required by applicable law.
